Cambridge International General Certificate of Secondary Education

## **COMBINED SCIENCE**

Paper 2 Multiple Choice (Extended)

0653/22 May/June 2017 45 minutes

Additional Materials: Multiple Choice Answer Sheet Soft clean eraser Soft pencil (type B or HB is recommended)

# **READ THESE INSTRUCTIONS FIRST**

Write in soft pencil.

Do not use staples, paper clips, glue or correction fluid. Write your name, Centre number and candidate number on the Answer Sheet in the spaces provided unless this has been done for you. DO **NOT** WRITE IN ANY BARCODES.

There are **forty** questions on this paper. Answer **all** questions. For each question there are four possible answers A, B, C and D.

Choose the **one** you consider correct and record your choice in **soft pencil** on the separate Answer Sheet.

## Read the instructions on the Answer Sheet very carefully.

Each correct answer will score one mark. A mark will not be deducted for a wrong answer. Any rough working should be done in this booklet. A copy of the Periodic Table is printed on page 16. Electronic calculators may be used.

This document consists of 16 printed pages.

**1** A person moves their hand away from a hot object.

Which characteristic of living organisms is this?

- A growth
- **B** nutrition
- **C** reproduction
- D sensitivity
- 2 The diagram shows an animal cell under a light microscope.

What is the function of part X?

- **A** to carry out photosynthesis
- **B** to let molecules in and out of the cell
- **C** to store and pass on cell information
- D to support and protect the cell
- 3 The diagram shows an image of a plant cell that has been magnified.

The magnification is  $\times$  200.

What is the length of the actual cell?

**A** 0.2 mm **B** 

0.5 mm

2 mm

С

20 000 mm

D

- 4 Which statement about enzymes is correct?
  - **A** They are killed by high temperatures.
  - **B** They are made from amino acids.
  - **C** They are unaffected by pH.
  - **D** They are used up in biological reactions.
- **5** Which row matches the adaptation of a root hair cell to its function?

|   | adaptation         | function                    |
|---|--------------------|-----------------------------|
| Α | large surface area | uptake of water and glucose |
| В | large surface area | uptake of water and ions    |
| С | small surface area | uptake of water and glucose |
| D | small surface area | uptake of water and ions    |

6 The diagram shows a section through the heart.

The ventricles contract and blood is forced into the arteries.

What is the state of valves 1 and 2 when this happens?

|   | valve 1 | valve 2 |
|---|---------|---------|
| Α | closed  | closed  |
| В | closed  | open    |
| С | open    | closed  |
| D | open    | open    |

7 The diagram shows apparatus at the start of a breathing experiment.

A person breathes in and out through the mouthpiece for a short time.

Which row shows the results?

|   | limewater in tube X | limewater in tube Y |
|---|---------------------|---------------------|
| Α | stays clear         | stays clear         |
| в | stays clear         | turns cloudy        |
| С | turns cloudy        | stays clear         |
| D | turns cloudy        | turns cloudy        |

- 8 How does mucus benefit the gas exchange system?
  - **A** It absorbs carbon monoxide before it reaches the alveoli.
  - **B** It prevents friction between the air and the trachea.
  - **C** It removes the nicotine in cigarette smoke.
  - **D** It traps pathogens.

**9** The diagram shows a seedling with its root and shoot horizontal.

The seedling is kept moist for three days.

Where will the greatest concentration of auxin be found?

- **10** Which substance is at a higher concentration in the blood on the fetal side of the placenta than in the blood on the mother's side of the placenta?
  - **A** amino acids
  - **B** carbon dioxide
  - C glucose
  - **D** oxygen
- **11** Which type of blood cell is affected by the human immuno-deficiency virus (HIV) and what effect does the virus have on those cells?

|   | type of blood cell | effect on the blood cell                |
|---|--------------------|---|
| Α | red                | prevents them carrying oxygen           |
| в | red                | stops them from making the blood clot   |
| С | white              | stops them from performing phagocytosis |
| D | white              | reduces antibody production             |

- **12** What is an ecosystem?
  - **A** a network of inter-connected food chains
  - **B** a specific area in which a plant or an animal lives
  - **C** all the plants and animals living within a specific area
  - **D** the interactions between all living organisms, in a specific area, and their environment

- **13** What is an undesirable effect of overuse of fertilisers in agriculture?
  - A acid rain
  - **B** deforestation
  - **C** eutrophication
  - D global warming
- 14 Which diagram shows how a mixture of dyes in a food colouring are separated?

