

Location Entry Codes

As part of CIE's continual commitment to maintaining best practice in assessment, CIE uses different variants of some question papers for our most popular assessments with large and widespread candidature. The question papers are closely related and the relationships between them have been thoroughly established using our assessment expertise. All versions of the paper give assessment of equal standard.

The content assessed by the examination papers and the type of questions is unchanged.

This change means that for this component there are now two variant Question Papers, Mark Schemes and Principal Examiner's Reports where previously there was only one. For any individual country, it is intended that only one variant is used. This document contains both variants which will give all Centres access to even more past examination material than is usually the case.

The diagram shows the relationship between the Question Papers, Mark Schemes and Principal Examiners' Reports that are available.

Question Paper	Mark Scheme	Principal Examiner's Report
Introduction	Introduction	Introduction
First variant Question Paper	First variant Mark Scheme	First variant Principal Examiner's Report
Second variant Question Paper	Second variant Mark Scheme	Second variant Principal Examiner's Report

Who can I contact for further information on these changes?

Please direct any questions about this to CIE's Customer Services team at:

international@cie.org.uk

The titles for the variant items should correspond with the table above, so that at the top of the first page of the relevant part of the document and on the header, it has the words:

- First variant Question Paper / Mark Scheme / Principal Examiner's Report

or

- Second variant Question Paper / Mark Scheme / Principal Examiner's Report

as appropriate.

Paper 3 (Extended)

May/June 2009

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

A copy of the Periodic Table is printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part questions.

This document consists of **15** printed pages and **1** blank pages.

1 Some grass is crushed and mixed with the solvent, propanone. The colour pigments are extracted to give a deep green solution.

(a) (i) Draw a labelled diagram to describe how you could show that there is more than one coloured pigment in the green solution.

[3]

(ii) Given a pure sample of chlorophyll, how could you show that the green solution from the grass contained chlorophyll?

.....
.....
.....
..... [2]

(b) Explain the role of chlorophyll in green plants.

.....
.....
.....
.....
..... [3]

[Total: 8]

- 2 The results of experiments on electrolysis using inert electrodes are given in the table.

Complete the table; the first line has been completed as an example.

For
Examiner's
Use

electrolyte	change at negative electrode	change at positive electrode	change to electrolyte
molten lead(II) bromide	lead formed	bromine formed	used up
.....	potassium formed	iodine formed	used up
dilute aqueous sodium chloride
aqueous copper(II) sulfate
.....	hydrogen formed	bromine formed	potassium hydroxide formed

[Total: 8]

3 The following is a list of the electron distributions of atoms of unknown elements.

For
Examiner's
Use

element	electron distribution
A	2,5
B	2,8,4
C	2,8,8,2
D	2,8,18,8
E	2,8,18,8,1
F	2,8,18,18,7

(a) Choose an element from the list for each of the following descriptions.

- (i) It is a noble gas.
- (ii) It is a soft metal with a low density.
- (iii) It can form a covalent compound with element **A**.
- (iv) It has a giant covalent structure similar to diamond.
- (v) It can form a negative ion of the type X^{3-} [5]

(b) Elements **C** and **F** can form an ionic compound.

- (i) Draw a diagram that shows the formula of this compound, the charges on the ions and the arrangement of the valency electrons around the negative ion.
Use **o** to represent an electron from an atom of **C**.
Use **x** to represent an electron from an atom of **F**.

[3]

(ii) Predict **two** properties of this compound.

.....

.....

..... [2]

[Total: 10]

- 4 The reactivity series of metals given below contains both familiar and unfamiliar elements. For most of the unfamiliar elements, which are marked *, their common oxidation states are given.

For
Examiner's
Use

* barium	Ba
* lanthanum	La (+3)
magnesium	
zinc	
* chromium	Cr (+2), (+3), (+6)
iron	
copper	
* palladium	(+2)

Choose metal(s) from the above list to answer the following questions.

- (i) Which **two** metals would not react with dilute hydrochloric acid?

..... [2]

- (ii) Which **two** unfamiliar metals (*) would react with cold water?

..... [2]

- (iii) What is the oxidation state of barium?

..... [1]

- (iv) Name an unfamiliar metal (*) whose oxide cannot be reduced by carbon.

..... [1]

- (v) Why should you be able to predict that metals such as iron and chromium have more than one oxidation state?

.....
..... [1]

[Total: 7]

5 Insoluble salts are made by precipitation.

(a) A preparation of the insoluble salt calcium fluoride is described below.

To 15 cm³ of aqueous calcium chloride, 30 cm³ of aqueous sodium fluoride is added. The concentration of both solutions is 1.00 mol / dm³. The mixture is filtered and the precipitate washed with distilled water. Finally, the precipitate is heated in an oven.

(i) Complete the equation.

(ii) Why is the volume of sodium fluoride solution double that of the calcium chloride solution?

.....
..... [1]

(iii) Why is the mixture washed with distilled water?

.....
..... [1]

(iv) Why is the solid heated?

.....
..... [1]

(b) The formulae of insoluble compounds can be found by precipitation reactions.

