COMPUTER SCIENCE

Paper 2 Algorithms, Programming and Logic

MARK SCHEME

Maximum Mark: 50

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond
 the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

© UCLES 2023 Page 2 of 16

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Please note the following further points:

The words in **bold** in the mark scheme are important text that needs to be present, or some notion of it needs to be present. It does not have to be the exact word, but something close to the meaning.

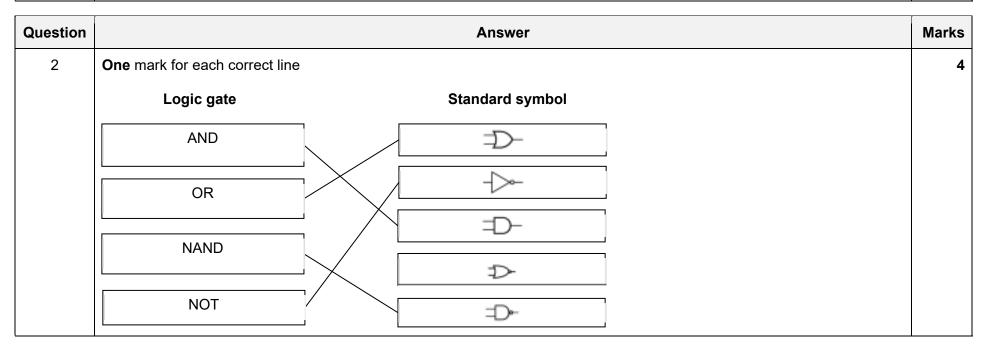

If a word is underlined, this **exact** word must be present.

A single forward slash means this is an alternative word. A double forward slash means that this is an alternative mark point.

Ellipsis (...) on the end of one-mark point and the start of the next means that the candidate **cannot** get the second mark point without being awarded the first one. If a mark point has an ellipsis at the beginning, but there is no ellipsis on the mark point before it, then this is just a follow-on sentence and **can** be awarded **without** the previous mark point.

Question	Answer	Marks
1	A	1

Question	Answer	Marks
3	One mark for each correct answer structure diagram / chart flowchart pseudocode	3

© UCLES 2023 Page 4 of 16

Question	Answer	Marks
4(a)	 One mark for each point (max three). range check with acceptable values is (greater than) zero and less than 1000 presence check to ensure the program will not continue until a value has been entered type/character check to ensure that a number is entered length check to ensure there are no more than 3 digits entered 	3
4(b)(i)	To verify the data / for verification / as a verification check // to make sure that no changes are made to the data on entry	1
4(b)(ii)	One mark for each point (max three). use of iteration use of two inputs to check that the two inputs are the same / different use of the given variable Measurement	3
	For example REPEAT OUTPUT "Please enter measurement " INPUT Measurement OUTPUT "Please re-enter measurement " INPUT MeasurementCheck UNTIL Measurement = MeasurementCheck	

Question	Answer	Marks
5	Due to an issue with Question 5, the question has been removed from the question paper.	

© UCLES 2023 Page 5 of 16

Question	Answer	Marks
6	 One mark for each feature and one mark for corresponding example (max six) ensuring that all identifiers have meaningful names example using Total to store a running total using comments to explain how the program works example // all values are zeroed before the next calculation using procedures and functions for the tasks within a program example CalculateInterest (Deposit, Rate) 	6

Question	Answer	Marks
7(a)	 07 04/12 or 16/18 02/20 	3
7(b)	<pre>One mark for each error identified and correction • Line 07 Total ← Total + Number * Counter should be Total ← Total + Number[Counter] * Counter • Line 08 IF Number[Counter] = 0 should be IF Number[Counter] = -1 // should be IF Number[Counter] < 0 • Line 16 FOR Counter ← 0 TO 5 should be FOR Counter ← 1 TO 5</pre>	3

© UCLES 2023 Page 6 of 16

Question	Answer	Marks
7(c)	One mark for place in algorithm (max one) around lines 05 and 06 line 07 (immediately) after the input of the number	4
	Three marks pseudocode One mark for each point (max three) Use of REPEAT UNTIL // any working loop structure check for >0 // >=0 check for <10 // >9 check for whole number check for -1 check for length of digit <> 1	
	<pre>Example REPEAT OUTPUT "Enter a digit " INPUT Number[Counter] UNTIL Number[Counter] = Round(Number[Counter],0) AND ((Number[Counter] = -1) OR (Number[Counter] > 0 AND Number[Counter] < 10))</pre>

Question		Answer		Marks			
10(a)	SongNumber	SongNumber					
10(b)	One mark for ev	One mark for every two correct data types					
	Field	Data Type					
	SongNumber	Text/Alphanumeric					
	Title	Text/Alphanumeric					
	Recorded	Date/time					
	Minutes	Real					
10(c)	• to find the t	ach point otal number of minutes of music otal number of songs or the genre rock		3			

Question	Answer	Marks
11(a)	One mark for any two correct lines	2
	DECLARE P : STRING P ← "The world" DECLARE Q : CHAR Q ← 'W'	

© UCLES 2023 Page 10 of 16

Question	Answer	Marks				
11(b)	One mark for each point (max four) converting P to upper case finding the length of P using a loop to check for position of Q using the string operation substring storing the loop counter in Position if the value is found					
	For example: P					
	THEN Position ← Counter ENDIF Counter ← Counter + 1 UNTIL Position <> 0 OR Counter = LENGTH(P)					
11(c)	5	1

Question	Answer	Marks	
12	Read the whole answer: Check if each requirement listed below has been met. Requirements may be met using a suitable built-in function from the programming language used (Python, VB.NET or Java) Mark SEEN on script if requirement met, cross if no attempt seen, NE if partially met (see marked scripts). Use the tables for A02 and A03 below to award a mark in a suitable band using a best fit approach Then add up the total. Marks are available for: A02 (maximum 9 marks) A03 (maximum 6 marks) Data Structures required names shown underlined must be used as given in the scenario Arrays or lists Account, AccDetails Variable Size, AccountNumber Requirements (techniques) R1 Check account number and password (iteration and validation, selection, input, output) R2 Display menu and make a selection (output, input and selection)		
	<pre>R3 Perform actions selected (use of arrays and procedures with parameters) Example 15 mark answer in pseudocode // Procedures to be called PROCEDURE CheckDetails (AccID : INTEGER)</pre>
