Paper 2 Algorithms, Programming and Logic
October/November 2023
MARK SCHEME
Maximum Mark: 75

## Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.
Cambridge International is publishing the mark schemes for the October/November 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

## Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

## GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2 :
Marks awarded are always whole marks (not half marks, or other fractions).

## GENERIC MARKING PRINCIPLE 3:

Marks must be awarded positively:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

## GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

## GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:
Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

| Question | Answer | Marks |
| :---: | :--- | ---: |
| 1 | A | 1 |

| Question | Answer | Marks |
| :---: | :--- | ---: |
| 2 | B | 1 |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 3(a) | One mark for each correct line from description to pseudocode keyword | 4 |
| 3(b) | One mark for each point (max two) <br> - data is stored permanently <br> - data can be moved to another computer <br> - another copy of data can be made and stored//accessed elsewhere // backup copy | 2 |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 4(a) | One mark for each point <br> - type check <br> - range check | 2 |
| 4(b) | One mark for each point (max five) <br> - use of loop for check <br> - checking for whole number <br> - checking for number greater than or equal to one <br> - ... and less than or equal to six <br> - Appropriate error/reinput message <br> - ability to reinput value <br> Example: <br> WHILE Seats < 1 OR Seats > 6 OR Seats <> ROUND(Seats, 0) DO OUTPUT "Please enter a valid number of seats " INPUT Seats <br> ENDWHILE | 5 |
| 4(c) | One mark for correct test data, one mark for corresponding reason <br> Example: <br> 7, abnormal data to show that this value would be rejected | 2 |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 5(a) | One mark for each error identified and correction given <br> - Line 06 Password should be NewPassword <br> - Line 11 And should be OR <br> - Line 16 Input should be output | 3 |

Question

| Question | Answer |  |  |  | Marks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6(c) | One mark for correct gate and one mark for correct truth table <br> NOR |  |  |  | 2 |
|  | A | B | X |  |  |
|  | 0 | 0 | 1 |  |  |
|  | 0 | 1 | 0 |  |  |
|  | 1 | 0 | 0 |  |  |
|  | 1 | 1 | 0 |  |  |
| 6(d) |  |  |  | as shown. | 5 |

| Question | Answer | Marks |
| :---: | :--- | ---: |
| 7 | one mark for first description one mark for matching difference max four <br> $\bullet$ <br>  <br> $\bullet$ <br>  <br>  <br>  <br> $\bullet$ <br> local variables - scope is a defined block of code/subroutine/procedure/function <br> - local variables - scope is the whole program <br> global variables - value cannot be changed elsewhere in the program | 4 |

| Question | Answer |  |  |  |  | Marks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 8(a) | Accept | Reject | Partok | Error | OUTPUT | 5 |
|  | 0 | 0 |  |  |  |  |
|  | 1 |  | Y |  |  |  |
|  | 2 |  | Y |  |  |  |
|  | 3 |  | Y |  |  |  |
|  |  | 1 | N |  |  |  |
|  | 4 |  | Y |  |  |  |
|  | 5 |  | Y |  |  |  |
|  | 6 |  | Y |  |  |  |
|  | 7 |  | Y |  |  |  |
|  |  | 2 | N |  |  |  |
|  | 8 |  | Y |  |  |  |
|  | 9 |  | Y |  |  |  |
|  | 10 |  | Y | 20 |  |  |
|  |  |  |  |  | Too many rejected 20\% error |  |
|  | One mark for each column |  |  |  |  |  |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 8(b) | One mark for each point max three <br> - after the Input box // before the first decision box <br> - insert a process box <br> - to convert the input to upper case <br> OR <br> - change the first decision / add another decision box <br> - to accept 'y' as well <br> - by adding OR Partok = 'y' | 3 |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 9(a) | Records: 14 Fields: 5 | 2 |
| 9(b)(i) | Species/Description | 1 |
| 9(b)(ii) | Long names that could be easily misspelt // species or description could be duplicated | 1 |
| 9(b)(iii) | Easy to validate // always unique | 1 |
| 9(c) | One mark for each correct row or column  <br> True silver white laced top half and black lower half <br> Brown eared brown with ear tufts | 2 |
| 9(d) | One mark for each correct addition <br> SELECT Species <br> FROM PheasantList <br> WHERE Breeding or WHERE Young $=0$ <br> AND Young $=0$; AND Breeding; | 4 |

