CHEMISTRY 5070/32

Paper 3 Practical Test

October/November 2014

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials: As listed in the Confidential Instructions

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

Qualitative Analysis Notes are printed on page 8.

You should show the essential steps in any calculations and record experimental results in the spaces provided on the Question Paper.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 6 printed pages and 2 blank pages.

1 The active ingredient in bleaching powder is calcium hypochlorite, Ca(ClO)₂. When bleaching powder is added to an acidified, aqueous solution of iodide ions, iodine is produced.

$$\mathrm{Ca(C}\mathit{l}\mathrm{O})_{2} \ + \ 4\mathrm{I}^{-} \ + \ 4\mathrm{H}^{+} \ \longrightarrow \ \mathrm{CaC}\mathit{l}_{2} \ + \ 2\mathrm{H}_{2}\mathrm{O} \ + \ 2\mathrm{I}_{2}$$

The amount of iodine produced by the above reaction can be determined by titration with sodium thiosulfate, $Na_2S_2O_3$, using starch as an indicator.

$$2\mathrm{Na}_2\mathrm{S}_2\mathrm{O}_3 \ + \ \mathrm{I}_2 \ \longrightarrow \ \mathrm{Na}_2\mathrm{S}_4\mathrm{O}_6 \ + \ 2\mathrm{NaI}$$

P is an aqueous solution of iodine produced by reacting bleaching powder with an excess of acidified, aqueous iodide ions.

Q is 0.100 mol/dm³ sodium thiosulfate.

(a) Put Q into the burette.

Pipette a 25.0 cm³ (or 20.0 cm³) portion of **P** into a flask.

Add ${\bf Q}$ from the burette until the red-brown colour fades to pale yellow, **then** add a few drops of the starch indicator. This will give a dark blue solution. Continue adding ${\bf Q}$ slowly from the burette until one drop of ${\bf Q}$ causes the blue colour to disappear, leaving a colourless solution. Record your results in the table, repeating the titration as many times as you consider necessary to achieve consistent results.

Results

Burette readings

| titration number | 1 | 2 | |

Summary

Tick (\checkmark) the best titration results.

[Total: 17]

| | 3 |
|-----|---|
| (b) | Q is 0.100 mol/dm ³ sodium thiosulfate. |
| | Using your results from (a) , calculate the concentration, in mol/dm ³ , of iodine in P . |
| | $2Na_2S_2O_3 + I_2 \rightarrow Na_2S_4O_6 + 2NaI$ |
| | |
| | |
| | |
| | |
| | |
| | concentration of iodine in P mol/dm³ [2] |
| (c) | Using your answer from (b) , deduce the number of moles of calcium hypochlorite required to produce the iodine in $1\mathrm{dm}^3$ of P . |
| | $\mathrm{Ca(C}\mathit{lO})_2 \ + \ 4\mathrm{I^-} \ + \ 4\mathrm{H^+} \ \longrightarrow \ \mathrm{CaC}\mathit{l}_2 \ + \ 2\mathrm{H}_2\mathrm{O} \ + \ 2\mathrm{I}_2$ |
| | |
| | |
| | |
| | moles of calcium hypochlorite[1] |
| (d) | Given that the number of moles of calcium hypochlorite in your answer from (c) were present in 10.0 g of the bleaching powder, calculate the percentage by mass of calcium hypochlorite in |
| | the bleaching powder. [The relative formula mass of $Ca(ClO)_2$ is 143.] |
| | |

You are provided with solutions **R** and **S**.

Carry out the following tests and record your observations in the table. You should test and name any gas evolved.

| test no. | test | observations |
|-------------|--|--------------|
| 1 | Gently warm 2 cm depth of R in a test-tube. | |
| 2 | (a) To 1 cm depth of aqueous sodium chloride in a test-tube, add a few drops of aqueous silver nitrate.(b) To the mixture from (a), add R until no further change occurs. | |
| 3 | To 1 cm depth of aqueous copper(II) sulfate in a test-tube, add R until no further change occurs. | |
| 4 | To 1 cm depth of S in a test-tube, add R until no further change occurs. Keep this mixture for use in Test 5. | |
| 5 | To 1 cm depth of aqueous hydrogen peroxide in a boiling tube, add the mixture from Test 4. | |

| test no. | | test | observations |
|-------------|-----|---|--------------|
| 6 | (a) | To 1 cm depth of S in a test-tube, add an equal volume of aqueous silver nitrate. Leave to settle. | |
| | (b) | To the mixture from (a) , add dilute nitric acid. | |
| 7 | (a) | To 1 cm depth of S in a test-tube, add an equal volume of aqueous sodium thiosulfate and mix well. | |
| | (b) | To the mixture from (a) , add R until no further change occurs. | |

[19]

Conclusions

| Name the compound present in R | |
|---|-----|
| Give the formula of a cation and an anion in S . | |
| A cation in S is and an anion in S is | |
| In test 7, S is acting as | [4] |

QUALITATIVE ANALYSIS NOTES

Tests for anions

| anion | test | test result |
|---|--|--|
| carbonate (CO ₃ ²⁻) | add dilute acid | effervescence, carbon dioxide produced |
| chloride (C <i>l</i> ⁻) [in solution] | acidify with dilute nitric acid, then add aqueous silver nitrate | white ppt. |
| iodide (I ⁻) [in solution] | acidify with dilute nitric acid, then add aqueous silver nitrate | yellow ppt. |
| nitrate (NO ₃ ⁻) [in solution] | add aqueous sodium hydroxide then add aluminium foil; warm carefully | ammonia produced |
| sulfate (SO ₄ ²⁻) [in solution] | acidify with dilute nitric acid, then add aqueous barium nitrate | white ppt. |

Tests for aqueous cations

| cation | effect of aqueous sodium hydroxide | effect of aqueous ammonia |
|--|--|--|
| aluminium (Al ³⁺) | white ppt., soluble in excess giving a colourless solution | white ppt., insoluble in excess |
| ammonium (NH ₄ ⁺) | ammonia produced on warming | _ |
| calcium (Ca ²⁺) | white ppt., insoluble in excess | no ppt., or very slight white ppt. |
| copper(II) (Cu ²⁺) | light blue ppt., insoluble in excess | light blue ppt., soluble in excess giving a dark blue solution |
| iron(II) (Fe ²⁺) | green ppt., insoluble in excess | green ppt., insoluble in excess |
| iron(III) (Fe ³⁺) | red-brown ppt., insoluble in excess | red-brown ppt., insoluble in excess |
| zinc (Zn ²⁺) | white ppt., soluble in excess giving a colourless solution | white ppt., soluble in excess giving a colourless solution |

Tests for gases

| gas | test and test result |
|-----------------------------------|----------------------------------|
| ammonia (NH ₃) | turns damp red litmus paper blue |
| carbon dioxide (CO ₂) | turns limewater milky |
| chlorine (Cl ₂) | bleaches damp litmus paper |
| hydrogen (H ₂) | 'pops' with a lighted splint |
| oxygen (O ₂) | relights a glowing splint |
