

Cambridge IGCSE™

COMPUTER SCIENCE		
Paper 1	Octo	ber/November 2021
MARK SCHEME		
Maximum Mark: 75		
		1
	Published	

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit
 is given for valid answers which go beyond the scope of the syllabus and mark scheme,
 referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question		An	swer	Marks
1(a)	One mark for the correct t	ick		1
	File Size	Tick (✓)		
	999 kB			
	1 MB	✓		
	850 000 bytes			
1(b)	One mark for the correct tick			1
	File Size	Tick (√)		
	4000 MB			
	2 GB	✓		
	2 500 000 kB			

Question	8	An	swer	Marks
2(a)	One mark for correct binary	value, on	e mark for leading zeros	2
	00000000 01000111			
2(b)	One mark for leading zeros,	one marl	c for correct binary value	2
	00000001 00000001			
2(c)	- 0516			1
2(d)(i)	Pressure sensorMotion sensor			2
2(d)(ii)	One mark for the correct tick		1	
	Device	Tick (√)		
	input	✓		
	storage			
	output

Question	Ans	wer			Marks
3(a)	One mark per each row			5	
	Statement	ARQ (√)	Check digit (✓)	Checksum (✓)	
	checks for errors on data entry		✓		
	uses a process of acknowledgement and timeout	✓			
	compares two calculated values to see if an error has occurred		✓	✓	
	may resend data until it is confirmed as received	✓			
	checks for errors in data after transmission from a computer to another			✓	
3(b)	Parity check				1

Question	Answer	Marks
4(a)	Any four from: Printer generates interrupt Interrupt is given a priority Interrupt is queued Interrupt stops CPU from processing current task CPU will service interrupt // Interrupt handler services interrupt generating an output message to state there is a paper jam	4
4(b)	Any two from: - A suitable description of any error that might occur - A peripheral is connected/disconnected - A key on a keyboard is pressed - A mouse button click - A phone/video call is received - A buffer requires more data - A printer runs out of paper - A printer runs out of ink - Opening an application - When switching from one application to another NOTE: If two suitable different errors are described, this can be awarded two marks	2

Question	Answer	Marks
4(c)(i)	Four from: - Bits sent one at a time down a single wire - Data sent in both directions but only one direction at a time	4
4(c)(ii)	Any two from: - Simplex only sends data in one direction so, printer may not be able to tell computer an error has occurred, and computer may not be able to send printer the document to be printed NOTE: Award any valid contextual answer for MP2	2

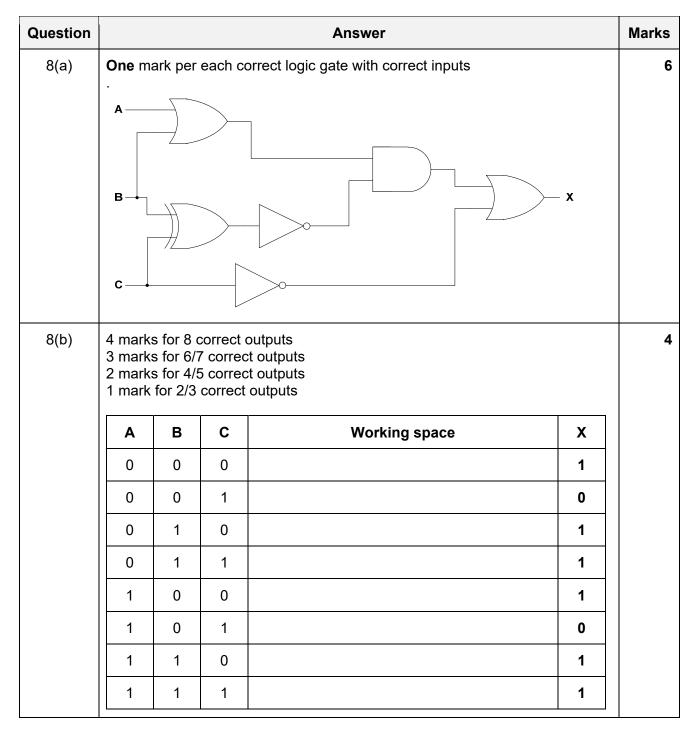

Question	Answer		
5	One mark per correct term	n or description.	6
	Component name	Description	
	Memory Address Register (MAR)	(A register that) holds the address of the data/instruction that needs to be fetched/processed // holds the address of where the data needs to be stored.	
	Program Counter (PC)	(A register that) holds the address of the next / current instruction to be processed.	
	accumulator // ACC	This is a register that is built into the arithmetic logic unit. It temporary holds the result of a calculation.	
	memory data register // MDR	This is a register that holds data or an instruction that has been fetched from memory.	
	Control Unit (CU)	Sends control signals to control the flow of data through the CPU // manages the execution of instructions in the CPU	
	address bus	This carries addresses around the CPU.	

Question	Answer	Marks
6	One mark per correct term in the correct order. - MP4 - MP3 - Microphone - Compressed - MIDI - Notes - Can	7

Question	Answer	Marks
7(a)	Any four from: - Creates an executable file so, would not release source code so, the source code cannot be stolen/edited. so, would not need to be translated every time // so, translator is not required making it machine independent	4
7(b)(i)	Any three from: Compression algorithm used , e.g. RLE Repeating frames/pixels are identified and are collated/indexed No data is permanently removed It just records the changes between frames/pixels	3
7(b)(ii)	Any one from: - Maintains quality // quality better than lossy - Original file is retained // Data is not permanently lost - A significant reduction in file size is not required	1
7(c)(i)	Any four from: (MAX 3 per software licence) Freeware: - User does not have access to the source code - Has copyright - User does not have the right to edit the software - Normally distributed for free // no cost Free software: - User has access to the source code - Still has copyright // Is copyleft - User has the right to edit and share the software - Normally has a fee // cost to buy	4
7(c)(ii)	Distribute as shareware	1
7(d)	Any two from: - URL begins with HTTPS - Padlock symbol is locked	2

Question	Answer	Marks
9	EvenEvenOddEven	4

© UCLES 2021 Page 7 of 8

Question	Answer	Marks
10(a)	To disrupt the operation of a web server/network	1
10(b)	To obtain a user's personal data	1
10(c)	Any three from: - Hacking // Cracking - Virus - Spyware - Malware	3
