# Mark Scheme (FINAL)

Summer 2017

Pearson Edexcel GCE  
In Core Mathematics 4 (6666/01)

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. ## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

**PEARSON EDEXCEL GCE MATHEMATICS****General Instructions for Marking**

1. The total number of marks for the paper is 75
2. The Edexcel Mathematics mark schemes use the following types of marks:
  - **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
  - **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
  - **B** marks are unconditional accuracy marks (independent of M marks)
  - Marks should not be subdivided.

## 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
  - ft – follow through
  - the symbol  $\surd$  will be used for correct ft
  - cao – correct answer only
  - cso - correct solution only. There must be no errors in this part of the question to obtain this mark
  - isw – ignore subsequent working
  - awrt – answers which round to
  - SC: special case
  - oe – or equivalent (and appropriate)
  - d... or dep – dependent
  - indep – independent
  - dp decimal places
  - sf significant figures
  - \* The answer is printed on the paper or ag- answer given
  - $\square$  or d... The second mark is dependent on gaining the first mark
4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft.
  5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

6. If a candidate makes more than one attempt at any question:
  - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.
  - If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
  
7. Ignore wrong working or incorrect statements following a correct answer.

**Method mark for solving 3 term quadratic:**

**1. Factorisation**

$$(x^2 + bx + c) = (x + p)(x + q), \text{ where } |pq| = |c|, \text{ leading to } x = \dots$$

$$(ax^2 + bx + c) = (mx + p)(nx + q), \text{ where } |pq| = |c| \text{ and } |mn| = |a|, \text{ leading to } x = \dots$$

**2. Formula**

Attempt to use the correct formula (with values for  $a$ ,  $b$  and  $c$ ).

**3. Completing the square**

$$\text{Solving } x^2 + bx + c = 0: \left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0, \quad q \neq 0, \text{ leading to } x = \dots$$

**Method marks for differentiation and integration:**

**1. Differentiation**

Power of at least one term decreased by 1. ( $x^n \rightarrow x^{n-1}$ )

**2. Integration**

Power of at least one term increased by 1. ( $x^n \rightarrow x^{n+1}$ )

**Use of a formula**

Where a method involves using a formula that has been learnt, the advice given in recent examiners' reports is that the formula should be quoted first.

Normal marking procedure is as follows:

Method mark for quoting a correct formula and attempting to use it, even if there are small errors in the substitution of values.

Where the formula is not quoted, the method mark can be gained by implication from correct working with values, but may be lost if there is any mistake in the working.

**Exact answers**

Examiners' reports have emphasised that where, for example, an exact answer is asked for, or working with surds is clearly required, marks will normally be lost if the candidate resorts to using rounded decimals.

1.	$x = 3t - 4, y = 5 - \frac{6}{t}, t > 0$		
(a)	$\frac{dx}{dt} = 3, \frac{dy}{dt} = 6t^{-2}$		
	$\frac{dy}{dx} = \frac{6t^{-2}}{3} \left\{ = \frac{6}{3t^2} = 2t^{-2} = \frac{2}{t^2} \right\}$	their $\frac{dy}{dt}$ divided by their $\frac{dx}{dt}$ to give $\frac{dy}{dx}$ in terms of $t$ or their $\frac{dy}{dt}$ multiplied by their $\frac{dt}{dx}$ to give $\frac{dy}{dx}$ in terms of $t$	M1
		$\frac{6t^{-2}}{3}$ , simplified or un-simplified, in terms of $t$ . <b>See note.</b>	A1 isw
	Award <b>Special Case 1<sup>st</sup> M1</b> if both $\frac{dx}{dt}$ and $\frac{dy}{dt}$ are stated <b>correctly</b> and <b>explicitly</b> .		[2]
<b>Note:</b> You can recover the work for part (a) in part (b).			
(a) <b>Way 2</b>	$y = 5 - \frac{18}{x+4} \Rightarrow \frac{dy}{dx} = \frac{18}{(x+4)^2} = \frac{18}{(3t)^2}$	Writes $\frac{dy}{dx}$ in the form $\frac{\pm \lambda}{(x+4)^2}$ , <b>and</b> writes $\frac{dy}{dx}$ as a function of $t$ .	M1
		Correct un-simplified or simplified answer, in terms of $t$ . <b>See note.</b>	A1 isw

