### **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.edexcel.com</a> or <a href="https://www.edexcel.com">www.edexcel.com</a>/contactus.

### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. #### **General Marking Guidance**

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### PEARSON EDEXCEL GCE MATHEMATICS

#### **General Instructions for Marking**

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.

#### 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol  $\sqrt{\phantom{a}}$  will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- oe or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- \* The answer is printed on the paper or ag- answer given
- or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.
- 6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

### **General Principles for Core Mathematics Marking**

(But note that specific mark schemes may sometimes override these general principles).

### Method mark for solving 3 term quadratic:

#### 1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where  $|pq| = |c|$ , leading to  $x = ...$ 

$$(ax^2 + bx + c) = (mx + p)(nx + q)$$
, where  $|pq| = |c|$  and  $|mn| = |a|$ , leading to  $x = ...$ 

#### 2. Formula

Attempt to use the correct formula (with values for a, b and c).

### 3. Completing the square

Solving 
$$x^2 + bx + c = 0$$
:  $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$ ,  $q \neq 0$ , leading to  $x = \dots$ 

### Method marks for differentiation and integration:

#### 1. Differentiation

Power of at least one term decreased by 1.  $(x^n \rightarrow x^{n-1})$ 

### 2. Integration

Power of at least one term increased by 1.  $(x^n \rightarrow x^{n+1})$ 

#### **Use of a formula**

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

<u>Method mark</u> for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is <u>not</u> quoted, the method mark can be gained by implication from <u>correct</u> working with values, but may be lost if there is any mistake in the working.

#### **Exact answers**

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

2.	$y = \sqrt{x} + \frac{4}{\sqrt{x}} + 4$	$y = \sqrt{x} + \frac{4}{\sqrt{x}} + 4 = x^{\frac{1}{2}} + 4x^{-\frac{1}{2}} + 4$		
	$x^n \to x^{n-1}$	Decreases any power by 1. Either $x^{\frac{1}{2}} \rightarrow x^{-\frac{1}{2}}$ or $x^{-\frac{1}{2}} \rightarrow x^{-\frac{3}{2}}$	M1	
	$\left(\frac{dy}{dx} = \right) \frac{1}{2} x^{-\frac{1}{2}} + 4 \times -\frac{1}{2} x^{-\frac{3}{2}}$ $\left( = \frac{1}{2} x^{-\frac{1}{2}} - 2x^{-\frac{3}{2}} \right)$	Correct derivative, simplified or unsimplified including indices. E.g. allow $\frac{1}{2}-1$ for $-\frac{1}{2}$ and allow $-\frac{1}{2}-1$ for $-\frac{3}{2}$	A1	
	$x = 8 \Rightarrow \frac{dy}{dx} = \frac{1}{2}8^{-\frac{1}{2}} + 4 \times -\frac{1}{2}8^{-\frac{3}{2}}$	Attempts to substitute $x = 8$ into their 'changed' (even integrated) expression that is clearly not $y$ . If they attempt algebraic manipulation of their $dy/dx$ before substitution, this mark is still available.	M1	
	$= \frac{1}{2\sqrt{8}} - \frac{2}{\left(\sqrt{8}\right)^3} = \frac{1}{2\sqrt{8}} - \frac{2}{8\sqrt{8}} = \frac{1}{8\sqrt{2}} = \frac{1}{16}\sqrt{2}$	B1: $\sqrt{8} = 2\sqrt{2}$ seen or implied anywhere, including from substituting $x = 8$ into $y$ . May be seen explicitly or implied from e.g. $8^{\frac{3}{2}} = 16\sqrt{2}$ or $8^{\frac{5}{2}} = 128\sqrt{2}$ or $4\sqrt{8} = 8\sqrt{2}$ A1: $\cos \frac{1}{16}\sqrt{2}$ or $\frac{\sqrt{2}}{16}$ and allow rational equivalents for $\frac{1}{16}$ e.g. $\frac{32}{512}$ Apply isw so award this mark as soon as a correct answer is seen. 		(b) for using an AP (or GP) sum as do form an AP (or GP).	
(b)	2	Writes 1 + their $a_2$ + their $a_3$ = 10. E.g. $1+2k+\frac{2k^2+k}{2k}$ = 10. Must be a correct follow through equation in terms of $k$ only.	M1
	$\Rightarrow 2+4k+2k+1=20 \Rightarrow k=$ or e.g. $\Rightarrow 6k^2 -17k = 0 \Rightarrow k =$	Solves their equation in $k$ which has come from the sum of 3 terms = 10, and reaches $k =$ Condone poor algebra but if a quadratic is obtained then the usual rules apply for solving – see General Principles. (Note that it does not need to be a 3-term quadratic in this case)	M1
	$\left(k=\right)\frac{17}{6}$	$k = \frac{17}{6}$ or exact equivalent e.g. $2\frac{5}{6}$ Do <b>not</b> allow $k = \frac{8.5}{3}$ or $k = \frac{17/2}{3}$ Ignore any reference to $k = 0$ .  Allow 2.83 recurring as long as the recurring is clearly indicated e.g. a dot over the 3.	A1

	B1: Straight line with an intercept at $(0, c)$ or just $c$ marked on the positive $y$ -axis provided the line passes through the positive $y$ -axis.  Allow $(c, 0)$ as long as it is marked in the correct place. Allow $(0, c)$ in the body of the script but in any ambiguity, the sketch has precedence. <b>Ignore any intercepts</b> with the $x$ -axis.	B1
(a)(ii)	Either: For the shape of a $y = \frac{1}{x}$ curve in any position. It must have two branches and be asymptotic horizontally and vertically with no obvious "overlap" with the asymptotes, but otherwise be generous. The curve may bend away from the asymptote a little at the end. Sufficient curve must be seen to suggest the asymptotic behaviour, both vertically and horizontally and the branches must approach the same asymptote  Or the equation $y = 5$ seen independently i.e. whether the sketch has an asymptote here or not. Do not allow $y \neq 5$ or $x = 5$ .	B1
	B1: Fully correct graph <b>and</b> with a horizontal asymptote on the positive $y$ -axis. The asymptote does not have to be drawn but the <b>equation</b> $y = 5$ must be seen. The shape needs to be reasonably accurate with the "ends" not bending away significantly from the asymptotes and the branches must approach the same asymptote. Ignore $x = 0$ given as an asymptote.
