Cambridge	Cambridge International Exami Cambridge International General	inations Certificate of Secondary Education
CANDIDATE NAME		
CENTRE NUMBER		CANDIDATE NUMBER
CHEMISTRY		0620/62
Paper 6 Alterna	tive to Practical	October/November 2015
		1 hour
Candidates ans	swer on the Question Paper.	
No Additional M	laterials are required.	

# **READ THESE INSTRUCTIONS FIRST**

2 6

Write your Centre number, candidate number and name on all the work you hand in.Write in dark blue or black pen.You may use an HB pencil for any diagrams or graphs.Do not use staples, paper clips, glue or correction fluid.DO **NOT** WRITE IN ANY BARCODES.

Answer **all** questions. Electronic calculators may be used. You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of **12** printed pages.

**1** The volume of hydrochloric acid that reacts with 25.0 cm<sup>3</sup> of aqueous sodium hydroxide can be found using the apparatus below.

(a) Complete the boxes to identify the pieces of apparatus labelled.

(b) Name a suitable indicator that could be used.

[1]	[1]
-----	-----

© UCLES 2015

(c) A student did the experiment four times and the volume of hydrochloric acid added each time was measured.

Use the burette diagrams in the table to record the volumes of hydrochloric acid added.

experiment	burette diagram	volume of acid added/cm <sup>3</sup>
1	16 17 18	
2	16 17 18	
3	16 17 18	
4	16 17 18	

[2]

(d) (i) What type of chemical reaction occurs when hydrochloric acid reacts with sodium hydroxide?

## (ii) How did the student know when all of the sodium hydroxide had reacted?

......[1]

© UCLES 2015

(e) (i)	Which <b>one</b> of the results is anomalous?		
	[1]		
(ii)	Suggest what may have caused this result to be anomalous.		
	[1]		
(iii)	Use the other results to calculate the average amount of hydrochloric acid that reacted with the sodium hydroxide solution.		
	[2]		
(f) Which of the solutions was more concentrated? Explain your answer.			
	[Total: 13]		

© UCLES 2015

- \_solvent front R Ρ baseline Q (a) Name this method of separation. ......[1] (b) What could have been used to apply the mixture onto the paper? ......[1] (c) Suggest a possible solvent that could be used for this separation. ......[1] (d) Suggest why compound **Q** remained on the baseline. .....[1]
- A mixture of three compounds, P, Q and R, was separated using a piece of paper. 2

(e)  $R_{\rm f}$  values are used to identify compounds.

Use the diagram to work out the  $R_{f}$  value of compound **R**.

**3** A teacher demonstrated the rate of reaction of dilute nitric acid with powdered calcium carbonate at different temperatures.

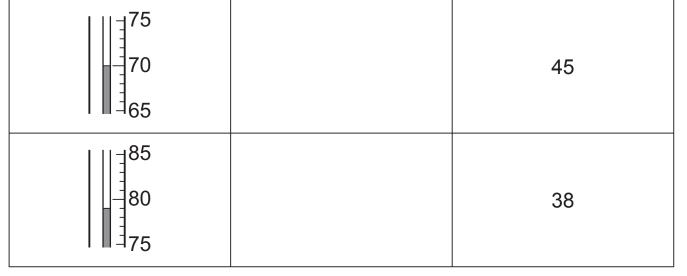

50 cm<sup>3</sup> of dilute nitric acid was heated to a known temperature and placed on a balance.

Excess powdered calcium carbonate was added to the nitric acid and the mass of the beaker and contents recorded. The time taken for the mass to decrease by 1 g was measured. The experiment was repeated at different temperatures.

