Paper 3 Pure Mathematics 3 (P3)

**October/November 2019**

**1 hour 45 minutes**

Candidates answer on the Question Paper.

Additional Materials: List of Formulae (MF9)

**READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

**DO NOT WRITE IN ANY BARCODES.**

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

The total number of marks for this paper is 75.

This document consists of **19** printed pages and **1** blank page.

**BLANK PAGE**

- 4 (i) By first expanding  $\tan(2x + x)$ , show that the equation  $\tan 3x = 3 \cot x$  can be written in the form  $\tan^4 x - 12 \tan^2 x + 3 = 0$ . [4]

- 5 (i) By sketching a suitable pair of graphs, show that the equation  $\ln(x + 2) = 4e^{-x}$  has exactly one real root. [2]

- (ii) Show by calculation that this root lies between  $x = 1$  and  $x = 1.5$ . [2]

**6 Throughout this question the use of a calculator is not permitted.**

The complex number with modulus 1 and argument  $\frac{1}{3}\pi$  is denoted by  $w$ .

- (i) Express  $w$  in the form  $x + iy$ , where  $x$  and  $y$  are real and exact. [1]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

The complex number  $1 + 2i$  is denoted by  $u$ . The complex number  $v$  is such that  $|v| = 2|u|$  and  $\arg v = \arg u + \frac{1}{3}\pi$ .

- (ii) Sketch an Argand diagram showing the points representing  $u$  and  $v$ . [2]

7 The plane  $m$  has equation  $x + 4y - 8z = 2$ . The plane  $n$  is parallel to  $m$  and passes through the point  $P$  with coordinates  $(5, 2, -2)$ .

(i) Find the equation of  $n$ , giving your answer in the form  $ax + by + cz = d$ . [2]

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

(ii) Calculate the perpendicular distance between  $m$  and  $n$ . [3]

8

The diagram shows the graph of  $y = \sec x$  for  $0 \leq x < \frac{1}{2}\pi$ .

- (i) Use the trapezium rule with 2 intervals to estimate the value of  $\int_0^{1.2} \sec x \, dx$ , giving your answer correct to 2 decimal places. [3]

.....

.....

.....

.....

.....

.....

.....

.....

- (ii) Explain, with reference to the diagram, whether the trapezium rule gives an overestimate or an underestimate of the true value of the integral in part (i). [1]
