## Cambridge IGCSE<sup>™</sup>

## **COMBINED SCIENCE**

Paper 2 Multiple Choice (Extended)

0653/23 May/June 2021 45 minutes

You must answer on the multiple choice answer sheet.

You will need: Multiple choice answer sheet Soft clean eraser Soft pencil (type B or HB is recommended)

## INSTRUCTIONS

- There are **forty** questions on this paper. Answer **all** questions.
- For each question there are four possible answers **A**, **B**, **C** and **D**. Choose the **one** you consider correct and record your choice in soft pencil on the multiple choice answer sheet.
- Follow the instructions on the multiple choice answer sheet.
- Write in soft pencil.
- Write your name, centre number and candidate number on the multiple choice answer sheet in the spaces provided unless this has been done for you.
- Do **not** use correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.

## INFORMATION

- The total mark for this paper is 40.
- Each correct answer will score one mark.
- Any rough working should be done on this question paper.
- The Periodic Table is printed in the question paper.

This document has 16 pages. Any blank pages are indicated.

1 Which row links a specialised cell to its correct function?

	specialised cell	function	
Α	ciliated cell	photosynthesis	
В	palisade cell	movement of mucus	
С	red blood cell	blood clotting	
D	sperm cell	reproduction	

2 The diagrams represent four similar animal cells immersed in blood plasma.

The black dots represent molecules of dissolved oxygen.

Which cell will have oxygen molecules diffusing into it most rapidly?

**3** The diagram shows the effect of increasing the pH of an enzyme-controlled reaction.

What is happening at point X?

- 1 denaturation
- 2 greatest number of enzyme-substrate complexes
- 3 increased kinetic energy
- **A** 1 only **B** 2 only **C** 1 and 3 **D** 2 and 3

4 The leaves of plants produce carbohydrates during photosynthesis.

How are these carbohydrates used by the plants?

	for respiration	to make other substances	for storage
Α	$\checkmark$	X	x
В	X	X	$\checkmark$
С	$\checkmark$	X	$\checkmark$
D	$\checkmark$	$\checkmark$	1

**5** A person has a low level of haemoglobin.

Which row identifies the blood cell that transports oxygen and the nutrient the person is deficient in?

	type of blood cell	nutrient deficiency	
Α	red	calcium	
в	red	iron	
С	white	calcium	
D	white	iron	

6 Most food molecules need to be digested to allow them to be absorbed into the blood.

Which row shows the type of digestion and the change needed to allow absorption to happen?

	type of digestion	change to food molecules
Α	chemical	large molecules to small, insoluble molecules
в	chemical	large molecules to small, soluble molecules
С	mechanical	large molecules to small, soluble molecules
D	mechanical	large molecules to small, insoluble molecules

7 The diagram shows a cross-section of a root hair cell.

Which row identifies the part of the cell with the larger surface area and the correct function?

	part of cell	function
Α	Х	water and glucose uptake
в	Х	water and ion uptake
С	Y	water and glucose uptake
D	Y	water and ion uptake

**8** What is the maximum number of carbon dioxide molecules produced when four glucose molecules are used in aerobic respiration?

<b>A</b> 6	<b>B</b> 12	<b>C</b> 24	<b>D</b> 48
------------	-------------	-------------	-------------

**9** A plant in a pot was placed on its side for four days.

Which row describes the gravitropic response in the root and shoot?

	root	shoot	
A positive		negative	
в	negative	positive	
С	negative	negative	
<b>D</b> positive		positive	

**10** During human reproduction an egg fuses with a sperm.

Sometimes the zygote splits into two and produces twins.

Which row describes the formation of these twins?

	original zygote produced by	twins	
Α	asexual reproduction	genetically identical	
в	sexual reproduction	genetically identical	
С	asexual reproduction	genetically different	
D	sexual reproduction	genetically different	

**11** The diagram shows a wind-pollinated flower.

Which label identifies a stigma?