### Question 1 Notes

<b>1. (a)</b>	<b>Note</b>	Condone $\frac{dy}{dx} = \frac{\left(\frac{6}{t^2}\right)}{3}$ for A1
	<b>Note</b>	You can ignore subsequent working following on from a correct expression for $\frac{dy}{dx}$ in terms of $t$ .
<b>(b)</b>	<b>Note</b>	Using a changed gradient (i.e. applying $\frac{-1}{\text{their } \frac{dy}{dx}}$ or $\frac{1}{\text{their } \frac{dy}{dx}}$ or $-(\text{their } \frac{dy}{dx})$ ) is M0.
	<b>Note</b>	<b>Final A1:</b> A correct solution is required from a correct $\frac{dy}{dx}$ .
	<b>Note</b>	<b>Final A1:</b> You can ignore subsequent working following on from a correct solution.
<b>(c)</b>	<b>Note</b>	<b>1<sup>st</sup> M1:</b> A full attempt to eliminate $t$ is defined as either <ul style="list-style-type: none"> <li>rearranging one of the parametric equations to make <math>t</math> the subject and substituting for <math>t</math> in the other parametric equation (only the RHS of the equation required for M mark)</li> <li>rearranging both parametric equations to make <math>t</math> the subject and putting the results equal to each other.</li> </ul>
	<b>Note</b>	Award M1A1 for $\frac{6}{5 - y} = \frac{x + 4}{3}$ or equivalent.

**Question 2 Notes**

NOTE	IN THIS QUESTION IGNORE LABELLING AND MARK ALL PARTS TOGETHER.		
<b>Note</b>	$(2+kx)^{-3} = \frac{1}{8} \left( 1 - \frac{3}{2}kx + \frac{3}{2}k^2x^2 + \dots \right) = \frac{1}{8} - \frac{3}{16}kx + \frac{3}{16}k^2x^2 + \dots$		
<b>Note</b>	Writing down $\left\{ \left( 1 + \frac{kx}{2} \right)^{-3} \right\} = 1 + (-3) \left( \frac{kx}{2} \right) + \frac{(-3)(-3-1)}{2!} \left( \frac{kx}{2} \right)^2 + \dots$ gets (b) 1 <sup>st</sup> M1		
<b>Note</b>	Writing down $\left\{ (2+kx)^{-3} \right\} = \frac{1}{8} \left( 1 + (-3) \left( \frac{kx}{2} \right) + \frac{(-3)(-3-1)}{2!} \left( \frac{kx}{2} \right)^2 + \dots \right)$ gets (b) 1 <sup>st</sup> M1 2 <sup>nd</sup> M1 and (c) M1		
<b>Note</b>	Writing down $\left\{ (2+kx)^{-3} \right\} = 2^{-3} + (-3)(2^{-4})(kx) + \frac{(-3)(-4)}{2} (2^{-5})(kx)^2$ gets (b) 1 <sup>st</sup> M1 2 <sup>nd</sup> M1 and (c) M1		
<b>Note</b>	Writing down $\left\{ (2+kx)^{-3} \right\} = (\text{their A}) \left( 1 + (-3) \left( \frac{kx}{2} \right) + \frac{(-3)(-3-1)}{2!} \left( \frac{kx}{2} \right)^2 + \dots \right)$ where (their A) $\neq 1$ , gets (b) 1 <sup>st</sup> M1 2 <sup>nd</sup> M1 and (c) M1		

