Paper 2 Data Response

**October/November 2023**

MARK SCHEME

Maximum Mark: 60

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

---

This document consists of **38** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**PUBLISHED****Social Science-Specific Marking Principles  
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require  $n$  reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

**2 Presentation of mark scheme:**

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

**3 Calculation questions:**

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

**4 Annotation:**

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

**Guidance on using levels-based marking**

Marking of work should be positive, rewarding achievement where possible, but clearly differentiating across the whole range of marks, where appropriate.

The examiner should look at the work and then make a judgement about which level statement is the best fit. In practice, work does not always match one level statement precisely so a judgement may need to be made between two or more level statements.

Once a best-fit level statement has been identified, use the following guidance to decide on a specific mark:

- If the candidate's work **convincingly** meets the level statement, award the highest mark.
- If the candidate's work **adequately** meets the level statement, award the most appropriate mark in the middle of the range.
- If the candidate's work **just** meets the level statement, award the lowest mark.
- L1, L2 etc. must be clearly annotated on the response at the point where the level is achieved.

**Assessment objectives****AO1 Knowledge and understanding**

Demonstrate knowledge and understanding of business concepts, terms and theories.

**AO2 Application**

Apply knowledge and understanding of business concepts, terms and theories to problems and issues in a variety of familiar and unfamiliar business situations and contexts.

**AO3 Analysis**

Analyse business problems, issues and situations by:

- using appropriate methods and techniques to make sense of qualitative and quantitative business information
- searching for causes, impact and consequences
- distinguishing between factual evidence and opinion or value judgement
- drawing valid inferences and making valid generalisations.

**AO4 Evaluation**

Evaluate evidence in order to make reasoned judgements, present substantiated conclusions and, where appropriate, make recommendations for action and implementation.

**PUBLISHED**  
**Annotations**

<b><u>To award</u></b>	<b><u>Proposed annotation</u></b>	<b><u>Comment</u></b>
Correct		For objective points that are right or wrong.
Incorrect		For objective points that are wrong.
Unclear		When there is a misunderstanding in a response.
Too Vague		When the candidate has attempted something, but the mark/skill has not been awarded.
Highlight	Highlighter Or Underline	To highlight a point or section of an answer that justifies the mark/annotation.
Benefit of doubt		When the candidate has attempted something, and the mark/skill has been awarded.
On page comment	On page comment	Rarely used in live marking.
Not using text		When the context has not been used.
Seen		To show a page/section has been seen/read.
Not answering question		When the response is not focussed on answering the question.

<u>To award</u>	<u>Proposed annotation</u>	<u>Comment</u>
Repetition	<b>REP</b>	The repetition of a previous point in a response Or Candidate is copying the case study/data.
Own figure rule	<b>OFR</b>	The own figure rule applies – acts as a mark/tick.
Knowledge (AO1) L1	<b>K</b>	When AO1 has been awarded. Number of Ks should match the mark awarded.
Knowledge (AO1) L2		
Application (AO2) L1	<b>APP</b>	When AO2 has been awarded. Number of APPs should match the mark awarded.
Application (AO2) L2		
Analysis (AO3) L1	<b>AN</b>	When AO3 at Level 1 has been awarded.
Analysis (AO3) L2	<b>DEV</b>	When AO3 at Level 2 has been awarded.
Evaluation (AO4) L1	<b>EVAL</b>	When AO4 at Level 1 has been awarded.
Evaluation (AO4) L2	<b>E</b>	When AO4 at Level 2 has been awarded.
Evaluation (AO4) L3	<b>EE</b>	When AO4 at Level 3 has been awarded.

