Paper 3 Extended

October/November 2012

1 hour 15 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of **19** printed pages and **1** blank page.

Question 1 begins on page 3.

- 1 Cicadas are insects that make a lot of noise.

Fig. 1.1 shows an adult chorus cicada, *Amphipsalta zelandica*, that is only found in New Zealand.

Fig. 1.1

- (a) State three features, **visible in Fig. 1.1**, that show that the chorus cicada is an insect.

1

2

3 [3]

- (b) Insects are classified in the same group as crustaceans, arachnids and myriapods.

Name the group that contains all these animals.

..... [1]

Evolutionary relationships between different species are investigated by examining DNA.

- (c) State precisely where DNA is found in a cell.

.....

..... [2]

For
Examiner's
Use

Small sections of DNA in 14 species of cicada found in Australia, New Caledonia and New Zealand (1 to 14) were examined for similarities and differences.

*For
Examiner's
Use*

The results of the DNA examination of these species were used to make a diagram showing how these cicada species may have evolved. Species that are closely related are grouped together on the right of Fig. 1.2.

The brackets show that the cicada species in New Zealand are in two separate groups.

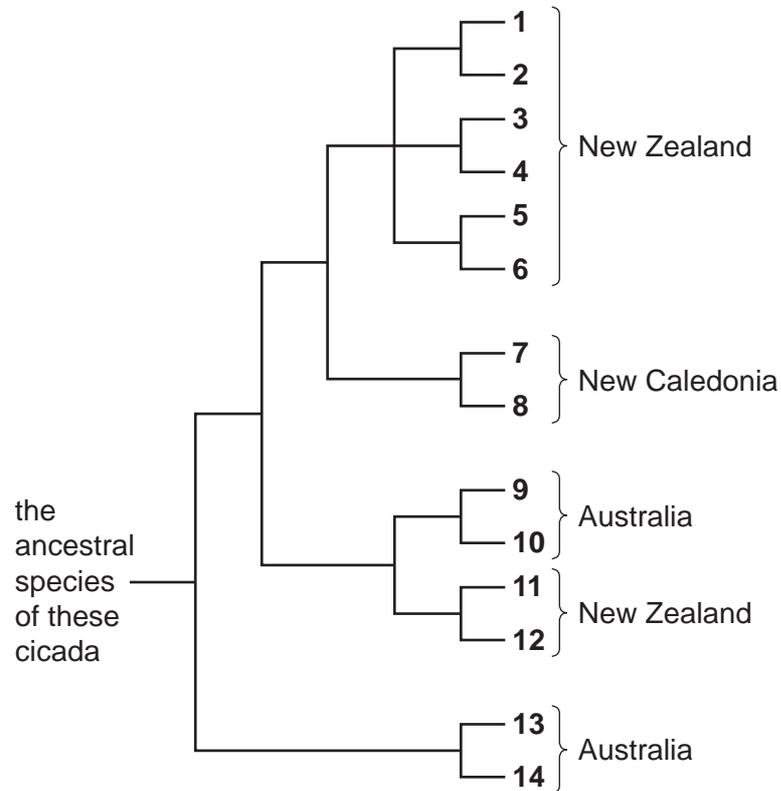

Fig. 1.2

(d) It is suggested that the eight cicada species in New Zealand originated from two migrations, **A** and **B**, from Australia as shown in Fig.1.3.

