Paper 6 Alternative to Practical

May/June 2021

1 hour

You must answer on the question paper.

No additional materials are needed.

### INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

### INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [ ].

This document has **12** pages. Any blank pages are indicated.

1 A student determines the density of sand.

Fig. 1.1 shows a beaker with a mark at the 250 cm<sup>3</sup> level.

**Fig. 1.1**

(a) Estimate the volume of water  $V_W$  that the beaker would hold when filled to the top.

$V_W = \dots\dots\dots \text{cm}^3$  [1]

(b) The student uses string and a metre rule to determine the circumference  $c$  of the beaker.

$c = \dots\dots\dots 21.3 \text{cm}$

Explain briefly how to use the string and the metre rule to determine the circumference  $c$  as accurately as possible. You may draw a diagram.

.....

.....

.....

..... [2]

(c) The student measures the height  $h$  of the beaker.

(i) Show clearly on Fig. 1.1, the height  $h$  that he should measure. [1]

His reading is  $h = \dots\dots\dots 9.0 \text{cm}$

(ii) Calculate the external volume  $V_B$  of the beaker using the equation

$$V_B = \frac{hc^2}{12.6}$$

$V_B = \dots\dots\dots \text{cm}^3$  [2]

(d) The student measures the mass of the beaker on a balance, as shown in Fig. 1.2.

(i) Write down the mass  $m_B$  of the beaker, to the nearest gram.

**Fig. 1.2**

$$m_B = \dots\dots\dots \text{ g [1]}$$

The student fills the beaker to the top with dry sand. He measures the mass  $m$  of the beaker containing the sand.

$$m = \dots\dots\dots 724\text{g} \dots\dots\dots$$

(ii) Calculate the mass  $m_S$  of sand in the beaker. Use the equation  $m_S = (m - m_B)$ .

$$m_S = \dots\dots\dots \text{ g [1]}$$

(iii) Calculate the density  $\rho$  of the sand using the equation

$$\rho = \frac{m_S}{V_B}$$

Include the unit.

$$\rho = \dots\dots\dots \text{ [2]}$$

(e) The student uses a measuring cylinder to measure the volume of dry sand. Draw a diagram of the measuring cylinder and show the line of sight that the student must use to obtain an accurate volume reading.

[1]

[Total: 11]

**[Turn over**

2 A student investigates the position of the image in a plane mirror.

Fig. 2.1 shows the ray-trace sheet that the student uses.

Fig. 2.1

- (a)
- The line **MR** shows the position of a plane mirror. Draw a normal to this line that passes through its centre. Continue the normal so that it reaches the bottom of the ray-trace sheet. Label the normal **NL**. Label the point at which **NL** crosses **MR** with the letter **B**.
  - Draw a line **CD** 5.0 cm below **MR** and parallel to **MR**.
  - Label the point **X** where **CD** crosses **NL**.
  - Draw a line **EF** 5.0 cm below **CD** and parallel to **CD**.
  - Label the point **Y** where **EF** crosses **NL**.

[2]

- (b) Draw a line 7.0 cm long from **B** at an angle of incidence  $\theta_1 = 20^\circ$  to the normal below **MR** and to the left of the normal. Label the end of this line **A**. [1]

- (c) The student places two pins,  $P_1$  and  $P_2$ , on line **AB**. Suggest a suitable distance  $x$  between the pins for this type of ray-trace experiment.

 $x = \dots\dots\dots$  [1]

- (d) The student views the images of pins  $P_1$  and  $P_2$  from the direction indicated by the eye in Fig. 2.1. She places pin  $P_3$  on line **CD** so that the images of  $P_2$  and  $P_1$  appear exactly behind pin  $P_3$ .

She places pin  $P_4$  on line **EF** so that pin  $P_3$ , and the images of  $P_2$  and  $P_1$ , all appear exactly behind pin  $P_4$ . The positions of  $P_3$  and  $P_4$  are shown on Fig. 2.1.

- (i) Measure and record the distance  $a$  from **X** to  $P_3$ .

 $a = \dots\dots\dots$  [1]

- (ii) Measure and record the distance  $b$  from **Y** to  $P_4$ .

 $b = \dots\dots\dots$  [1]

- (iii) Calculate  $\frac{a}{b}$ .

 $\frac{a}{b} = \dots\dots\dots$  [1]

- (e) The student repeats the procedure using an angle of incidence  $\theta_2 = 40^\circ$ . She records the new values of  $a$  and  $b$ .

$a = \dots\dots\dots 4.2 \text{ cm}$

$b = \dots\dots\dots 8.3 \text{ cm}$

Calculate the new value  $\frac{a}{b}$ .

$\frac{a}{b} = \dots\dots\dots [2]$

- (f) State and explain whether the two values of  $\frac{a}{b}$  can be considered to be equal in this experiment.

.....  
..... [1]

- (g) A student carries out this experiment with care. Suggest a practical reason why the results may **not** be accurate.

.....  
..... [1]

[Total: 11]

3 A student investigates resistance.

Fig. 3.1 shows the circuit used.

Fig. 3.1

(a) The student measures the current  $I$  in the circuit.

He places the sliding contact S at C and measures the potential difference (p.d.)  $V_1$  across the resistor R.

The voltmeter and ammeter are shown in Fig. 3.2 and Fig. 3.3.

Fig. 3.2

Fig. 3.3

(i) Write down the readings.  
Include the units for potential difference, current or resistance where appropriate in all parts of the question.

$V_1 = \dots\dots\dots$

$I_1 = \dots\dots\dots$

[2]

(ii) Calculate the resistance  $R_1$  of the resistor using the equation  $R_1 = \frac{V_1}{I_1}$ .

$R_1 = \dots\dots\dots$

[2]

- (b) The student disconnects the voltmeter from terminal B and connects the voltmeter to terminal C.

He places the sliding contact S at a distance  $l = 20.0$  cm from C. He records, in Table 3.1, the reading on the voltmeter.

He repeats the procedure using  $l = 40.0$  cm,  $60.0$  cm,  $80.0$  cm and  $100.0$  cm. His readings are shown in Table 3.1.

**Table 3.1**

$l$ /cm	$V/V$
20.0	0.4
40.0	0.8
60.0	1.1
80.0	1.5
100.0	1.9

Plot a graph of  $V/V$  ( $y$ -axis) against  $l$ /cm ( $x$ -axis). Start both axes at the origin (0,0).

[4]

- (c) Use your value of  $V_1$  from (a)(i) to find the length  $l_R$  of resistance wire that has the same resistance as resistor R. Show clearly on the graph how you obtained the necessary information.

$l_R = \dots\dots\dots$  cm [2]

- (d) The resistance of the resistance wire is proportional to its length. Estimate the resistance of 100 cm of the resistance wire.

estimate  $\dots\dots\dots$  [1]

[Total: 11]

4 A student investigates springs made from different metals.

Plan an experiment to investigate the extension of springs made from different metals.

The following apparatus is available:

- boss, clamp and stand
- metre rule
- springs made from different metals
- selection of loads with hangers.

You can also use other apparatus and materials that are usually available in a school laboratory.

In your plan, you should:

- write a list of suitable metals for the springs
- draw a diagram of the set up you would use
- explain briefly how to carry out the investigation
- state the key variables to keep constant
- draw a table, or tables, with column headings, to show how to display your readings (you are **not** required to enter any readings in the table)
- explain how you would use the readings to reach a conclusion.