| Question | Answer | Marks |
| :---: | :---: | :---: |
| 10 | - AO2 (maximum 9 marks) <br> - AO3 (maximum 6 marks) <br> Data Structures required names shown underlined must be used as given in the scenario <br> 2D Array or list Temperatures <br> Variables MaxDay, MinDay, AvDay, MaxWeek, MinWeek, AvWeek <br> Requirements (techniques) <br> R1 Find maximum and minimum temperatures for each day and calculates the average daily temperature (searching, totalling) <br> R2 Find maximum and minimum temperatures for week and calculates the average weekly temperature (nested searching, totalling) <br> R3 outputs for each day name, the rounded values for maximum temperature, minimum temperatures and average temperature. Outputs for the week the rounded values for maximum temperature, minimum temperatures and average temperature (output with appropriate messages and rounded values) <br> Example 15-mark answer in pseudocode: ```// meaningful identifier names and appropriate data structures to store the data required DECLARE DayCounter, HourCounter : INTEGER DECLARE AvDay, AvWeek, MaxDay, MinDay, MaxWeek, MinWeek : REAL DECLARE DayTotal, WeekTotal : REAL DECLARE Day : STRING CONSTANT Hours \leftarrow }2 CONSTANT Days \leftarrow ``` | 15 |

| Question | Answer |
| :---: | :---: |
| 10 | ```MaxWeek \leftarrow -1000// initialise max and min temperatures and total for the week MinWeek \leftarrow 1000 WeekTotal \leftarrow0 FOR DayCounter \leftarrow 0 TO Days - 1 MaxDay \leftarrow -1000// initialise max and min temperatures and total for each day MinDay \leftarrow }100 DayTotal \leftarrow 0 FOR HourCounter \leftarrow O TO Hours - 1 DayTotal \leftarrow DayTotal + Temperatures(HourCounter, DayCounter) // update total maximum and minimum IF Temperatures(HourCounter, DayCounter) > MaxDay THEN MaxDay \leftarrow Temperatures(HourCounter, DayCounter) ENDIF IF Temperatures(HourCounter, DayCounter) < MinDay THEN MinDay \leftarrow Temperatures(HourCounter, DayCounter) ENDIF \\ NEXT HourCounter \\ CASE OF DayCounter // select message for day \\ 0 : Day \(\leftarrow\) "Monday" \\ 1 : Day \(\leftarrow\) "Tuesday" \\ 2 : Day \(\leftarrow\) "Wednesday" \\ 3 : Day \(\leftarrow\) "Thursday" \\ 4 : Day \(\leftarrow\) "Friday" \\ 5 : Day \(\leftarrow\) "Saturday" \\ 6 : Day \(\leftarrow\) "Sunday"``` <br> ENDCASE <br> DayAverage $\leftarrow$ DayTotal / Hours // output results for day <br> OUTPUT Day // Results from a day <br> OUTPUT "Maximum temperature ", MaxDay <br> OUTPUT "Minimum temperature ", MinDay <br> OUTPUT "Average temperature ", ROUND (DayAverage, 2) |

Marks
IF MaxDay > MaxWeek // update total maximum and minimum THEN
MaxWeek $\leftarrow$ MaxDay
ENDIF
IF MinDay > MinWeek
THEN
MinWeek $\leftarrow$ MinDay
ENDIF
WeekTotal $\leftarrow$ WeekTotal + DayTotal // update total for week
NEXT DayCounter
WeekAverage $\leftarrow$ WeekTotal / Days
OUTPUT "Maximum temperature for week ", MaxWeek// output results for week
OUTPUT "Minimum temperature for week ", MinWeek
OUTPUT "Average temperature for Week ", ROUND (WeekAverage, 2)

## Marking Instructions in italics

AO2: Apply knowledge and understanding of the principles and concepts of computer science to a given context, including the analysis and design of computational or programming problems

| $\mathbf{0}$ | $\mathbf{1 - 3}$ | $\mathbf{4 - 6}$ | $7-9$ |
| :--- | :--- | :--- | :--- |
| No creditable <br> response. | At least one programming <br> technique has been used. <br> Any use of selection, iteration, <br> counting, totalling, input and <br> output. | Some programming techniques used <br> are appropriate to the problem. <br> More than one technique seen <br> applied to the scenario, check the list <br> of techniques needed. | The range of programming techniques <br> used is appropriate to the problem. <br> All criteria stated for the scenario have <br> been covered by the use of <br> appropriate programming techniques, <br> check list of techniques needed. |
|  | Some data has been stored but <br> not appropriately. <br> Any use of variables or arrays or <br> other language dependent data <br> structures e.g. Python lists. | Some of the data structures chosen <br> are appropriate and store some of the <br> data required. <br> More than one data structure used to <br> store data required by the scenario. | The data structures chosen are <br> appropriate and store all the data <br> required. <br> The data structures used store all the <br> data required by the scenario. |
