Paper 2 Data Response MARK SCHEME Maximum Mark: 60 9609/22 February/March 2022

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the February/March 2022 series for most Cambridge IGCSE[™], Cambridge International A and AS Level components and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Social Science-Specific Marking Principles (for point-based marking)

r							
1	•	mponents using point-based marking: Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.					
	From this it follows that we:						
	а	DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)					
	b	DO credit alternative answers/examples which are not written in the mark scheme if they are correct					
	С	DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require <i>n</i> reasons (e.g. State two reasons).					
	d	DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)					
	е	DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities					
	f	DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).					
	g	DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)					
2	Pre	esentation of mark scheme:					
	•	Slashes (/) or the word 'or' separate alternative ways of making the same point. Semi colons (;) bullet points (•) or figures in brackets (1) separate different points. Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).					
3	Ca	culation questions:					
	•	The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer					
	•	If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.					
	•	Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.					
	•	Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.					

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

	0	N	lo creditat	ble content				
	Knowledge To sel To inc Increa Brand To diff	vledge and understand e of benefits may include I more rease the price se customer loyalty / rep recognition rerentiate from competition e a focus for the marketi	e: Deat purch	ases				

AO2 Application

- RR is a sole trader / small business and is likely to have limited resources
- RR makes unique vases and glassware products
- RR's mission statement 'to make waste beautiful'.
- Markets products as 'lovely for the planet, lovely for you'.
- RR has a strong <u>local</u> brand image.
- RR's USP is recycling waste (assumption can be made that no other competitors do this).
- RR employs two local artists, who are environmentally aware.
- Employees are skilled.
- RR uses job production.
- Table 1.1.
- Demand has grown and Rehana needs to increase output.
- Rehana wants to increase output by either employing more artists or changing to batch production.

Question	Answer	Marks
1(c)	 AO3 Analysis Increase customer loyalty / repeat purchases: gives RR an established customer base and revenue stream – more likely to make Rehana's growth strategies successful. Brand recognition: means that customers who are looking for recycled products are more likely to purchase RR's vases – increasing Rehana's incomes/profit. To differentiate from competition: likely to be a competitive market and RR may need customers to recognise their recycled products so that sales increase – so that Rehana can reinvest more profit and grow the business. To give a focus for the marketing mix: the 'lovely for the planet, lovely for you' marketing slogan shows a double benefit to making a purchase, meaning that Rehana may be able to charge a higher price – increasing her income/profit.

Demand has grown and Rehana needs to increase output Rehana wants to increase output by either employing mor changing to batch production. 	at no oth are.	er	;

Question	Answer	Marks
1(d)	AO3 Analysis	
	For batch:	
	 will meet the increase in demand boosting revenue 	
	The only way to cost effectively increase her output	
	Costs of recruiting skilled artists may be too expensive	
	Against batch:	
	 Amount of raw materials (waste bottles) available may not be sufficient for expansion 	
	 Impact on recent marketing focusing on USP may be negative 	
	 Batch production/machinery skills of two local artists/herself may not be sufficient leading to waste 	
	• Amount of liquidity available for investment (0.25:1 acid test ratio) may be too low for investment	
	For job:	
	Maintain USP of RR	
	 Utilise skilled workers who are already employed by RR 	
	Against job:	
	High cost of skilled workers	
	 High unit cost for production of handmade products 	
	May not be able to meet demand	
	AO4 Evaluation	
	 A recommendation about a whether RR should introduce batch production (or not). 	
	• A judgement over the relative suitability of production methods.	
	Elements that the recommendation/judgement could depend upon.	
	 Weighing up of the impacts on RR of the change. 	
	• Weighing up of the likely advantages/disadvantages of batch production.	
	Accept any reasonable answer