To 12.0 cm³ of an aqueous solution of the nitrate of metal T was added 2.0 cm³ of aqueous sodium phosphate, Na₃PO₄. The concentration of both solutions was 1.00 mol/dm³. When the precipitate had settled, its height was measured.

For
Examiner's
Use

The experiment was repeated using different volumes of the phosphate solution. The results are shown on the following graph.

What is the formula of the phosphate of metal T? Give your reasoning.

.....

.....

.....

..... [3]

[Total: 8]

6 Ammonia is manufactured by the Haber process.

(a) (i) Name the raw materials from which nitrogen and hydrogen are obtained.

nitrogen from [1]

hydrogen from [1]

(ii) Name the catalyst used in this process.

..... [1]

(iii) What is the most important use of ammonia?

..... [1]

(b) The following graph shows how the percentage of ammonia in the equilibrium mixture changes with temperature.

(i) Explain the term *equilibrium*.

.....
.....
.....
..... [2]

(ii) How does the percentage of ammonia vary with temperature?

..... [1]

(c) (i) Sketch a graph which shows how the percentage of ammonia in the equilibrium mixture varies with pressure.

For
Examiner's
Use

[1]

(ii) Explain why the graph has the shape shown.

.....

.....

..... [2]

[Total: 10]

7 Hydrogen reacts with the halogens to form hydrogen halides.

(a) Bond energy is the amount of energy, in kJ, that must be supplied (endothermic) to break one mole of a bond.

For
Examiner's
Use

bond	bond energy in kJ/mol
H—H	+436
Cl—Cl	+242
H—Cl	+431

Use the above data to show that the following reaction is exothermic.

.....
.....
.....
.....
..... [3]

(b) They react with water to form acidic solutions.

For
Examiner's
Use

(i) Explain why water behaves as a base in both of these reactions.

.....
..... [2]

(ii) At equilibrium, only 1% of the hydrogen chloride exists as molecules, the rest has formed ions. In the other equilibrium, 97% of the hydrogen fluoride exists as molecules, only 3% has formed ions.

What does this tell you about the strength of each acid?

.....
..... [2]

(iii) How would the pH of these two solutions differ?

..... [1]

[Total: 8]

(c) When lactic acid is heated, acrylic acid is formed.

lactic acid

acrylic acid

For
Examiner's
Use

(i) Complete the word equation for the action of heat on lactic acid.

lactic acid → + [1]

(ii) Describe a test that would distinguish between lactic acid and acrylic acid.

test

result for lactic acid

result for acrylic acid [3]

(iii) Describe a test, other than using an indicator, which would show that both chemicals contain an acid group.

test

result

..... [2]

[Total: 13]

9 Quantities of chemicals, expressed in moles, can be used to find the formula of a compound, to establish an equation and to determine reacting masses.

(a) A compound contains 72% magnesium and 28% nitrogen. What is its empirical formula?

.....

 [2]

(b) A compound contains only aluminium and carbon. 0.03 moles of this compound reacted with excess water to form 0.12 moles of $Al(OH)_3$ and 0.09 moles of CH_4 .

Write a balanced equation for this reaction.

.....

 [2]

(c) 0.07 moles of silicon reacts with 25g of bromine.

(i) Which one is the limiting reagent? Explain your choice.

.....

 [3]

(ii) How many moles of $SiBr_4$ are formed?

..... [1]

[Total: 8]

3 The following is a list of the electron distributions of atoms of unknown elements.

For
Examiner's
Use

element	electron distribution
A	2,6
B	2,8,4
C	2,8,8,2
D	2,8,18,8
E	2,8,18,8,1
F	2,8,18,18,7

(a) Choose an element from the list for each of the following descriptions.

(i) It is a noble gas.

(ii) It is a soft metal with a low density.

(iii) It can form a covalent compound with element **A**.

(iv) It has a giant covalent structure similar to diamond.

(v) It is a diatomic gas with molecules of the type X_2 [5]

(b) Elements **C** and **A** can form an ionic compound.

(i) Draw a diagram that shows the formula of this compound, the charges on the ions and the arrangement of the valency electrons around the negative ion.

Use **o** to represent an electron from an atom of **C**.

Use **x** to represent an electron from an atom of **A**.

5 Insoluble salts are made by precipitation.

For
Examiner's
Use

(a) A preparation of the insoluble salt iron fluoride is described below.

To 15 cm³ of aqueous iron(III) chloride, 45 cm³ of aqueous sodium fluoride is added. The concentration of both solutions is 1.00 mol / dm³. The mixture is filtered and the precipitate washed with distilled water. Finally, the precipitate is heated in an oven.

(i) Complete the equation.

(ii) Why is the volume of sodium fluoride solution three times that of the iron(III) chloride solution?

.....
..... [1]

(iii) Why is the mixture washed with distilled water?

.....
..... [1]

(iv) Why is the solid heated?

.....
..... [1]

(b) The formulae of insoluble compounds can be found by precipitation reactions.

To 18.0 cm³ of an aqueous solution of the nitrate of metal T was added 2.0 cm³ of aqueous sodium phosphate, Na₃PO₄. The concentration of both solutions was 1.00 mol/dm³. When the precipitate had settled, its height was measured.

For
Examiner's
Use
