Paper 2

October/November 2018

1 hour 45 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer **both** questions.

Electronic calculators may be used.

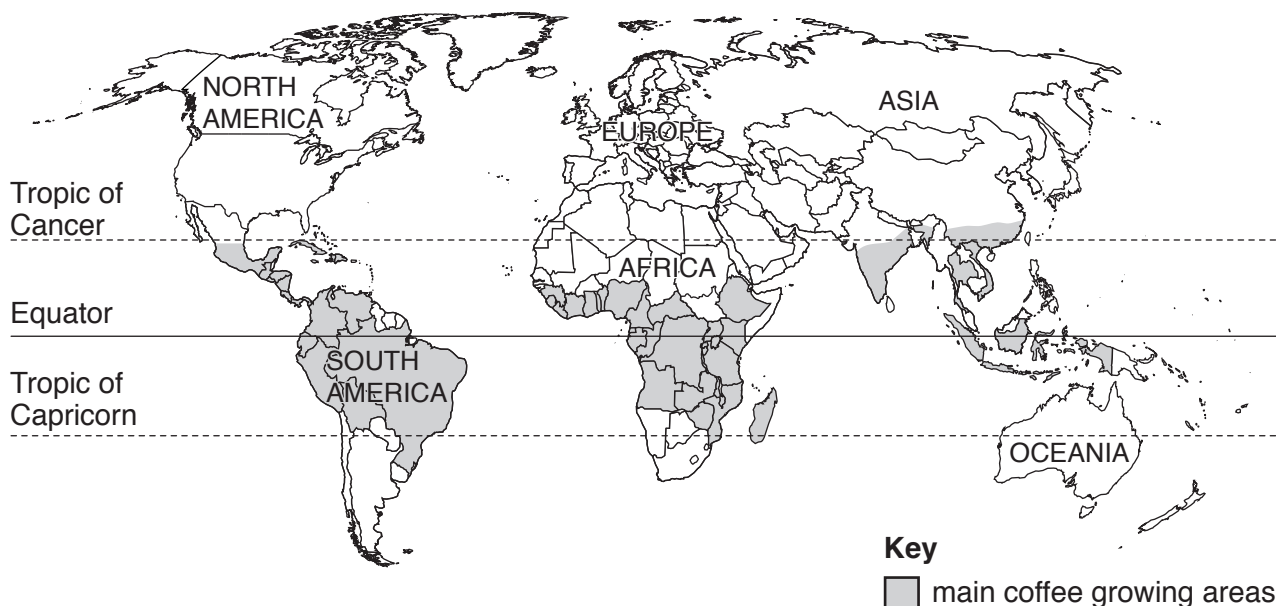

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of **15** printed pages and **1** blank page.

1 Coffee is a major world crop. The main coffee growing areas are shown on the map.

(a) (i) Describe the distribution of the main coffee growing areas shown on the map.

.....

.....

.....

.....

..... [2]

(ii) There are four common species of coffee grown for coffee bean production.

The table shows a summary of their properties.

properties of coffee species	coffee species			
	<i>Coffea arabica</i>	<i>Coffea liberica</i>	<i>Coffea canephora</i>	<i>Coffea stenophylla</i>
required soil pH range	5.0–7.0	5.0–6.5	4.5–7.0	5.0–7.0
leaf size	medium	large	medium	medium
cold resistance	poor	adequate	good	poor
yield	adequate	poor	good	poor
flavour	good	poor	poor	poor
disease resistance	poor	good	good	adequate

Circle the species of coffee that can be grown in the widest range of soil pH.

Coffea arabica

Coffea liberica

Coffea canephora

Coffea stenophylla

(iii) Growing coffee outside the required pH range will reduce plant growth.

Suggest **one** reason for this.

.....
.....[1]

(iv) Name **two** factors that affect the pH of a soil.

1

2

.....[2]

(v) A farmer is considering growing coffee on a large area of land.

Some information about the area of land was recorded.

<p style="text-align: center;">SITE ANALYSIS</p> <p>site: slightly sloping</p> <p>soil: good drainage</p> <p>soil pH: 6.0</p> <p>nutrient level: high</p> <p>climate: cool at night</p>
--

Suggest which species of coffee the farmer should grow.

Use the site analysis information and the table from (ii) to explain your answer.

species

explanation

.....

.....

.....

.....[3]

(b) (i) The photograph shows an area where coffee is being grown.

