

GCE Examinations
Advanced Subsidiary

Core Mathematics C4

Paper F

Time: 1 hour 30 minutes

Instructions and Information

Candidates may use any calculator EXCEPT those with the facility for symbolic algebra, differentiation and/or integration.

Full marks may be obtained for answers to ALL questions.

Mathematical formulae and statistical tables are available.

This paper has seven questions.

Advice to Candidates

You must show sufficient working to make your methods clear to an examiner.
Answers without working may gain no credit.

Leave
blank

3. continued

Lined writing area for the continuation of question 3.

Leave
blank

4. Relative to a fixed origin, two lines have the equations

$$\mathbf{r} = (7\mathbf{j} - 4\mathbf{k}) + s(4\mathbf{i} - 3\mathbf{j} + \mathbf{k}),$$

and
$$\mathbf{r} = (-7\mathbf{i} + \mathbf{j} + 8\mathbf{k}) + t(-3\mathbf{i} + 2\mathbf{k}),$$

where s and t are scalar parameters.

(a) Show that the two lines intersect and find the position vector of the point where they meet. (5)

(b) Find, in degrees to 1 decimal place, the acute angle between the lines. (4)

6. (a) Find $\int \tan^2 x \, dx$. (3)

(b) Show that

$$\int \tan x \, dx = \ln |\sec x| + c,$$

where c is an arbitrary constant. (4)

Figure 1

Figure 1 shows part of the curve with equation $y = x^{\frac{1}{2}} \tan x$.

The shaded region bounded by the curve, the x -axis and the line $x = \frac{\pi}{3}$ is rotated through 2π radians about the x -axis.

(c) Show that the volume of the solid formed is $\frac{1}{18} \pi^2 (6\sqrt{3} - \pi) - \pi \ln 2$. (6)

6. continued

Lined writing area for question 6.

7.

Figure 2

Figure 2 shows a hemispherical bowl of radius 5 cm.

The bowl is filled with water but the water leaks from a hole at the base of the bowl. At time t minutes, the depth of water is h cm and the volume of water in the bowl is V cm³, where

$$V = \frac{1}{3}\pi h^2(15 - h).$$

In a model it is assumed that the rate at which the volume of water in the bowl decreases is proportional to V .

(a) Show that

$$\frac{dh}{dt} = -\frac{kh(15-h)}{3(10-h)},$$

where k is a positive constant. (5)

(b) Express $\frac{3(10-h)}{h(15-h)}$ in partial fractions. (3)

Given that when $t = 0$, $h = 5$,

(c) show that

$$h^2(15-h) = 250e^{-kt}. \quad (6)$$

Given also that when $t = 2$, $h = 4$,

(d) find the value of k to 3 significant figures. (3)