2. (b), (c)	<b>Note</b>	(their $A$ ) is defined as either <ul style="list-style-type: none"> <li>• their answer to part (a)</li> <li>• their stated <math>A = \dots</math></li> <li>• their "<math>2^{-3}</math>" in their stated <math>2^{-3}\left(1 + \frac{kx}{2}\right)^{-3}</math></li> </ul>
	<b>Note</b>	Give 2 <sup>nd</sup> M0 in part (b) if (their $A$ ) = 1
	<b>Note</b>	Give M0 in part (c) if (their $A$ ) = 1
2. (c)	<b>Note</b>	Allow M1 for (their $A$ )(-3) $\left(\frac{\text{their } k \text{ from (b)}}{2}\right)$
	<b>Note</b>	Award A0 for $B = -\frac{27}{16}x$
	<b>Note</b>	Allow A1 for $B = -\frac{27}{16}x$ followed by $B = -\frac{27}{16}$ <b>or</b> $-1\frac{11}{16}$ <b>or</b> $-1.6875$
	<b>Note</b>	$k = -9$ leading to $B = \frac{27}{16}$ <b>or</b> $1\frac{11}{16}$ <b>or</b> $1.6875$ is A0
	<b>Note</b>	Give A0 for finding both $B = -\frac{27}{16}$ and $B = \frac{27}{16}$ (without rejecting $B = \frac{27}{16}$ ) as their final answer.
	<b>Note</b>	The A1 mark in part (c) is for a correct solution only.
	<b>Note</b>	<b>Be careful!</b> It is possible to award M0A0 in part (c) for a solution leading to $B = -\frac{27}{16}$ . E.g. $f(x) = (2 + kx)^{-3} = 2^{-3}(1 + kx)^{-3} = \frac{1}{8}\left(1 + (-3)(kx) + \frac{(-3)(-4)}{2!}(kx)^2 + \dots\right) = \frac{1}{8} - \frac{3k}{8}x + \frac{3k^2}{4}x^2 + \dots$ leading to (a) $A = \frac{1}{8}$ , (b) $k = \frac{9}{2}$ , (c) $B = -\frac{27}{16}$ , gets (a) B1, (b) M1M0A0 (c) M0A0
2. (b), (c)	<b>Note</b>	${}^{-3}C_0(2)^{-3} + {}^{-3}C_1(2)^{-4}(kx) + {}^{-3}C_2(2)^{-5}(kx)^2$ with the C terms not evaluated gets (b) 1 <sup>st</sup> M0 2 <sup>nd</sup> M0 and (c) M0

8. (c)	<b>Way 2 for the first 5 marks:</b> Applying integration by parts on $\int (q + \tan q) \sec^2 q \, dq$		
Way 2	$\int (q \sec^2 q + \tan q \sec^2 q) \, dq = \int (q + \tan q) \sec^2 q \, dq, \quad \left\{ \begin{array}{l} u = q + \tan q \Rightarrow \frac{du}{dq} = 1 + \sec^2 q \\ \frac{dv}{dq} = \sec^2 q \Rightarrow v = \tan q = g(q) \end{array} \right.$		
h(q) and g(q) are trigonometric functions in q and g(q) = their $\int \sec^2 q \, dq$ . [Note: g(q) $\neq$ $\sec^2 q$ ]

<b>Question 8 Notes</b>			
8. (a)	<b>Note</b>	Allow M1 for an answer of $k = \arctan 2.72$ without reference to $\frac{\sqrt{3}\rho}{2}$ or $\frac{3\rho}{2\sqrt{3}}$	
	<b>Note</b>	Allow M1 for an answer of $k = 3 \left( \arccos\left(\frac{1}{2}\right) \right) \sin\left(\arccos\left(\frac{1}{2}\right)\right)$ without reference to $\frac{\sqrt{3}\rho}{2}$ or $\frac{3\rho}{2\sqrt{3}}$	
	<b>Note</b>	E.g. allow M1 for $q = 60^\circ$ , leading to $k = 3(60)\sin(60)$ or $k = 90\sqrt{3}$	