For
Examiner's
Use

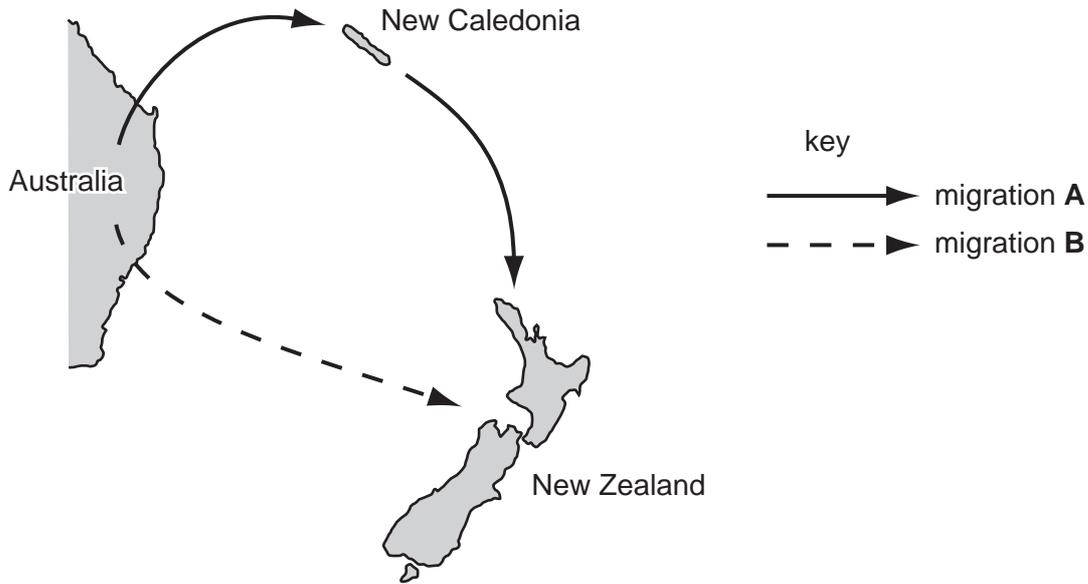

Fig. 1.3

Explain how the results in Fig. 1.2 support the idea that the eight cicada species in New Zealand originated from two migrations of cicadas as shown in Fig. 1.3.

You can use the numbers from Fig. 1.2 in your answer.

.....

.....

.....

.....

.....

.....

.....

.....

[3]

Islands in the Pacific have been colonised by populations of animals that have migrated from Australia, mainland Asia and the Americas. Over many generations these populations have changed. Now they are unable to breed with animals of the original populations in Australia, mainland Asia and the Americas.

*For
Examiner's
Use*

(e) Explain how natural selection has resulted in changes in the populations of animals on islands in the Pacific.

.....

.....

.....

.....

.....

.....

..... [4]

[Total: 13]

Question 2 begins on page 8.

2 (a) Define the term *excretion*.

.....

.....

.....

.....

..... [3]

Fig. 2.1 shows a kidney tubule and the blood vessels associated with it.

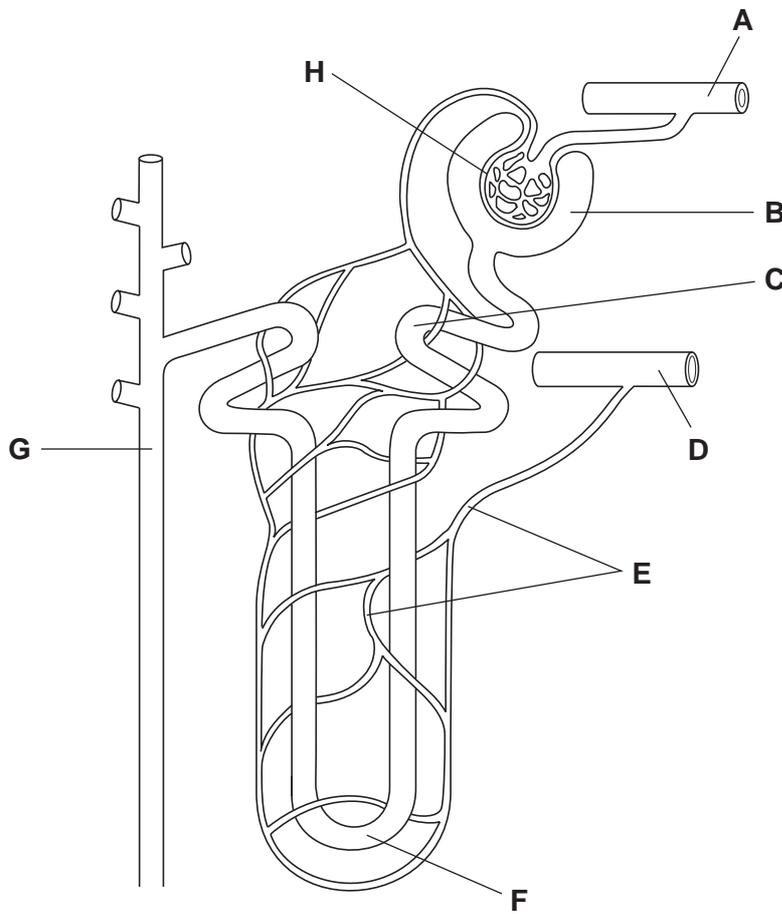

Fig. 2.1

(b) Table 2.1 shows some processes that occur in a kidney.

