Paper 3 Core Theory

October/November 2023

MARK SCHEME

Maximum Mark: 80

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **13** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

- 1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
- 2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
- 3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
- 4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.
- 5 'List rule' guidance
For questions that require ***n*** responses (e.g. State **two** reasons ...):
 - The response should be read as continuous prose, even when numbered answer spaces are provided.
 - Any response marked *ignore* in the mark scheme should not count towards ***n***.
 - Incorrect responses should not be awarded credit but will still count towards ***n***.
 - Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
 - Non-contradictory responses after the first ***n*** responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

NOTES ABOUT MARK SCHEME SYMBOLS AND OTHER MATTERS

M marks	are method marks upon which further marks depend. For an M mark to be scored, the point to which it refers must be seen in a candidate's answer. If a candidate fails to score a particular M mark, then none of the dependent marks can be scored.
B marks	are independent marks, which do not depend on other marks. For a B mark to score the point to which it refers must be seen specifically in the candidate's answers.
A marks	<p>In general A marks are awarded for final answers to numerical questions.</p> <p>If a final numerical answer, eligible for A marks, is correct, with the correct unit and an acceptable number of significant figures, all the marks for that question are normally awarded. It is very occasionally possible to arrive at a correct answer by an entirely wrong approach. In these rare circumstances, do not award the A marks, but award C marks on their merits. However, correct numerical answers with no working shown gain all the marks available.</p>
C marks	are compensatory marks in general applicable to numerical questions. These can be scored even if the point to which they refer are not written down by the candidate, provided subsequent working gives evidence that they must have known it . For example, if an equation carries a C mark and the candidate does not write down the actual equation but does correct substitution or working which shows that they knew the equation, then the C mark is scored. A C mark is not awarded if a candidate makes two points which contradict each other. Points which are wrong but irrelevant are ignored.
Brackets ()	around words or units in the mark scheme are intended to indicate wording used to clarify the mark scheme, but the marks do not depend on seeing the words or units in brackets e.g. 10 (J) means that the mark is scored for 10, regardless of the unit given.
<u>Underlining</u>	indicates that this <u>must</u> be seen in the answer offered, or something very similar.
OR / or	indicates alternative answers, any one of which is satisfactory for scoring the marks.
e.e.o.o.	means 'each error or omission'.
o.w.t.t.e.	means 'or words to that effect'.
Ignore	indicates that something which is not correct or irrelevant is to be disregarded and does not cause a right plus wrong penalty.

Spelling	Be generous about spelling and use of English. If an answer can be understood to mean what we want, give credit. However, beware of and do not allow ambiguities: e.g. spelling which suggests confusion between reflection / refraction / diffraction or thermistor / transistor / transformer.
Not / NOT	indicates that an incorrect answer is not to be disregarded, but cancels another otherwise correct alternative offered by the candidate i.e. right plus wrong penalty applies.
e.c.f.	means 'error carried forward'. This is mainly applicable to numerical questions, but may occasionally be applied in non-numerical questions if specified in the mark scheme. This indicates that if a candidate has made an earlier mistake and has carried an incorrect value forward to subsequent stages of working, marks indicated by e.c.f. may be awarded, provided the subsequent working is correct.
Sig. Figs.	Answers are normally acceptable to any number of significant figures ≥ 2 . Any exceptions to this general rule will be specified in the mark scheme.
Arithmetic errors	Deduct only one mark if the only error in arriving at a final answer is clearly an arithmetic one. Regard a power-of-ten error as an arithmetic one.
Transcription	Deduct only one mark if the only error in arriving at a final answer is because given or previously calculated data has clearly been misread but used correctly.
Fractions	Only accept these where specified in the mark scheme.
Crossed out work	Work which has been crossed out and not replaced but can easily be read should be marked as if it had not been crossed out.
Use of NR	(# key on the keyboard) Use this if the answer space for a question is completely blank or contains no readable words, figures or symbols.

Question	Answer	Marks
1(a)(i)	3(.0) (m / s)	A2
	any indication on graph or in working of vertical / horizontal line from 6.0 s	C1
1(a)(ii)	16 (m / s)	B1
1(b)(i)	(constant) accelerating / speed increasing	B1
1(b)(ii)	greater acceleration	B1
	line is steeper / greater gradient	B1
1(c)	25 (m)	A3
	$\frac{1}{2} \times 5 \times 10$	(C2)
	(distance =) area under graph OR $\frac{1}{2} \times b \times h$ OR (distance =) speed \times time	(C1)

Question	Answer	Marks
2(a)	energy cannot be created or destroyed OR energy is only transformed or transferred (from one store / form / type to another)	B1
2(b)(i)	30 (%)	A2
	100 – 70	(C1)
2(b)(ii)	electrical car	M0
	greater kinetic energy (output) OR less energy wasted	A1