Circle the term which best describes this type of farming.

**commercial
croplands**

**commercial
grazing lands**

**subsistence
croplands**

**subsistence
grazing lands**

[1]

(ii) This type of farming may also be described as intensive.

Define the term *intensive farming*.

.....

.....

.....

..... [2]

(iii) A coffee farmer is planning to increase the level of mechanisation they use to harvest the crop.

Give **one** advantage and **one** disadvantage of increased mechanisation.

advantage

.....

disadvantage

..... [2]

- (c) (i) Coffee grown without the use of artificial pesticides can be sold at a higher price.

Explain how pests might be controlled without the use of artificial pesticides.

.....
.....
.....
.....
.....
..... [3]

- (ii) Coffee grown with artificial pesticides costs 1.10 USD per kg.

Coffee grown without artificial pesticides costs 20% more.

Calculate the cost of this coffee.

..... USD per kg [1]

- (iii) Suggest why some people might be against the use of artificial pesticides on a coffee crop.

.....
.....
.....
.....
.....
.....
.....
..... [4]

(iv) Rust disease is a major threat to coffee crops because plants with the disease die.

Some scientists suggest the way to control rust disease in coffee is to use genetic engineering.

Explain how genetic engineering might be a solution to this problem.

.....
.....
.....
.....[2]

(v) Suggest **three** reasons why some people might be against the use of genetic engineering.

1
.....
2
.....
3
.....[3]

(d) (i) In South America trees have been removed to grow more coffee.

Describe the impact the removal of trees may have on the local ecosystem.

.....
.....
.....
.....
.....
.....
.....
.....
.....
.....[4]

2 The graph shows the worldwide extraction of materials from mines between 1980 and 2015.

(a) (i) Use the graph to estimate the percentage increase in the worldwide extraction of construction materials from mines between 1980 and 2015.

Circle your answer.

- 30% 50% 70% 100%

[1]

(ii) Use the graph to identify the material that has been extracted in the largest quantity. Give reasons why the extraction of this material has continued to increase.

material

reasons

.....

.....

.....

.....

[3]

- (iii) The types and quantities of metals extracted between 1980 and 2015 have changed in their relative proportions.

Suggest reasons for this.

.....
.....
.....
.....
.....
.....
.....[3]

- (b) (i) Industrial processes produce waste. These waste products have a number of negative impacts.

Suggest **three** ways the production of waste products could be reduced.

1

.....