In Table 2.1, write the **letter** of the part shown in Fig. 2.1 where each process occurs.

You must put **one** letter in each box. You may use the same letter more than once.

Table 2.1

process	letter
filtration of blood	
reabsorption of most of the solutes from the filtrate	
water is absorbed by osmosis to determine the concentration of urine	
unfiltered blood returns to the renal vein	

[4]

(c) Table 2.2 lists the components of blood, filtrate and urine.

Table 2.2

component	blood	filtrate	urine
red blood cells	✓	×	×
white blood cells	✓		
plasma proteins	✓		
glucose	✓		
urea	✓		
salts	✓		
water	✓		

Complete the table by using ticks (✓) and crosses (×) to show whether or not each component is present in filtrate and in urine of a healthy person. The first component has been done for you.

[2]

[Total: 9]

For
Examiner's
Use

3 Mycoprotein is a form of single cell protein. It is produced by growing the fungus, *Fusarium venenatum*, in a fermenter. As the fungus grows in the fermenter it produces large quantities of hyphae which are extracted and processed as shown in Fig. 3.1.

For
Examiner's
Use

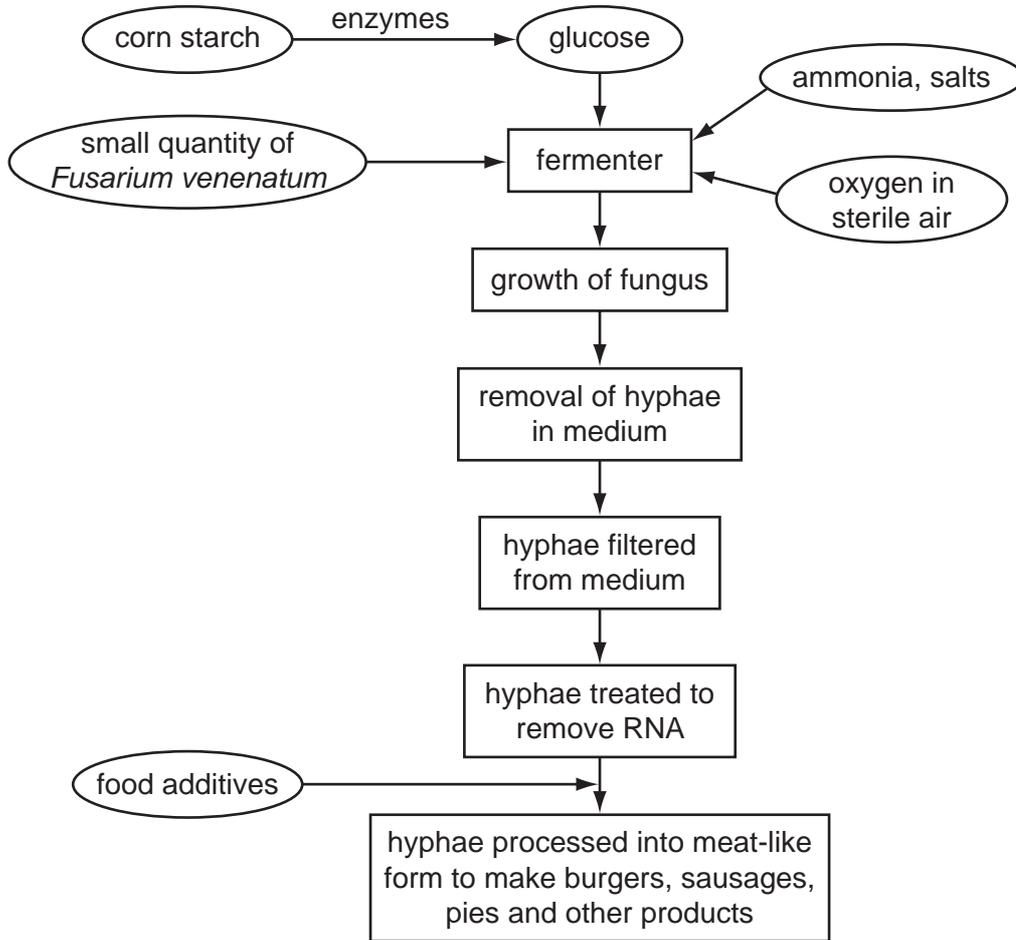

Fig. 3.1

(a) (i) Name an enzyme used to digest the corn starch.

