Paper 2 Data Response

October/November 2021

MARK SCHEME

Maximum Mark: 60

<p>Published</p>

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2021 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

This document consists of **24** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Social Science-Specific Marking Principles (for point-based marking)

1 Components using point-based marking:

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Calculation questions:

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

	No creditable content						

Question	Answer	Marks
1(d)	<p>Indicative content</p> <p>AO1 Knowledge and understanding</p> <p>Knowledge of methods to improve morale including:</p> <ul style="list-style-type: none"> financial – higher payments/bonus/change payment method/award shares in company non-financial – team working, increase holidays, employee participation encouraged, management style (democratic/laissez-faire as highly skilled), job rotation, promotion opportunities/training <p>AO2 Application</p> <p>Application of morale to QF's production workers, may include:</p> <ul style="list-style-type: none"> low morale of employees leading to a fall in quality and a rise in customer complaints skilled/highly trained labour leaving leading to high recruitment costs profits doubled but employees seen no benefit PLC so employee share ownership could work highly trained and highly skilled, so more training unlikely to work increase in competitors willing to attract highly skilled employees from QF <p>AO3 Analysis</p> <p>Analysis of methods may include:</p> <ul style="list-style-type: none"> financial morale boosters, e.g. pay increases; employees have not received a pay increase in three years although profits at QF have doubled non-financial morale boosters, e.g. increase in holidays – employees' suggestion, promotion opportunities, job redesign, ask employees' advice on reducing stocks/efficiencies, etc. <p>AO4 Evaluation</p> <ul style="list-style-type: none"> A recommendation about how QF's management could improve the morale of its production employees. A judgement over the relative suitability of the chosen method(s). Elements that the recommendation could depend upon, including costs v benefits, employee views, e.g. already highly skilled so more training unlikely to improve morale, competitors' pay and conditions should be considered. Weighing up of the impacts on QF/employees – employees complaining about pay and bonuses so increasing these more likely to improve morale. Ownership of shares gives a greater stake in the company, so QF's objectives (e.g. growth, profits, quality) become the employees' objectives/employees likely to want to improve quality and reduce customer complaints/increase profits/ensure loyalty so less likely to move to a competitor firm. 	

Question	Answer					Marks
1(d)	Examples of how an answer could develop and how it should be annotated.					
	K	APP	AN	DEV	EVAL	
	Increase wages	can be one as profits have doubled over the last 3 years	increase in pay will make them work harder	productivity will increase and quality may improve sales	increase (wages) is the best way to increase morale (eval) as the employees do not think their pay is fair (eval – justifying recommendation), this has affected the quality of the furniture. Increased quality can increase sales and revenue to offset the increase in wages (eval – balancing costs against revenue)	
	Introduce piece rates	suitable for furniture manufacturing as division of labour can be used	this will lead to more units being produced	and lead to increased profits but quality may go down as employees rush to produce a higher quantity		
ARA

Question	Answer	Marks
2(e)	<p>Indicative content</p> <p>AO1 Knowledge and understanding</p> <p>Knowledge of the aims of stakeholders, including:</p> <ul style="list-style-type: none"> • local community – nice place to live/work, clean environment • managers – high pay, status, perks • employees – high pay, holidays, security • suppliers – security, sales, profit • customers – low prices, quality product, good service • owners – profit, dividends • government – welfare, tax revenue, economic growth, low unemployment <p>Note: Aims may be implied rather than explicitly state that it is an aim.</p> <p>AO2 Application</p> <p>Application of stakeholder aims to TM:</p> <ul style="list-style-type: none"> • local community, e.g. environmental impact, pollution of water supplies, employment/unemployment, living standards • employees/recruits, e.g. training, skilled work, higher incomes • manufacturers of electric vehicles / batteries / mining equipment, etc. <p>Note: Take reference to TM if using as a proxy for owners.</p> <p>AO3 Analysis</p> <p>Analysis of conflicts between stakeholder aims may include:</p> <ul style="list-style-type: none"> • government and local community – higher employment/tax revenue so likely to give planning permission, whilst community concerned about pollution of water, buildings in local area or longer term impact when mine closes • employees and owners – employees want higher payments, job security, permanent contracts – all increase costs and conflict with owner's aims to maximise profits/keep costs low • suppliers and owners – both aim to maximise profits so owners want low priced supplies whilst suppliers would like higher prices <p>AO4 Evaluation</p> <ul style="list-style-type: none"> • A judgement may consider the importance of conflict, the potential impact of conflict, whether some stakeholders are more important than others and the need to prioritise stakeholders' interests and conflicts. • A judgement over the relative effects on TM of the stakeholder conflicts. • Elements that the judgement could depend upon, including how this may vary over time and in relation to different specific business decisions. 	

Question	Answer					Marks
2(e)	Examples of how an answer could develop and how it should be annotated.					
	K	APP	AN	DEV	EVAL	
	Shareholders want to obtain high profits (K), local community aims for a clean environment (K)	TM is a private limited company	they want to exploit as much as they can from the ground to obtain higher profits, but this conflicts with the local community's aim for a clean environment	exploitation of minerals from the ground will pollute the local water supplies, damaging the environment for future generations. But reducing the pollution will reduce the profits, so increasing the conflict between the two aims	The conflict of the aim for increasing output would highly conflict with the aim of the community (eval) since the mining of tin comes with negative externalities. This will also increase the conflict with the shareholders' aim of high profits (eval of two conflicts) as they may face fines or be required to clean up the pollution or face being shut down (justified judgement of two conflicts)