Question 8 Notes Continued

8. (b)	<b>Note</b>	To gain A1, $dq$ does not need to appear until they obtain $3\int(q\sec^2 q + \tan q \sec^2 q) dq$	
	<b>Note</b>	For M1, their $\frac{dx}{dq}$ , where their $\frac{dx}{dq} = 3q \sin q$ , needs to be a trigonometric function in $q$	
	<b>Note</b>	Writing $\int(\sec^3 q)(3\sin q + 3q \cos q) = 3\int(q\sec^2 q + \tan q \sec^2 q) dq$ is sufficient for B1M1A1	
	<b>Note</b>	Writing $\frac{dx}{d\theta} = 3\sin \theta + 3\theta \cos \theta$ followed by writing $\int y \frac{dx}{dq} dq = 3\int(q\sec^2 q + \tan q \sec^2 q) dq$ is sufficient for B1M1A1	
	<b>Note</b>	The final A mark would be lost for $\int \frac{1}{\cos^3 q} 3\sin q + 3q \cos q = 3\int(q\sec^2 q + \tan q \sec^2 q) dq$ [lack of brackets in this particular case].	
	<b>Note</b>	Give 2 <sup>nd</sup> B0 for $a = 0$ and $b = 60^\circ$ , without reference to $b = \frac{\rho}{3}$	
(c)	<b>Note</b>	A decimal answer of 7.861956551... (without a correct <b>exact</b> answer) is A0.	
	<b>Note</b>	First three marks are for integrating $\theta \sec^2 \theta$ with respect to $\theta$	
	<b>Note</b>	Fourth and fifth marks are for integrating $\tan \theta \sec^2 \theta$ with respect to $\theta$	
	<b>Note</b>	Candidates are not penalised for writing $\ln \sec q $ as either $\ln(\sec q)$ or $\ln \sec q$	
	<b>Note</b>	$q \sec^2 q \rightarrow q \tan q + \ln(\sec q)$ <b>WITH NO INTERMEDIATE WORKING</b> is M0M0A0	
	<b>Note</b>	$q \sec^2 q \rightarrow q \tan q - \ln(\cos q)$ <b>WITH NO INTERMEDIATE WORKING</b> is M0M0A0	
	<b>Note</b>	$q \sec^2 q \rightarrow q \tan q - \ln(\sec q)$ <b>WITH NO INTERMEDIATE WORKING</b> is M1M1A1	
	<b>Note</b>	$q \sec^2 q \rightarrow q \tan q + \ln(\cos q)$ <b>WITH NO INTERMEDIATE WORKING</b> is M1M1A1	
	<b>Note</b>	Writing a correct $uv - \int v \frac{du}{dx}$ with $u = q$ , $\frac{dv}{dq} = \tan q$ , $\frac{du}{dq} = 1$ and $v =$ their $g(q)$ and making one error in the direct application of this formula is 1 <sup>st</sup> M1 only.	
8. (c)	Alternative method for finding $\int \tan q \sec^2 q dq$		
	$\left\{ \begin{array}{l} u = \tan q \quad \Rightarrow \frac{du}{dq} = \sec^2 q \\ \frac{dv}{dq} = \sec^2 q \quad \Rightarrow v = \tan q \end{array} \right\}$		
	$\int \tan q \sec^2 q dq = \tan^2 q - \int \tan q \sec^2 q dq$ $\Rightarrow 2 \int \tan q \sec^2 q dq = \tan^2 q$		
	$\int \tan q \sec^2 q dq = \frac{1}{2} \tan^2 q$	$\tan \theta \sec^2 \theta$ or $\rightarrow \pm C \tan^2 q$	M1
		$\tan q \sec^2 q \rightarrow \frac{1}{2} \tan^2 q$	A1
	<b>or</b> $\left\{ \begin{array}{l} u = \sec q \quad \Rightarrow \frac{du}{dq} = \sec q \tan q \\ \frac{dv}{dq} = \sec q \tan q \quad \Rightarrow v = \sec q \end{array} \right\}$		
	$\int \tan q \sec^2 q dq = \sec^2 q - \int \sec^2 q \tan q dq$ $\Rightarrow 2 \int \tan q \sec^2 q dq = \sec^2 q$		
	$\int \tan q \sec^2 q dq = \frac{1}{2} \sec^2 q$	$\tan \theta \sec^2 \theta$ or $\rightarrow \pm C \sec^2 q$	M1