..... [1]

(ii) Explain why it is necessary to digest the corn starch.

.....

 [2]

(b) Explain why sterile conditions are necessary in the fermenter.

.....
.....
.....
..... [2]

In 2008, there were riots in some parts of the world in protest against shortages of staple foods, such as rice.

(c) Explain why it is better ecologically for people to eat foods made from plants rather than from animal products, such as meat.

.....
.....
.....
.....
..... [3]

(d) Describe three possible advantages of using foods prepared from mycoprotein as substitutes for animal products, such as meat.

1
.....
2
.....
3
..... [3]

Exercise that occurs over a longer period of time than weightlifting often involves aerobic respiration as well as anaerobic respiration.

For
Examiner's
Use

Fig. 4.2 shows the oxygen consumed by an athlete during and after a 5000 metre race.

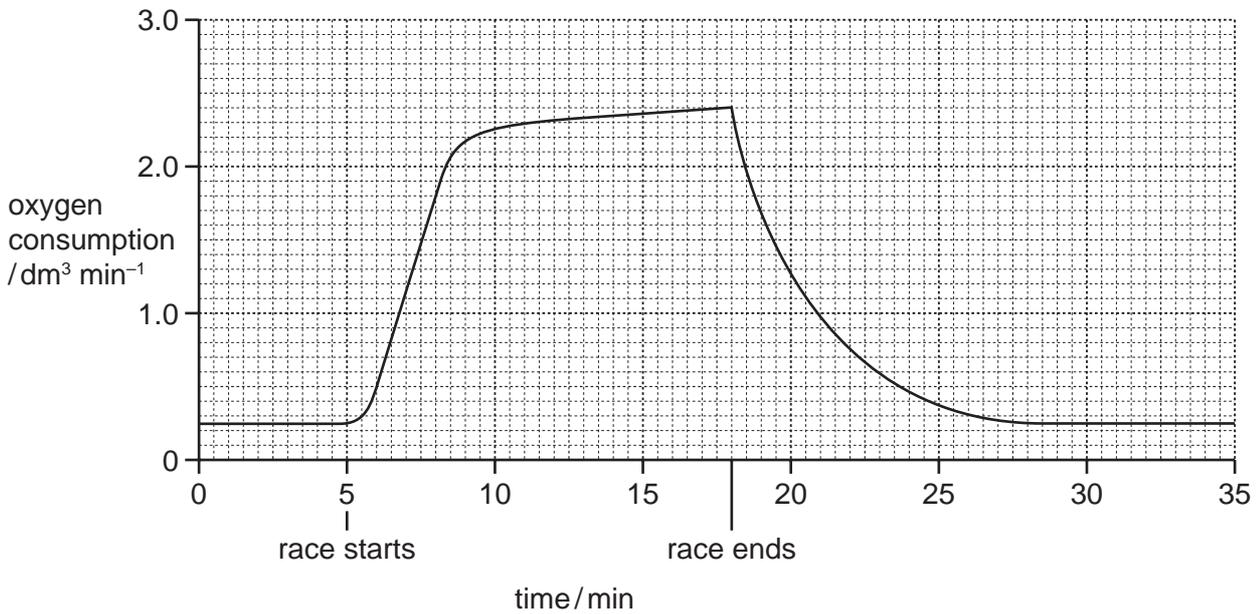

Fig. 4.2

(c) Describe the athlete's oxygen consumption during **and** after the race as shown in Fig. 4.2.

You will gain credit for using the figures in the graph to support your answer.

during

.....

after

.....

[4]

- 5 Fertilisers are used to increase crop yields. Many fertilisers contain compounds of nitrogen and are called 'nitrogen fertilisers'.

For
Examiner's
Use

The development in the early twentieth century of the Haber-Bosch process for converting nitrogen from the air into ammonia made the production of these fertilisers possible.

- (a) Fig. 5.1 shows the global use of nitrogen fertilisers between 1960 and 2003.

