Paper 6 Alternative to Practical

October/November 2021

MARK SCHEME

Maximum Mark: 40

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **8** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

1	Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
2	The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
3	Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
4	The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.
5	<p><u>'List rule' guidance</u></p> <p>For questions that require <i>n</i> responses (e.g. State two reasons ...):</p> <ul style="list-style-type: none"> The response should be read as continuous prose, even when numbered answer spaces are provided. Any response marked <i>ignore</i> in the mark scheme should not count towards <i>n</i>. Incorrect responses should not be awarded credit but will still count towards <i>n</i>. Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should not be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response. Non-contradictory responses after the first <i>n</i> responses may be ignored even if they include incorrect science.

6 Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Mark scheme abbreviations

- ; separates marking points
- / alternative responses for the same marking point
- ecf error carried forward
- AVP any valid point
- ORA or reverse argument
- AW alternative wording
- underline actual word given must be used by candidate (grammatical variants accepted)
- () the word / phrase in brackets is not required but sets the context

Question	Answer	Marks
1(a)	<i>any two from:</i> the animal from the cold climate / the bear, has: ORA thick(er) / long(er) / more, fur ; a short(er) / no, tail ; (all) legs of equal length / short relative to body size ; small(er) eyes (relative to size of animal) ;	2
1(b)(i)	88 ; 77 ;	2
1(b)(ii)	16 AND 23 ;	1
1(c)	linear temperature scale such that points cover more than 50% of grid ; points for small beaker plotted correctly ; points for large beaker plotted correctly ; smooth, lines / curves, of best-fit drawn ;	4
1(d)	<i>any two from:</i> temperature decreases (with time) (for both) ; (temperature change in) small beaker, decreases faster / decreases more / cools more ; ORA temperature of large beaker is (always) higher ;	2
1(e)	small animal / animal from hot climate AND temperature change in larger beaker is smaller / slope of graph is less steep ; ORA	1
1(f)	use same starting temperature of water / use higher starting temperature / increase measurement time ;	1

Question	Answer	Marks
2(a)(i)	measuring cylinder / syringe ;	1
2(a)(ii)	carbon dioxide ;	1
2(a)(iii)	green solid ; blue solution ;	2
2(a)(iv)	<i>any three from:</i> heat (solution) ; until crystals start to form / until saturated / to reduce the volume / to evaporate (the solution) ; idea of leaving (after heating) to cool ; filter crystals from solution / dry crystals on filter paper ;	3
2(b)(i)	(light) blue precipitate ; (dissolves into a) dark blue solution ;	2
2(b)(ii)	aqueous barium nitrate AND dilute nitric acid ;	1
2(c)(i)	idea of preventing contamination from the wire ;	1
2(c)(ii)	(yellow indicates) it has sodium (ions) in it / the colour should just be (blue-)green / flame contains yellow / not a single colour ;	1
2(c)(iii)	it is hotter / higher temperature / does not leave soot on the wire / heats faster ;	1

Question	Answer	Marks
3(a)(i)	eyes level with water level / looks perpendicular (to the surface of the water) / puts measuring cylinder on flat surface / reads from bottom of meniscus ;	1
3(a)(ii)	74.0 ; 78.5 ;	2
3(a)(iii)	4.5 (cm ³) ;	1
3(b)	$1.9 \div 4.5 = 0.4222222$; correct answer to 2 sig. figs. 0.42 (g / cm ³) ;	2
3(c)	to immerse the cork / to make it sink completely under the water / AW ;	1

Question	Answer	Marks
4	<p>one from each section and then any other two marks</p> <p>1. apparatus stop-watch / timer / (stop-)clock / chronometer ; balance ;</p> <p>2. method wet sample(s) of material(s) / dip into water ; spread flat / hang up ; use a fan / put in warm place / put in oven / place in specified outdoor conditions, e.g. sun, wind ; safety precaution specific to, heating apparatus / use of fan / cutting ;</p> <p>3. measurements measure mass of wet sample at start ; measure mass of sample after a specified amount of time / measure time taken for a specific mass to evaporate ;</p> <p>4. variables to be controlled fabric surface area / (specified) size of fabric ; temperature OR stated drying, environment / place / conditions ;</p> <p>5. processing and use of results (repeat each experiment and) calculate average ; the one with shortest drying time or most mass lost has <u>the fastest rate of evaporation</u> ORA ;</p>	7