Question	Answer			Marks
1(a)(ii)	<b>Exemplar and annotations</b>	<b>Mark</b>	<b>Rationale</b>	
	Costs which are linked to the operations of a business <input type="checkbox"/> K. For example, a gold mine would need to pay <input type="checkbox"/> APP the miners who extract the gold <input type="checkbox"/> APP.	3	An answer which starts with the knowledge and then applies it to costs with an example.	
	Something a business pays <input type="checkbox"/> APP to make a product or service <input type="checkbox"/> K, such as raw materials <input type="checkbox"/> APP.	3	APP cannot be awarded without K, but once the K has been awarded you can go back and reward the APP. Any example (it does not need to come from the data) can be used.	
	Paid by a business <input type="checkbox"/> APP, to produce a service <input type="checkbox"/> K. The opposite of indirect costs which are not linked to production <input type="checkbox"/> APP.	3	One of the APPs can come from further explanation it does not have to be an example.	
	Costs that are directly related to the production process <input type="checkbox"/> K such as wages <input type="checkbox"/> APP.	2	No application of costs, so max 2 marks.	
	Costs that can be attributed to a specific cost centre <input type="checkbox"/> K unlike indirect costs which cannot <input type="checkbox"/> APP. An example of a direct cost for GT are the wages of the tour guides.	2	Knowledge of the direct element with good understanding. The example is fine, but no understanding of costs.	
	Production costs <input type="checkbox"/> K.	1	Simple knowledge of the direct element.	
	Costs which are directly accountable to a cost object <input type="checkbox"/> K such as the marketing of GT.	1	Knowledge of the direct element – ignore anything that is incorrect. No negative marking.	
	The things a business has to pay <input type="checkbox"/> TV. For example, a business may need to pay wages and advertising <input type="checkbox"/> TV.	0	Although there is some attempt at application, these marks cannot be awarded without knowledge.	
Direct costs are the same as variable costs <input type="checkbox"/> TV.	0	Variable costs share some characteristics with direct costs, but they are not the same.		

Question	Answer	Marks									
1(b)(i)	<p><b>Refer to Table 1.1. Calculate the change in GT’s total costs between 2020 and 2022.</b></p> <p><b>Indicative content.</b></p> <ul style="list-style-type: none"> <li>• Formula: total costs = total revenue – profit (1)</li> <li>• Calculation of cost in either 2020 or 2022 (1)                             <ul style="list-style-type: none"> <li>– Costs in 2020: \$3.4m – \$0.9m = \$2.5m</li> <li>– Costs in 2022: \$2.8m – 0.2m = \$2.6m</li> </ul> </li> <li>• Change in costs: \$2.6m – \$2.5m = \$0.1m (1 OFR)</li> </ul> <p>Answer = <b>\$0.1m (3)</b>                      Accept answer as a percentage 4% (with % sign) as full marks</p> <p><b>Exemplar and annotations</b></p> <table border="1" data-bbox="338 694 1921 1348"> <thead> <tr> <th data-bbox="338 694 869 761">Marks</th> <th data-bbox="869 694 1395 761"></th> <th data-bbox="1395 694 1921 761"></th> </tr> </thead> <tbody> <tr> <td data-bbox="338 761 869 1005">3 marks</td> <td data-bbox="869 761 1395 1005">                     Correct answer  <b>\$0.1m</b> or <b>4%</b> allow <b>0.1</b>                       allow  <math>(0.1 / 2.5) \times 100 = 4</math> (obviously meant as a percentage)                 </td> <td data-bbox="1395 761 1921 1005"> <b>Working and \$ do not matter.</b>                      If presented as a percentage, then % sign must be included for full marks                      OR clear and correct working shown.  <b>Must be three</b> ✓ to denote the three marks.                 </td> </tr> <tr> <td data-bbox="338 1005 869 1348">2 marks</td> <td data-bbox="869 1005 1395 1348"> <b>Two</b> of the following:                     <ul style="list-style-type: none"> <li>• Correct formula</li> <li>• Correct calculation of TC for 2020 (2.5)</li> <li>• Correct calculation of TC for 2022 (2.6)</li> </ul> <b>OR</b>                      An incorrect answer with one mistake allowing OFR for final stage.                 </td> <td data-bbox="1395 1005 1921 1348">                     To award two marks, there must be                     <ul style="list-style-type: none"> <li>• Two ✓ and a ✗</li> </ul> <b>OR</b> <ul style="list-style-type: none"> <li>• One ✓ , one ✗ and one <span style="border: 1px solid red; padding: 1px;">OFR</span></li> </ul> </td> </tr> </tbody> </table>	Marks			3 marks	Correct answer <b>\$0.1m</b> or <b>4%</b> allow <b>0.1</b>  allow $(0.1 / 2.5) \times 100 = 4$ (obviously meant as a percentage)	<b>Working and \$ do not matter.</b> If presented as a percentage, then % sign must be included for full marks OR clear and correct working shown. <b>Must be three</b> ✓ to denote the three marks.	2 marks	<b>Two</b> of the following: <ul style="list-style-type: none"> <li>• Correct formula</li> <li>• Correct calculation of TC for 2020 (2.5)</li> <li>• Correct calculation of TC for 2022 (2.6)</li> </ul> <b>OR</b> An incorrect answer with one mistake allowing OFR for final stage.	To award two marks, there must be <ul style="list-style-type: none"> <li>• Two ✓ and a ✗</li> </ul> <b>OR</b> <ul style="list-style-type: none"> <li>• One ✓ , one ✗ and one <span style="border: 1px solid red; padding: 1px;">OFR</span></li> </ul>	3