**15** A mixture contains hydrogen, helium, neon and oxygen.

What describes this mixture?

- A elements and compounds
- B elements only
- **C** molecules and compounds
- D molecules only

|   | chlorine atom | sodium ion |
|---|---------------|------------|
| Α | 2,8,7         | 2,8        |
| В | 2,8,7         | 2,8,8      |
| С | 2,8,8         | 2,8        |
| D | 2,8,8         | 2,8,8      |

**16** Which row describes the electronic structures of a chlorine atom and of a sodium ion?

**17** Aluminium ions have the formula  $Al^{3+}$ .

Oxide ions have the formula  $O^{2-}$ .

What is the formula of aluminium oxide?

- **A** AlO **B** AlO<sub>2</sub> **C** Al<sub>2</sub>O<sub>3</sub> **D** Al<sub>3</sub>O<sub>2</sub>
- **18** Aqueous copper chloride is electrolysed using inert electrodes.

Which row describes what happens at each electrode?

|   | cathode  | anode  |
|---|--|--|
| Α | chloride ions gain electrons to form chlorine    | copper ions lose<br>electrons to form copper     |
| В | chloride ions lose<br>electrons to form chlorine | copper ions gain<br>electrons to form copper     |
| С | copper ions gain<br>electrons to form copper     | chloride ions lose<br>electrons to form chlorine |
| D | copper ions lose<br>electrons to form copper     | chloride ions gain electrons to form chlorine    |

**19** Methane reacts with oxygen, releasing heat.

Which statement explains the energy changes in this reaction?

- A Chemical energy is changed into thermal energy.
- **B** Energy is made in the reaction.
- **C** The heat released increases the temperature of the surroundings.
- **D** The reaction is endothermic.

**20** Magnesium ribbon reacts with dilute hydrochloric acid to form hydrogen gas.

Which change increases the rate of the reaction?

- **A** adding water to the mixture
- **B** trapping the hydrogen gas
- **C** using a lower temperature
- D using powdered magnesium
- 21 In which reactions is the <u>underlined</u> substance oxidised?
  - 1 <u>iron</u> when it rusts
  - 2 methane when it burns in air
  - 3 <u>copper oxide</u> when it reacts with carbon
  - **A** 1, 2 and 3 **B** 1 and 2 only **C** 1 and 3 only **D** 2 and 3 only
- 22 Substance X is warmed with aqueous sodium hydroxide and aluminium.

A gas is produced which turns damp red litmus paper blue.

Which anion is present in X?

- A carbonate
- **B** hydroxide
- **C** nitrate
- D sulfate

**23** The elements in Group VII of the Periodic Table are shown.

fluorine chlorine bromine iodine

astatine

Which statement is not correct?

- **A** Astatine has a lower melting point than iodine.
- **B** Chlorine can displace iodine from an iodide solution.
- **C** Fluorine is more reactive than astatine.
- **D** lodine vapour has a darker colour than fluorine gas.

#### 24 What is an alloy?

- A a compound containing two metallic elements
- **B** a compound containing two non-metallic elements
- **C** a mixture containing two metallic elements
- D a mixture containing two non-metallic elements
- 25 Which pair of substances produces a metal when they are mixed together?
  - A copper and aqueous iron(II) ions
  - B iron and aqueous zinc ions
  - **C** magnesium and aqueous copper(II) ions
  - **D** zinc and aqueous magnesium ions

26 Which pie chart shows the proportions of gases in clean air?

**27** Petroleum is separated into different fractions by fractional distillation.

Which statement about fractional distillation is not correct?

- A Larger molecules have stronger covalent bonds between their atoms.
- **B** The boiling point of hydrocarbons increases with the size of the molecules.
- **C** The different fractions have different boiling points.
- **D** The smaller molecules have weaker intermolecular attractive forces between them.

