International General Certificate of Secondary Education

MARK SCHEME for the May/June 2010 question paper
for the guidance of teachers

**0417 INFORMATION AND COMMUNICATION
TECHNOLOGY**

0417/02

Paper 2 (Practical Test A), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

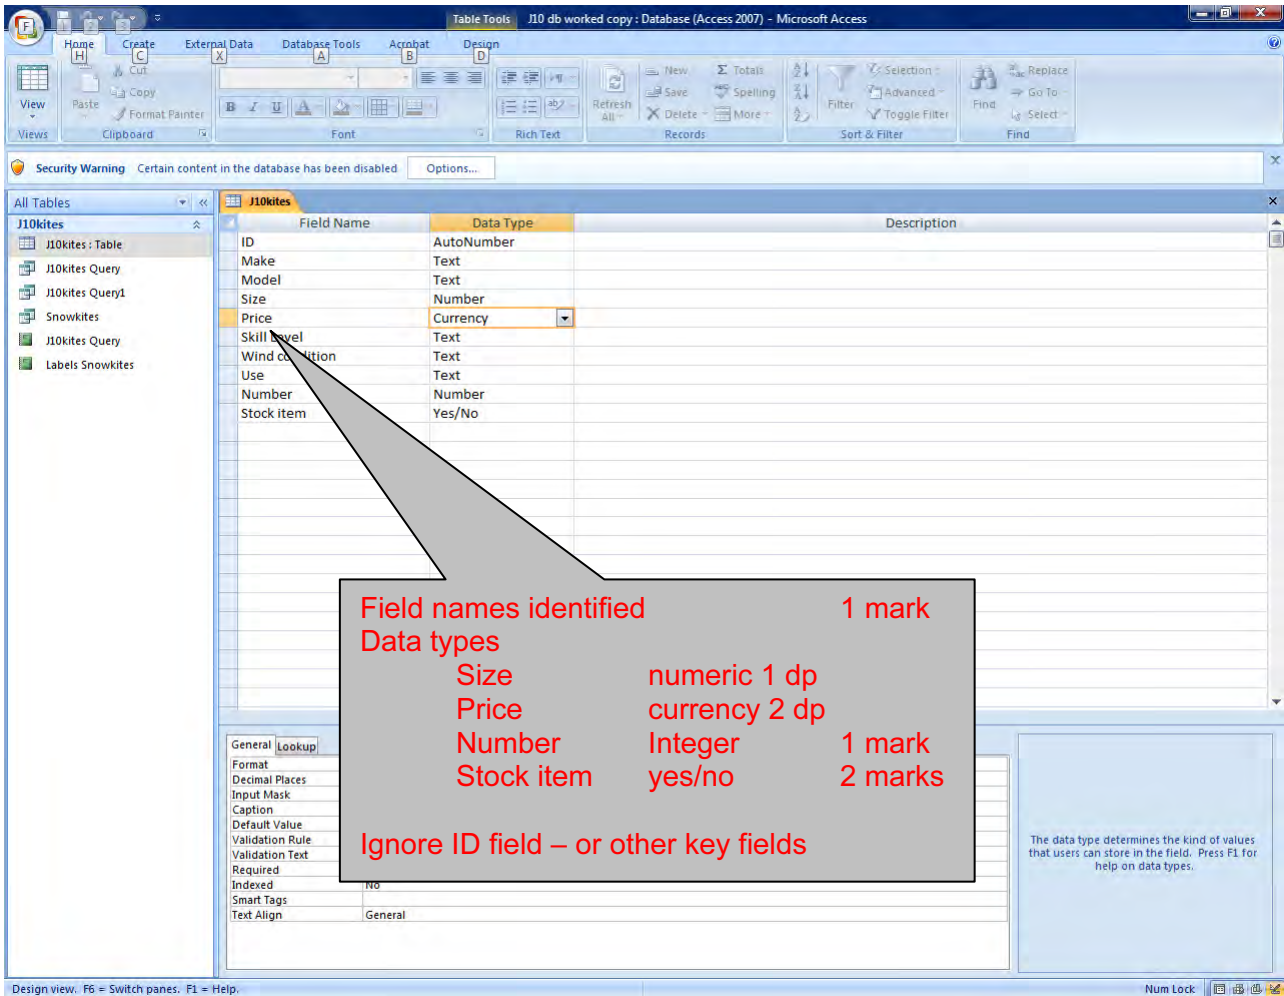

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2010 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Power Kite Sports

Draft Report by: name

You may have tired of spending your holiday lying by the pool and have seen huge kites drifting over the beach and decide you would like the chance to try a new sport. You remember the little kites you used to fly on the beach when you were a child but thought it would be a sport in a new way. These kites are flown over the sea and allow you to make them fly to the air. You decide to have

A four line kite is needed for beach boarding, and has two lines which provide a wide area. The kite is connected to a handle or bar, and, by pulling on the power lines, the kite will take off and rise. Pulling the brake lines causes the kite to land.