The size of GT can be measured by revenue <span style="border: 1px solid red; padding: 0 2px;">K</span> . GT's revenue decreased by 17.65% <span style="border: 1px solid red; padding: 0 2px;">APP</span> <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Revenue is a way to measure size and the candidate has used two pieces of data (revenue for 2020 and revenue for 2022) to come to a correct calculation. <i>It may be necessary to check calculations and allow for correct rounding.</i>	GT has got smaller <span style="border: 1px solid red; padding: 0 2px;">APP</span> since its visitors <span style="border: 1px solid red; padding: 0 2px;">K</span> have decreased to 0.65m <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Visitors (customers) is a way to measure size and the use of two data points for developed application.	
	2020	2021	2022																															
Sales revenue (\$m)	3.4	3.2	2.8																															
Number of employees	54	55	47																															
Profit (\$m)	0.9	0.3	0.2																															
Number of visitors (m)	0.8	0.8	0.65																															
Exemplar and annotations	Mark	Rationale																																
Number of employees <span style="border: 1px solid red; padding: 0 2px;">K</span> , in 2020 GT had 54 employees <span style="border: 1px solid red; padding: 0 2px;">APP</span> but this decreased to 46 in 2022 <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Number of employees is a way to measure size and the use of two data points shows developed application.																																
The size of GT can be measured by revenue <span style="border: 1px solid red; padding: 0 2px;">K</span> . GT's revenue decreased by 17.65% <span style="border: 1px solid red; padding: 0 2px;">APP</span> <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Revenue is a way to measure size and the candidate has used two pieces of data (revenue for 2020 and revenue for 2022) to come to a correct calculation. <i>It may be necessary to check calculations and allow for correct rounding.</i>																																
GT has got smaller <span style="border: 1px solid red; padding: 0 2px;">APP</span> since its visitors <span style="border: 1px solid red; padding: 0 2px;">K</span> have decreased to 0.65m <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Visitors (customers) is a way to measure size and the use of two data points for developed application.																																