**28** The diagram shows the speed-time graph for a vehicle.

What is the acceleration of the vehicle, and how far does it travel in 30 s?

|   | acceleration<br>m/s <sup>2</sup> | distance<br>travelled/m |
|---|----------------------------------|-------------------------|
| Α | 0.20                             | 180                     |
| В | 0.20                             | 270                     |
| С | 0.40                             | 180                     |
| D | 0.40                             | 270                     |

29 Which row shows the unit for force, the unit for mass and the unit for weight?

|   | force | mass | weight |
|---|-------|------|--------|
| Α | kg    | kg   | Ν      |
| В | kg    | Ν    | kg     |
| С | Ν     | kg   | Ν      |
| D | Ν     | Ν    | kg     |

**30** A spring obeys Hooke's law. A load of 10 N hangs from the spring and causes the spring to extend by 12 mm.

Two springs, identical to the first one, are now joined as shown. A load of 5.0 N is hung from the springs.

What is the total extension of the combination of the two springs?

**A** 3.0 mm **B** 6.0 mm **C** 12 mm **D** 24 mm

**31** A brick of mass of 3.0 kg rests on a shelf. The brick drops off the shelf. The brick hits the ground at a speed of 8.0 m/s. Air resistance can be ignored.

The acceleration of free fall g is  $10 \text{ m/s}^2$ .

How much kinetic energy did the brick have just before it hit the ground, and how much potential energy did the brick have when it was on the shelf?

|   | kinetic energy<br>before hitting<br>ground/J | potential<br>energy on shelf<br>/ J |
|---|--|-------------------------------------|
| Α | 24   | 24                                  |
| В | 24   | 96                                  |
| С | 96   | 0                                   |
| D | 96   | 96                                  |

**32** Two cylinders contain the same type of gas.

In which case **must** the gas in one cylinder be at a higher temperature than the gas in the other cylinder?

- **A** In one cylinder the gas molecules are moving faster.
- **B** In one cylinder the gas occupies a smaller volume.
- **C** In one cylinder there is a greater number of gas molecules.
- **D** In one cylinder there is a greater spacing between the gas molecules.
- **33** Which surface is a better absorber of infra-red radiation, and which surface is a better emitter of infra-red radiation?

|   | better absorber | better emitter |
|---|-----------------|----------------|
| Α | black surface   | black surface  |
| В | black surface   | white surface  |
| С | white surface   | black surface  |
| D | white surface   | white surface  |

- 34 What can cause the speed of a wave to change?
  - A either reflection or refraction
  - **B** reflection only
  - **C** refraction only
  - **D** neither reflection nor refraction
- **35** The diagram represents the surface of a transparent liquid. Two rays of light are travelling within the liquid. They both reach the surface. The path of each ray is shown.

- 36 Which type of electromagnetic wave is used in airport security scanners?
  - A gamma-rays
  - **B** microwaves
  - **C** radio waves
  - D X-rays
- **37** An electronic circuit in a fire alarm makes a loudspeaker vibrate alternately at two different frequencies.

Which pair of frequencies is suitable to use in the alarm to alert people to the danger of fire?

- A 1.5 Hz and 15 Hz
- **B** 15 Hz and 150 000 Hz
- **C** 150 Hz and 15000 Hz
- **D** 150 000 Hz and 15 000 000 Hz
- **38** Four wires are made from the same material but have different lengths and diameters.

Which wire has the least resistance?

|   | length<br>/cm | diameter<br>/ mm |
|---|---------------|------------------|
| Α | 50            | 0.10             |
| В | 50            | 0.20             |
| С | 100           | 0.10             |
| D | 100           | 0.20             |

**39** A 12 V power supply is connected to a  $6.0 \Omega$  resistor. This causes a current in the resistor.

How much thermal energy is produced in the resistor in 5.0 minutes?

**A** 120 J **B** 600 J **C** 7200 J **D** 21600 J

**40** The diagram shows a circuit containing four resistors and four ammeters.

Which ammeter has the smallest reading?

Permission to reproduce items where third-party owned material protected by copyright is included has been sought and cleared where possible. Every reasonable effort has been made by the publisher (UCLES) to trace copyright holders, but if any items requiring clearance have unwittingly been included, the publisher will be pleased to make amends at the earliest possible opportunity.

To avoid the issue of disclosure of answer-related information to candidates, all copyright acknowledgements are reproduced online in the Cambridge International Examinations Copyright Acknowledgements Booklet. This is produced for each series of examinations and is freely available to download at www.cie.org.uk after the live examination series.
