UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the October/November 2011 question paper for the guidance of teachers

0460 GEOGRAPHY

0460/41

Paper 4 (Alternative to Coursework), maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the October / November 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

| \ A /\ A /\ A / | .dynan | α | noro | 222 |
|-----------------|---------|----------|--------|--------|

| Page 2 | Mark Scheme: Teachers' version | Syllabus | Paper |
|--------|--------------------------------|----------|-------|
| | IGCSE – October/November 2011 | 0460 | 41 |

| (a) (i) | Area served by a settlement or service | | [1] |
|---------|--|-----------|-------------|
| (ii) | High / low order of services provided Number / variety of services provided / more services Specialised services available Specific functions of different settlements Ease of access to settlements / transport links Smaller centres means more competition | | ro1 |
| | Comparative examples of services with different sphere of influence | | [3] |
| (b) (i) | Q1: Should only be asking students at school so superfluous question / obvious waste of time Q2: Too vague to get specific and consistent answers / too personal / statement of the second seco | | |
| | options Q3: Closed question, very specific answer / give options of methods of travel how travel to school / sometimes | / ask at | oout [3] |
| (ii) | Credit explanation. No mark for 'Yes' Enough responses to be able to test the hypotheses / to compare / reliable 10% of population is a representative sample Waste of time / no time to do more | | [2] |
| (iii) | Use registers / school data base to sample every tenth students Select students from different class / year group / ages Select equal numbers of male / female students 1 mark for naming sampling method – random, systematic, stratified – r description | nust linl | k to [2] |
| (c) (i) | Insert data (7) for Feng Tai into table – both tally and total for mark | | [1] |
| (ii) | Insert seven symbols into Tong Zhou | | [1] |
| (iii) | Shade Xi Cheng (15 – 19 category) | | [1] |
| (iv) | Pictogram: Shows individual detail of numbers / exact number Easy to read off individual numbers / easy to count / identify exact number Can see overall pattern of distribution Easy to compare numbers Easy to understand / clear / simple / detailed / visual | | |
| | Choropleth map: Shows overall pattern of distribution / compare areas Links similar areas within a category / groups Can be used to compare large numbers Clear visual impact / shading categories in key | 4 @ 1 | [4] |

(v) No / disagree / no clear pattern / true to some extent that numbers decrease with distance – reserve

Some areas away from school are in high category

Some areas near to school are in low categories

General pattern is more students come from north & east, and less come from south & west, rather than distance away from school

e.g. Ping Gu (district 12) has 15 students / e.g. Chao Yang (district 7) has 8 students

Data to 1 mark max – reserve [4]

(d) (i) Completion of table – 30%

[1]

(ii) Pie graph completion – bus and car

1 mark for dividing line

1 mark for shading

[2]

(iii) Larger percentage / most students travel to school by bus / 5% more travel by bus Only 31% travel by car / 39 out of 125 travel by car / 69% don't travel by car / more travel by other methods than car

Almost as many (30%) travel by train

First part of hypothesis is correct – there are 5 ways that students travel to school

No credit just for percentage or figures without interpretation

[3]

(iv) Additional questions in questionnaire such as:

How far is your home from school? / how far do you travel to school?

How long does it usually take you to travel to school? / average time to travel to school Why do you use your named method of travel?

Do you always use the same method of travel? / more than one method of travel Which route do you take to school?

Do students travel alone or with others

Could investigate if there is any relationship between where students live and their method of travel

Possibly linked to bus / train services

Could investigate links between gender / age & methods of travel

[2]

[Total: 30]

2

| | | ermometer / maximum-minimum thermometer et and dry (bulb) thermometer / hygrometer | | |
|-----|------|--|----------|-----|
| ` . | То | To test the measuring equipment To record weather conditions before & after investigation / control reading To show the changes in weather conditions / compare results with other days | | |
| (c) | (i) | Diagram = 1 mark Labelling = 1 mark e.g. Funnel placed into jar / open container used to collect water / measurin Explanation = 2 marks Jar stood firmly in ground / open ground / away from trees / fastened to pol Water poured into measuring cylinder Noting / recording water level in measuring cylinder / jar Reading taken every 4 hours period of time / fixed period of time Empty container after use | | [4] |
| (| (ii) | Anemometer: cups / spoons revolve in the wind / spins / turns Connected to meter which counts number of revolutions per minute Shows reading as kms or miles per hour / reading from screen Wind vane: Arrow points the direction the wind (is coming from) | | |
| | | Horse provides large surface area to catch the wind | 2 marks | [4] |
| (i | ii) | Index pointer set to previous / local weather station reading / is point of cor Other pointer moves to show current AP & index pointer shows change | nparison | [2] |
| (i | v) | Oktas / eighths | | [1] |
| (d) | (i) | 1018 | | [1] |
| (| (ii) | Rainfall bar to show 3 mm at 11.00 | | [1] |
| (i | ii) | Completion of line graph to show atmospheric pressure 19.00 = 1012, 20.00 = 1015, 21.00 = 1018 1 mark for plots, 1 mark for joining lines | | [2] |
| (i | v) | Wind direction: S Wind speed: 20 km/hr (10 mm) | 2 @ 1 | [2] |
| (| (v) | Cumulus cloud with correct shape & light or no shading | | [1] |
| (\ | ∕i) | Shade in 7 oktas (any 7 segments) | | [1] |

| Page 5 | Mark Scheme: Teachers' version | Syllabus | Paper |
|--------|--------------------------------|----------|-------|
| | IGCSE – October/November 2011 | 0460 | 41 |

(e) (i) As atmospheric pressure decreases / low, rainfall increases / high, / as atmospheric pressure increases / high, rainfall decreases / low, / negative / inverse relationship e.g. AP at 1012 rainfall is 0/1 mm, AP 1022 rainfall is 0 mm AP at 992 rainfall is 5 mm, 998 rainfall is 3 mm
 Credit up to 2 marks for data (need mm)

(ii) As atmospheric pressure decreases / low, wind speed increases / high, as atmospheric pressure increases / high, wind speeds decrease / low Atmospheric pressure at 1022 wind speed is 5 km/hr, OR Atmospheric pressure at 1018 wind speed is 3 km/hr, OR Atmospheric pressure at 1012 wind speed is 8/20 km/hr,

Atmospheric pressure at 998 wind speed is 26 km/hr, OR Atmospheric pressure at 992 wind speed is 43 km/hr Allow tolerance of 1 on both sets of figures Credit up to 2 marks for data (need km/hour)

As atmospheric pressure falls winds change from SE to S to SW / towards west As atmospheric pressure rises winds change SW to S to SE / towards east