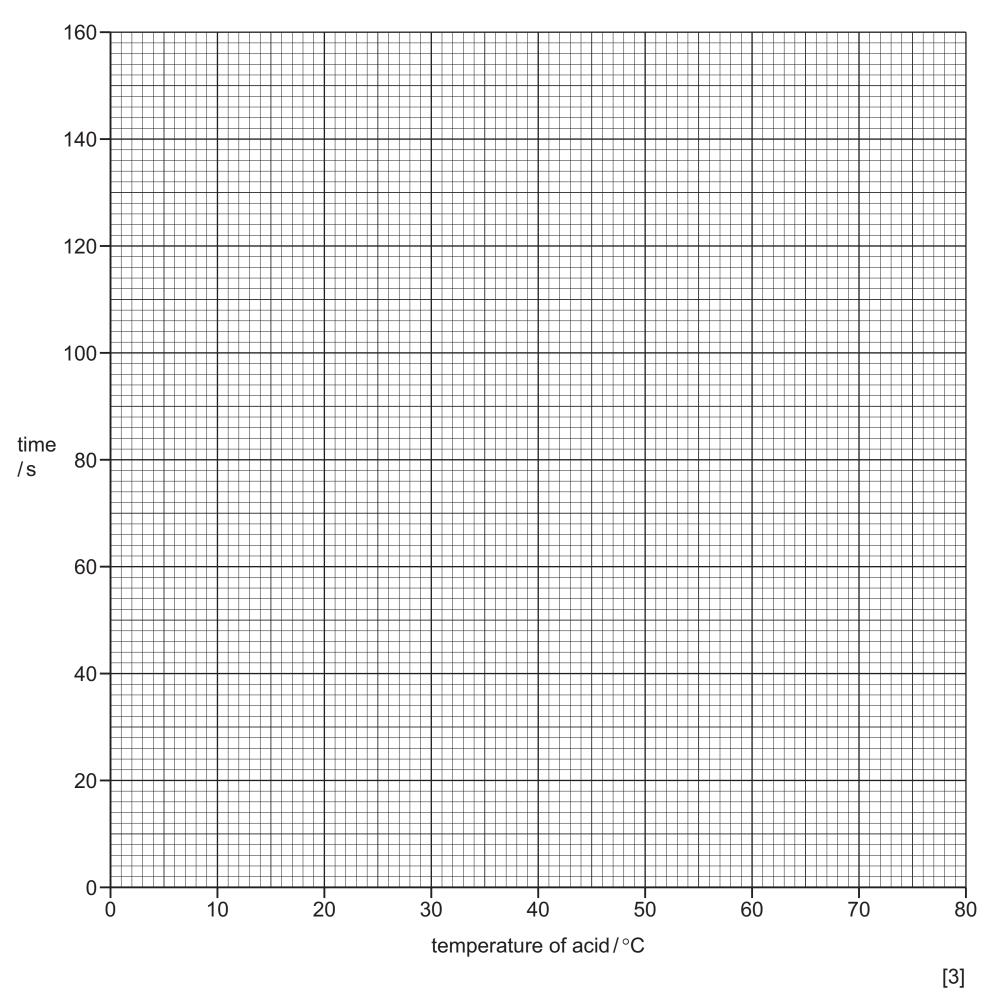

(a) Using the thermometer diagrams, record the temperatures in the table.

thermometer diagram	temperature of nitric acid/°C	time for mass to decrease by 1 g in seconds
30 25 20		139
		102
45 40		99
		60

7

(b) Plot the results on the grid and draw a smooth line graph.

(c) Which point is inaccurate? Explain why you chose this point.

.....

......[2]

(d) Use your graph to find out the time of reaction at a temperature of 30 °C. Show clearly on the grid how you obtained your answer.

.....[3]

(e)	(i)	How does the rate of this reaction vary with the change in temperature?		
		[1	]	
	(ii)	Explain why.		
			•	
			•	
		[2	]	
(f)	(i)	What would be the effect of repeating the experiments using lumps of calcium carbonate instead of powdered calcium carbonate? Explain your answer.	è	
		[2		
	(ii)	Sketch on the grid the curve you would expect. [1	]	
(g)	(g) Explain why cotton wool was used in the neck of the conical flask.			
			•	
		[2	]	
		[Total: 19	]

- 4 Three jars of gas have lost their labels. The gases are known to be
  - ethene,
  - ammonia,
  - oxygen.

Complete the table to show the chemical tests that could be used to identify each of these gases.

gas	chemical test	result of test
ethene		[2]
ammonia		[2]
oxygen		[2]

[Total: 6]

Two aqueous solutions, K and L, were analysed. Solution L was aqueous calcium iodide.
Tests on the solutions and some of the observations are in the following tables.
Complete the observations in the second table.

		tests	observations
tests on solution K		solution K	
(a)	Col	our of solution <b>K</b> .	green/blue
(b) The solution was divided into four equal portions.			
	(i)	Aqueous sodium hydroxide was added to the first portion drop by drop and shaken.	pale blue precipitate
		An excess of aqueous sodium hydroxide was then added to the mixture.	the precipitate was insoluble
	(ii)	Aqueous ammonia was added to the second portion drop by drop and shaken.	blue precipitate
		An excess of aqueous ammonia was then added to the mixture.	the precipitate dissolved to form a deep blue solution
(	(iii)	Dilute nitric acid and barium nitrate solution were added to the third portion.	no visible change
(	(iv)	Dilute nitric acid and silver nitrate solution were added to the fourth portion.	white precipitate formed

(c) Identify solution **K**.

**6** You are provided with samples of three metals, tin, zinc and silver.

Plan an investigation to show the order of reactivity of these three metals. You are provided with common laboratory apparatus and dilute acids.