12 In which food chain does the final consumer receive the most energy from the producer?

Α	producer	$\rightarrow$	primary consumer	$\rightarrow$	secondary consumer	$\rightarrow$	tertiary consumer	$\rightarrow$	quaternary consumer
в	producer	$\rightarrow$	primary consumer	$\rightarrow$	secondary consumer	$\rightarrow$	tertiary consumer		
С	producer	$\rightarrow$	primary consumer	$\rightarrow$	secondary consumer				
D	producer	$\rightarrow$	primary consumer						

- 13 Which process takes carbon dioxide out of the air?
  - A combustion
  - B decomposition
  - **C** photosynthesis
  - D plant respiration

**14** The melting point and boiling point of oxygen and nitrogen are shown.

	melting point /°C	boiling point /°C
oxygen	-219	-183
nitrogen	-210	-196

A sealed flask contains a mixture of oxygen and nitrogen.

Which diagram shows the arrangement of oxygen and nitrogen particles at -190 °C?

**15** During a chromatography investigation, colour X moves 4.5 cm up the chromatography paper from the base line.

The  $R_{\rm f}$  value of colour X is 0.59.

What is the distance moved by the solvent in this experiment?

**A** 2.7 cm **B** 4.5 cm **C** 7.6 cm **D** 10.3 cm

- 16 What is an example of a physical change?
  - A carbon dioxide turning limewater milky
  - **B** the crystallisation of copper(II) sulfate from solution
  - **C** the electrolysis of molten lead(II) bromide
  - **D** the thermal decomposition of calcium carbonate
- **17** Water has the chemical formula  $H_2O$ .

Which statement is correct?

- A Pure water is a mixture because it contains hydrogen and oxygen.
- **B** Pure water is an element because it contains only one type of molecule.
- **C** Salt water is a compound because it contains salt and water.
- **D** Salt water is a mixture because it contains salt and water.

**18** When water boils it changes from a liquid to a gas.

Which statement about this process is correct?

- **A** It is endothermic because it requires energy to break covalent bonds.
- **B** It is endothermic because energy is needed to break attractive forces between molecules.
- **C** It is exothermic because it requires energy to break attractive forces between atoms.
- **D** It is exothermic because energy is given out when bonds form.
- **19** In the reaction between an acid and a metal, the rate of reaction decreases as the reaction proceeds.

A student suggests three reasons why the rate of this reaction decreases.

- 1 The concentration of the acid decreases as it gets used up.
- 2 The energy needed to break bonds is used up as the products form.
- 3 The surface area of the metal decreases as it gets smaller.

Which reasons are correct?

A 1, 2 and 3 B 1 and 2 only C 1 and 3 only D 2 and 3 only

20 Iron is extracted from its oxide using carbon monoxide. The equation is shown.

 $Fe_2O_3$  + 3CO  $\rightarrow$  2Fe + 3CO<sub>2</sub>

Which row identifies the reducing agent and explains how it acts as a reducing agent?

	reducing agent	explanation
Α	$Fe_2O_3$	it loses mass to become Fe
в	$Fe_2O_3$	it loses oxygen to become Fe
С	со	it gains mass to become CO <sub>2</sub>
D	со	it removes oxygen from $Fe_2O_3$

- **21** Substances that react together to make zinc salts are listed.
  - 1 zinc carbonate and hydrochloric acid
  - 2 zinc oxide and sulfuric acid
  - 3 zinc and nitric acid
  - 4 zinc hydroxide and hydrochloric acid

Which substances produce water when they react?

**A** 1, 2 and 3 **B** 1, 2 and 4 **C** 1 and 2 only **D** 3 and 4

- 22 Which two substances form a white precipitate when they are mixed?
  - A barium chloride and hydrochloric acid
  - **B** barium chloride and nitric acid
  - C silver nitrate and hydrochloric acid
  - D silver nitrate and nitric acid
- 23 Aqueous chlorine is added to aqueous sodium bromide.

Which statement about the reaction is correct?

