UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

## MARK SCHEME for the October/November 2008 question paper

## 0680 ENVIRONMENTAL MANAGEMENT

0680/01

Paper 1, maximum raw mark 60

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

		(ii)	poor/good buildings; poor/good any aspect of aftercare; poor/good war distance of epicentre; population density diffs; time of day diffs; rich/ dev/developing; AVP							

- 4 (a) (i) large no of (big) rivers; low lying country/mainly delta; surrounded by mountains; high, eq. rainfall/monsoon rains/cyclones; snow, eq. melt; any [3]
  - (ii) less rain now intercepted; less absorbed (by roots); silting up; therefore increased runoff; therefore increased river flow;
     [3]
  - (b) (i) dams; levees/embankments; floating houses; terraces; drainage channels; any [2]
    - (ii) early warning; good after care; houses on stilts/high ground; sand bags; AVP [2]
- **5** (a) (marking points in italics)

	Advantage	Disadvantage
chemical fertilisers	increase productivity	cause water pollution/details
pesticide	increase crop production; kill harmful insects (eq.)	damage wildlife by getting into food chain or depriving predator species of food
machinery	makes farming more efficient and boosts yields	uses fossil fuels/emits carbon dioxide expensive/loss of jobs/noise pollution/soil compaction/ avp
monocultures	increase crop production	increased soil erosion/exhaustion/decrease in nutrients/spread of disease/ruin if crop fails