Question	Answer			Marks
1(b)(ii)	<b>Exemplar and annotations</b>	<b>Mark</b>	<b>Rationale</b>	
	GT has gotten smaller, since their revenue <span style="border: 1px solid red; padding: 0 2px;">K</span> has fallen to \$2.8m <span style="border: 1px solid red; padding: 0 2px;">APP</span> and its visitors have also fallen to 0.65m <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Revenue is a way to measure size and the use of two data points for developed application.	
	As a theme park, visitor numbers <span style="border: 1px solid red; padding: 0 2px;">K</span> are an important way to measure size, which has fallen <span style="border: 1px solid red; padding: 0 2px;">APP</span> to 0.65m in 2022 <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Visitors is a way to measure size. The context of a theme park is limited application (go back and award after the K has been awarded) with a use of the data from Table 1.1 to develop this application.	
	Number of employees <span style="border: 1px solid red; padding: 0 2px;">K</span> has decreased <span style="border: 1px solid red; padding: 0 2px;">APP</span> to 46 in 2022 <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Only limited application through the use of one data point. It is not enough to state that it has 'decreased' – the figures must be used.	
	The number of people that GT employs <span style="border: 1px solid red; padding: 0 2px;">K</span> , such as the customer service operatives <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	2	Application does not need to come from the data in Table 1.1.	
	The number of visitors <span style="border: 1px solid red; padding: 0 2px;">K</span> is really important because the more visitors GT has, the more revenue it is likely to generate and the bigger its profit. This all stems from the visitors who are the customers of GT and therefore the most important way to measure the size of GT <span style="border: 1px solid red; padding: 0 2px;">NUT</span> .	1	No specific context used in this answer.	
	The size of GT can be measured by the number of factories <span style="border: 1px solid red; padding: 0 2px;">K</span> it has. The more factories the more it can produce.	1	AO1 knowledge does not need to be in context, so can be awarded, even if the answer does not match the context.	
A big business is likely to have more power in the market and can dominate the competition <span style="border: 1px solid red; padding: 0 2px;">TV</span> .	0	No valid way to measure the size of the business.

Question	Answer			Marks
2(a)(ii)	<b>Exemplar and annotations</b>	<b>Mark</b>	<b>Rationale</b>	
	Products which are changed based on customer preferences <span style="border: 1px solid red; padding: 0 2px;">K</span> , but still produced in large numbers <span style="border: 1px solid red; padding: 0 2px;">APP</span> for example T-Shirts with different designs <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	An answer which starts with the knowledge and then applies it to the mass element with an example.	
	Mass customisation usually capital intensive production <span style="border: 1px solid red; padding: 0 2px;">APP</span> by using IT systems to make slightly different products <span style="border: 1px solid red; padding: 0 2px;">K</span> , on a production line <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	APP cannot be awarded without K, but once the K has been awarded you can go back and reward the APP. Production line/assembly line/flow production is all fine for APP.	
	Products can be changed slightly <span style="border: 1px solid red; padding: 0 2px;">K</span> such as a car with different features <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	2	Knowledge and an example.	
	Products which can be adapted to meet the differing needs of customers <span style="border: 1px solid red; padding: 0 2px;">K</span> .	1	Simple knowledge of the direct element.	
	Large scale production with capital intensive operations <span style="border: 1px solid red; padding: 0 2px;">TV</span> . For example, a T-Shirt with different designs <span style="border: 1px solid red; padding: 0 2px;">TV</span> .	0	Although there is some attempt at application, these marks cannot be awarded without knowledge.