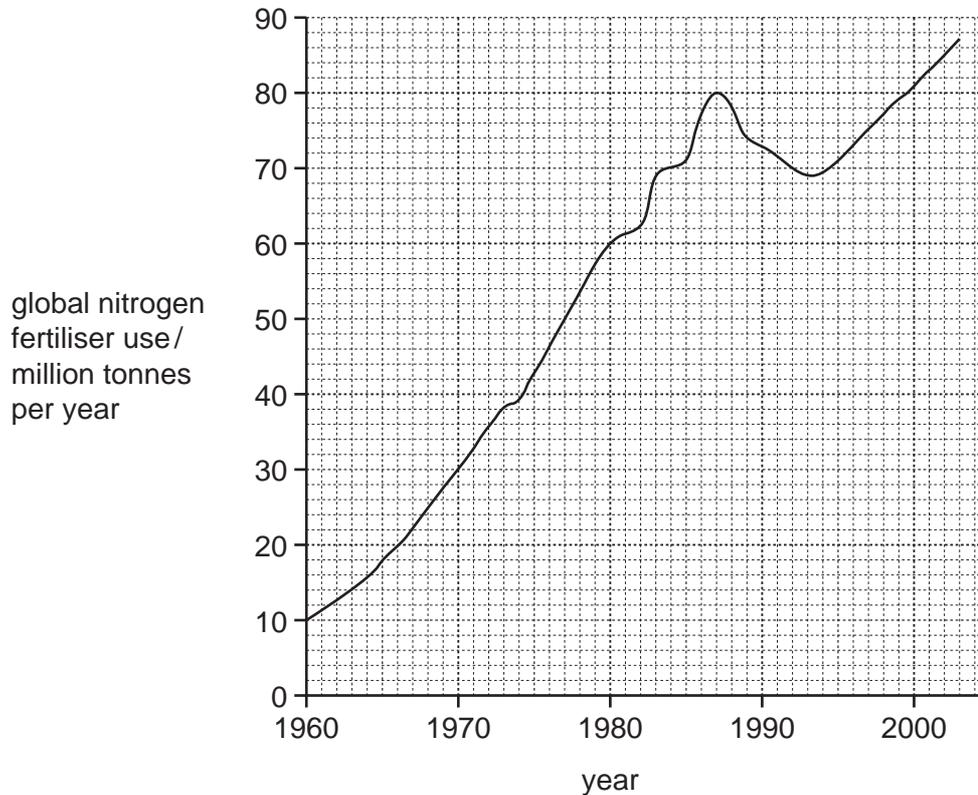

Fig. 5.1

- (i) Calculate the percentage increase in the global use of nitrogen fertilisers between 1970 and 1987. Show your working.

Answer% [2]

(ii) Explain why the use of nitrogen fertilisers has increased.

.....
.....
.....
.....
.....
.....
..... [3]

(b) Some farmers increase the fertility of their soils by adding organic fertilisers, such as manure, and by using legume crops in a crop rotation. Manure contains protein, urea and ammonia in the waste from farm animals.

(i) Explain how nitrogen, in the form of nitrate ions, becomes available in a soil after the addition of manure.

.....
.....
.....
.....
.....
.....
.....
..... [4]

(ii) Explain why legume crops, such as peas, beans, alfalfa and clover are used in crop rotations.

.....
.....
.....
.....
..... [3]

6 Haemoglobin is a protein that is made inside developing red blood cells in the bone marrow.

(a) (i) State the function of haemoglobin.

..... [1]

(ii) Name the small molecules that are combined to make haemoglobin.

..... [1]

(iii) Name the mineral ion provided in the diet that is needed to make haemoglobin.

..... [1]

There are many different varieties of haemoglobin. The gene for haemoglobin exists as two alleles, **Hb^A** and **Hb^S**.

People with the genotype **Hb^SHb^S** have a condition called sickle cell anaemia.

(b) Describe the features of sickle cell anaemia.

.....
.....
.....
.....
.....
.....
..... [3]

(c) The allele for **Hb^S** is rare in many parts of the world, but it is more common in parts of tropical Africa.

Explain why **Hb^S** is more common in parts of tropical Africa.

.....
.....
.....
.....
..... [3]

(d) The parents of people with sickle cell anaemia rarely have this condition.

Explain, using a genetic diagram, how two parents who do not have sickle cell anaemia may have a child with the condition.

.....
.....
.....

parental genotypes ×

gametes +

*genotype of child with
sickle cell anaemia*

[3]

(e) Sickle cell anaemia is an example of variation in humans. There are many causes of variation, including nuclear fall-out.

Suggest how nuclear fall-out could cause variation in humans.

.....
.....
.....
.....
.....