- **A** The solution turns orange because bromine is formed.
- **B** The solution turns orange because bromide ions are reduced.
- **C** The solution remains colourless because bromine is less reactive than chlorine.
- **D** The solution remains colourless because chlorine is reduced.
- **24** How does the character of the elements change across a period of the Periodic Table from left to right?
  - A acidic to basic
  - B basic to acidic
  - C metallic to non-metallic
  - D non-metallic to metallic

**25** Four metals, W, X, Y and Z, are added to aqueous solutions of their salts.

W displaces Y.

Y displaces X.

Z displaces Y but does not displace W.

Which row shows the reactivity order of the metals?

	least reactive			most reactive		
Α	Х	Y	Z	W		
в	х	Z	Y	W		
С	W	Y	Z	х		
D	W	Z	Y	Х		

- 26 Which statement about greenhouse gases is correct?
  - **A** Greenhouse gases cause acid rain.
  - **B** The combustion of fossil fuels produces greenhouse gases.
  - **C** Nitrogen is a greenhouse gas.
  - **D** Greenhouse gases are removed from the atmosphere by respiration.
- 27 Which type of compound contains only carbon and hydrogen?
  - A carbohydrate
  - B carbonate
  - C hydrocarbon
  - D hydroxide
- 28 Which change cannot be caused by a force acting on an object?
  - A change of mass
  - B change of motion
  - **C** change of shape
  - D change of size

**29** Diagram 1 is a distance–time graph.

Diagram 2 and diagram 3 are speed-time graphs.

Which of the diagrams represents the motion of an object moving with a non-zero constant acceleration?

**A** 1 and 3 **B** 1 only **C** 2 only **D** 3 only

**30** A student does 10 J of work when lifting an object through a vertical distance of 2.0 m.

What is the size of the force that the student exerts on the object?

**A** 0.20N **B** 5.0N **C** 12N **D** 20N

- **31** Which source of energy is non-renewable?
  - A chemical energy stored in fossil fuels
  - B energy stored in waves
  - **C** energy stored in water behind a hydroelectric dam
  - **D** wind energy
- 32 Cold water evaporates as molecules leave it.

Which molecules leave the water and from which part of the water do they leave?

	molecules that leave the water	where they leave from	
Α	least energetic	the surface only	
В	least energetic	throughout the water	
С	most energetic	the surface only	
D	most energetic	throughout the water	

**33** A heater creates a convection current in a room.

What happens to air as it is heated?

- A It contracts and its density decreases.
- **B** It contracts and its density increases.
- **C** It expands and its density decreases.
- **D** It expands and its density increases.
- 34 Which row gives an example of a transverse wave and a longitudinal wave?

	transverse	longitudinal	
Α	light wave	radio wave	
В	radio wave	sound wave	
С	sound wave	light wave	
D	sound wave	radio wave	

**35** Which diagram shows a converging lens being used to produce the largest virtual image?

(Every point labelled F is a principal focus.)

**36** The speed of sound in air is approximately 330 m/s.

The speed of sound in water is approximately 1500 m/s.

What is a possible speed of sound in solid iron?

- **A** 120 m/s **B** 330 m/s **C** 1200 m/s **D** 5100 m/s
- **37** The diagram represents a circuit that includes a battery, an ammeter, a voltmeter and a variable resistor.

What happens to the readings on the meters as the resistance of the variable resistor is increased?

	ammeter reading	voltmeter reading	
Α	decreases	decreases	
в	decreases	stays constant	
С	increases	decreases	
D	increases	stays constant	

**38** Which combination of resistors has a combined resistance of  $4.0 \Omega$ ?

**39** A lamp is labelled 12 V, 25 W.

How much electrical energy does the lamp transfer in 4.0 minutes when it is operating at its normal brightness?

**A** 100 J **B** 1200 J **C** 6000 J **D** 72000 J

**40** An air conditioner and a television are both connected to the same electrical circuit.

The current in the air conditioner is 9.0 A and the current in the television is 2.0 A.

Several different fuses are available.

Which fuse should be connected at X?

	<b>A</b> 1A	<b>B</b> 3A	<b>C</b> 7A	<b>D</b> 13A
--	-------------	-------------	-------------	--------------