BBs fixed costs were \$23 280 <span style="border: 1px solid red; padding: 0 2px;">APP</span> last month, however this is likely to change if they introduce JIT <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Knowledge of a limitation with two pieces of context applied.	BB is considering introducing greater equality <span style="border: 1px solid red; padding: 0 2px;">APP</span> , which may increase the costs and the price may need to increase from \$50 <span style="border: 1px solid red; padding: 0 2px;">APP</span> which makes the break even calculations irrelevant <span style="border: 1px solid red; padding: 0 2px;">K</span> .	3	The APP cannot be awarded until there is knowledge, however you can go back and annotate it.	The variable costs of BB may not be constant <span style="border: 1px solid red; padding: 0 2px;">K</span> which could mean that the margin of safety will fall from 120 units <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	2	Knowledge and one piece of context.	Break even analysis assumes all output produced is sold <span style="border: 1px solid red; padding: 0 2px;">K</span> .	1	Knowledge and no application to the context.	
Exemplar and annotations	Mark	Rationale															
Break-even analysis assumes that fixed costs do not change <span style="border: 1px solid red; padding: 0 2px;">K</span> . BBs fixed costs were \$23 280 <span style="border: 1px solid red; padding: 0 2px;">APP</span> last month, however this is likely to change if they introduce JIT <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	3	Knowledge of a limitation with two pieces of context applied.															
BB is considering introducing greater equality <span style="border: 1px solid red; padding: 0 2px;">APP</span> , which may increase the costs and the price may need to increase from \$50 <span style="border: 1px solid red; padding: 0 2px;">APP</span> which makes the break even calculations irrelevant <span style="border: 1px solid red; padding: 0 2px;">K</span> .	3	The APP cannot be awarded until there is knowledge, however you can go back and annotate it.															
The variable costs of BB may not be constant <span style="border: 1px solid red; padding: 0 2px;">K</span> which could mean that the margin of safety will fall from 120 units <span style="border: 1px solid red; padding: 0 2px;">APP</span> .	2	Knowledge and one piece of context.															
Break even analysis assumes all output produced is sold <span style="border: 1px solid red; padding: 0 2px;">K</span> .	1	Knowledge and no application to the context.															

**PUBLISHED**

Question	Answer			Marks
2(b)(ii)	<b>Exemplar and annotations</b>	<b>Mark</b>	<b>Rationale</b>	
	Break even analysis is a way of calculating the quantity needed to stop making a loss and start making a profit. This is useful to BB because they can calculate how many teddy bears need to be sold to cover all of the costs, including the \$6 unit contribution.	0	Although there is some relevant context, there is no knowledge of a limitation, so no marks can be awarded.	

Question	Answer			Marks	
2(c)	<b>Analyse <u>two</u> possible impacts on BB of adopting a just in time (JIT) approach to inventory management.</b>			<b>8</b>

Question	Answer			Marks
2(d)	<b>L1</b> <span style="border: 1px solid red; padding: 0 2px;">EVAL</span> (limited supporting evidence)	<b>L2</b> <span style="border: 1px solid red; padding: 0 2px;">E</span> (developed supporting evidence)	<b>L3</b> <span style="border: 1px solid red; padding: 0 2px;">EE</span> (developed supporting evidence with context)	
	Motivation will have the biggest impact	Motivation will have the biggest impact because the employees will have a big effect on the amount of products that can be produced, limiting the output.	Motivation will have the biggest impact because BB uses mass customisation so the they will have a big effect on the amount of products produced, limiting the output,	
	The most important impact will be lower labour turnover.	The most important impact will be lower labour turnover because BB's business model relies on employing people, some of whom are not happy at the moment.	The most important impact will be lower labour turnover because BB's business model relies on employing people in the factory, some of whom are not happy at the moment, like David who is the only male in department.	
	All of this may depend upon what the owners want.	All of this may depend upon whether the owners care about happiness of all their employees or just see them as a cost burden on BB.	All of this may depend upon whether the owners care about happiness of all their employees, including David the only male in department, or just see them as a cost burden on BB.	
	It will be different in the short term, compared with the long term.	In the short term, equality will have a negative impact due to the increased costs incurred by BB, but in the long term it will have a beneficial impact because labour turnover will decrease.	In the short term, equality will have a negative impact due to the increased costs incurred by BB of building a new bathroom, but in the long term it will have a beneficial impact because labour turnover will decrease.	
	Some stakeholders will see it as a positive impact.	Employees may see it as a positive impact because they are getting equal rights, which might lead to better pay for some and make them feel more secure in their job.	Employees may see it as a positive impact because they are getting equal rights, which might lead to David getting equal access to a bathroom and not have to do all of the traditionally 'male' job roles.