2

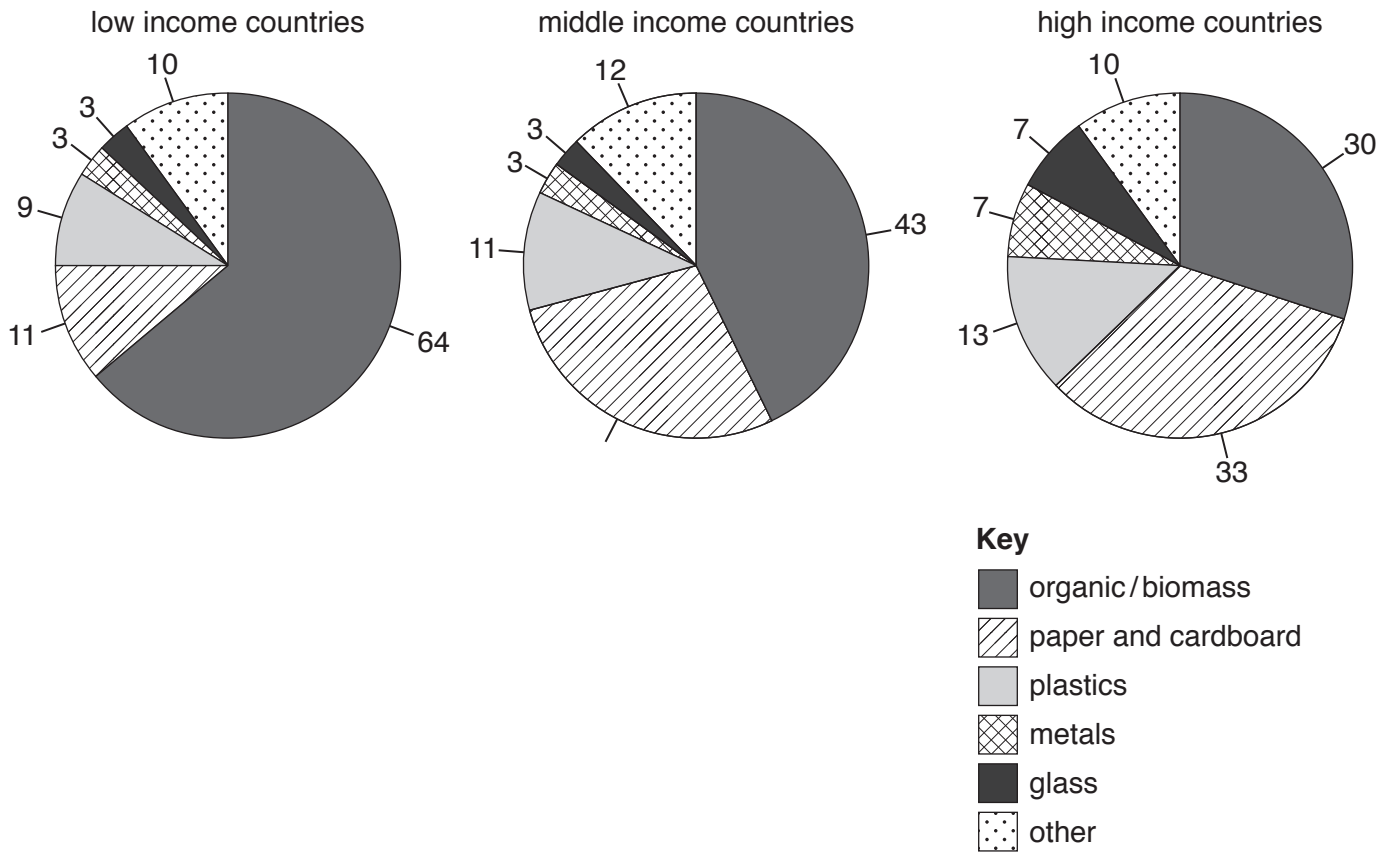

.....

3

.....[3]

- (ii) Research shows that the wealth of a country has an impact on the type of household waste that it produces.

The pie graphs show the percentage of different materials in household waste from low, middle and high income countries.

Calculate the percentage of paper and cardboard waste produced in a middle income country.

.....[1]

- (iii) Rank the top three types of household waste produced in low income countries and high income countries from highest to lowest.

		rank	type of waste	
			low income country	high income country
highest	↓	1st		
		2nd		
		3rd		
lowest				

[2]

- (iv) Describe the differences in the percentage of organic waste and paper and cardboard waste produced by low, middle and high income countries.

organic waste

.....

paper and cardboard waste

.....

[2]

- (v) Suggest reasons for the differences described in (iv).

organic waste

.....

paper and cardboard waste

.....

[2]

(vi) Many governments have plans to reduce the volume of waste entering landfill sites.

This newspaper article describes a new scheme.

A new scheme has been set up to produce compost from organic waste.

The new scheme should create 1200 new jobs, 400 in collection activities and 800 in the processing of compost.

Workers will collect 700 tonnes of organic waste per day, which will produce 50 000 tonnes of compost per year. The new employer will provide workers with health insurance, free meals and access to a child day-care centre.

Benefits from the scheme will include a cheap supply of compost, an organic fertiliser, that will improve the condition of the soil and reduce the need for irrigation.

Describe **three** benefits to the local people from this new scheme.

- 1
 -
 - 2
 -
 - 3
 -
- [3]

(vii) Suggest how spreading compost on the soil surface would reduce the need for irrigation.

-
-[1]

(viii) Name another useful resource that could be produced from this organic waste.

-[1]

- (c) (i) Building regulations in some high income countries require office buildings to be designed so that they require fewer resources when in use.

Suggest **four** ways in which the design of the building may help to do this.

1

.....

2

.....

3

.....

4

.....

[4]

- (ii) Some countries do **not** require office buildings to be designed so that they require fewer resources when in use.

Suggest **three** reasons why.

1

.....

2

.....

3

.....

[3]

- (d) (i) Some countries have large supplies of natural gas. They export this gas to other countries that have a shortage of supply.

Suggest **two** benefits and **two** risks to a country that relies on buying gas from other countries to meet their own needs.

benefit 1

.....

benefit 2

.....

risk 1

.....

risk 2.....

.....

[4]

- (ii) State **one** advantage of using methane for electricity generation compared with using coal.

.....

.....[1]