Question	Answer	Marks
3(a)	2000 (N m)	A3
	1100×1.8	(C2)
	(moment =) force \times (perpendicular) distance	(C1)
3(b)(i)	190 (N)	A3
	($W =$) $\{62 \times 1.2\} \div 0.4$ OR $74.4 \div 0.4$	(C2)
	(moment of spring =) 62×1.2 OR 74.4	(C1)
3(b)(ii)	(length of spring =) 17 (cm)	A2
	(extension =) 1.0 (cm)	(C1)

Question	Answer	Marks
4(a)	31 (N)	A2
	(weight =) mass \times gravitation field strength OR $m \times g$ OR $m \times 9.8$ OR 3.2×9.8	(C1)
4(b)(i)	141(.12) (J) OR 139(.5) (J)	B1
	$3.2 \times 9.8 \times 4.5$ OR 31.36×4.5 OR 31×4.5	B1
	(work =) force \times distance OR ($W =$) $F \times d$	B1
4(b)(ii)	141(.12) (J) OR 139(.5) (J) OR 140 (J)	B1
	work done = gain in (g)PE	B1

Question	Answer	Marks
5(a)	any two from: no sulfur dioxide (emission) OR acid rain (produced) no CO ₂ / greenhouse gases (emitted) OR no / reduces (impact on) global warming renewable (source of energy) no fuel predictable source owtte conserves coal / fossil fuel reserves	B2
5(b)	any two from: suitable locations limited OR locations remote marine ecosystems disrupted difficult to maintain limited production time owtte silt build up electrical transmission difficult disrupts shipping storm damage	B2

Question	Answer	Marks
6(a)	conduction AND convection	B1
	need a medium / particles (to transfer energy)	B1
6(b)	any four from: water particles gain thermal energy / KE (water) particles move apart warm water becomes less dense less dense water rises / more dense water falls (forming a) convection (current)	B4

Question	Answer	Marks
7(a)	oscillating / vibrating/backwards and forwards	B1
7(b)(i)	stopwatch / (stop)clock	B1
7(b)(ii)	540 (m)	A3
	340×1.6	(C1)
	(distance =) speed \times time	(C1)
7(c)	20 – 20 000	B1
	Hz / hertz	B1

Question	Answer	Marks														
8(a)	top diagram ----- diffraction	B1														
	bottom diagram ----- refraction	B1														
8(b)(i)	<u>principal axis</u>	B1														
8(b)(ii)	<u>principal focus</u>	B1														
8(b)(iii)	vertical line from point where rays cross to the principal axis	B1														
8(b)(iv)	1.9 (cm)	B1														
8(b)(v)	<table><tr><td>enlarged</td><td>✓</td></tr><tr><td>diminished</td><td></td></tr><tr><td>same size</td><td></td></tr><tr><td>inverted</td><td>✓</td></tr><tr><td>upright</td><td></td></tr><tr><td>virtual</td><td></td></tr><tr><td>real</td><td>✓</td></tr></table>	enlarged	✓	diminished		same size		inverted	✓	upright		virtual		real	✓	B1
	enlarged	✓														
	diminished															
	same size															
	inverted	✓														
	upright															
	virtual															
real	✓															
		B1														
		B1														

Question	Answer	Marks
9(a)(i)	(prevent) risk of (electric) shock / electrocution	B1
9(a)(ii)	3.1 (A)	A3
	720/230	(C2)
	(current =) power / voltage OR ($I = P / V$)	(C1)
9(b)	468 (cents)	A3
	26×18	(C2)
	(cost =) number of kWh \times cost per kWh	(C1)
	number of kWh = 3797 – 3771 OR 26	(C1)

Question	Answer	Marks
10(a)(i)	(soft) iron	B1
10(a)(ii)	steel	B1
10(a)(iii)	magnet does not attract a non-magnetic material	B1
10(b)	any four from: (when switch closed) there is a complete circuit current in the circuit magnetic effect (of current / in coil) owtte (coil and nail become) electromagnet (springy) iron (strip) attracted to (nail / electromagnet) circuit broken owtte springy iron strip springs back / makes contact (again) owtte	B4

Question	Answer	Marks
11(a)(i)	${}^9_4\text{Be}$	B1
11(a)(ii)	neutron(s)	B1
11(b)(i)	A and B and D	B1
11(b)(ii)	A	B1
11(c)	2 (h)	A2
	3 half lives	(C1)

Question	Answer	Marks
12(a)	at least 4 named	M1
	all 5 in correct order	A1
12(b)	any two from: minor / dwarf planets / Pluto asteroids comets moons / natural satellites	B2
12(c)	Mercury is rocky AND small. (answers maybe in either order)	B1
	Jupiter is gaseous AND large. (answers maybe in either order)	B1