Over the last centuries kites held a fascination for scientists and were used for a means of transport

Paragraph **Deleted here** **1 mark**

thought impossible, which seems strange now in our age of jet transport, but the development of the aerofoil shape of the kite wing led directly to an understanding of powered flight. Kites were used for scientific experiments, for rescue and had a role in war.

of an kite fly you of the Here always follow:

- Do not attempt to learn power kiting without training
- Insure yourself with third party insurance
- Always wear safety protection (helmet and pads)
- Never fly near power lines, roads, airports, or trees
- Never fly in stormy weather
- Never touch the lines of a kite when under tension
- Never fly upwind of a group of people
- Never over estimate your own ability
- Use kite killers
- Never fly attached to a fixed point!

Traction growing kiting a snow k sports power the vehicle.

If you follow all these rules, you will also maximise your chance to have a great time flying your kites!

Bullets applied to correct text **1 mark**

Before you use a kite to ride, you need to learn to fly it. A two line kite is easy to learn to fly. One line is attached to each wrist and you pull the left one to make the kite go left. Pull the right strap and the kite goes to the right. Landing these types of kites requires sending the kite to the edge of the window, making sure it is low in the window, and letting it land on the ground. The "window" is the cone shaped area down wind in front of you. At the top of the window the kite flies high and to the sides it will fly lower.

Candidate no. and Centre no. left 1 mark
Automatic file name right 1 mark

here are These

include land boarding, snow kiting, buggy racing and paragliding. These sports generally match a similar sport so that a land board is similar to a skate board and for snow kiting you use a board similar to a snow board.

J10kites Query1		
Model	Size	Use
Rage	1.8	Buggy / Land Board
Cult	2.0	Buggy / Land Board
Hornet	2.0	Buggy / Land Board
Reactor	2.2	Buggy
Blurr	2.5	Buggy
Cult	2.5	Buggy / Land Board
Rage	2.5	Buggy / Land Board
Reactor	2.9	Buggy
Hornet	3.0	Buggy / Land Board

A kite buggy is a light, purpose-built vehicle powered by a traction kite (power kite). It is similar to a land yacht, but the driver steers the single front wheel with his feet, while he controls the kite, usually attached on a harness, with his arms. The speed achieved in kite buggies by skilled drivers can range up to around 110 km/h (70 mph), hence protective clothing, including a safety helmet, is commonly worn. The kite buggy was probably invented in China around the 13th century. It was introduced by George Pocock in the UK in 1827 and then available commercially in the USA and UK since the late 1970s.

This is 1 line

For kite surfing you need a special surf board as well as a suitable kite. These are generally in an area, and need to be inflated in shallow water. You will probably need a specific type of kite. Once you can reach exhilarating speeds over the water, you can jump and perform aerial stunts.

Talk to any kite surfer and find out that you get professional lessons to the seas. Not only will they show you and that of others too, but it will give you the chance to try kite surfing without spending lots of money on kit you may not use. We help you to organise your holiday and suitable courses.

Worm air thermal currents are used to paraglide. Atmospheric conditions can be used to lift you in the air. Birds of prey can be trained to fly with their lead. Paragliding is a sport that is popular in many villages and towns. It is not just for fun, or you may take part in competitions if you become serious. You might take up kite surfing at resorts in Egypt, or book a snow kiting holiday to Norway. You might kite with your buggy in the sand dunes of Dubai, or paraglide from the mountains in the USA.

Here are some courses you might want to take:

Learn to use your kite safely		
Course	Level	Duration
Fly your first kite	Beginner	1 hour
Basic kite flying skills	Beginner	3 hours
Basic kite surfing techniques	Beginner	3 half days
Further kite surfing skills	Intermediate to Advanced	3 days
