

Cambridge International AS & A Level

COMPUTER SCIE	NCE	9618/42
Paper 4 Practical		May/June 2023
MARK SCHEME		
Maximum Mark: 75		
	Published	

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

PUBLISHED

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond
 the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

© UCLES 2023 Page 2 of 37

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	1 mark each • Global array named Animals • 10 string elements	2
	Example Program code:	
	<pre>Java public static String[] Animals = new String[10];</pre>	
	VB.NET Dim Animals(9) As String	
	<pre>Python global Animals #array 10 elements string</pre>	

© UCLES 2023 Page 4 of 37

Question	Answer	Marks
1(b)	1 mark each	2
,	Storing all 10 items in the array	
	in the correct order and all in lower case	
	Example Program code:	
	Java	
	Animals[0] = "horse";	
	Animals[1] = "lion";	
	Animals[2] = "rabbit";	
	<pre>Animals[3] = "mouse";</pre>	
	Animals[4] = "bird";	
	Animals[5] = "deer";	
	<pre>Animals[6] = "whale";</pre>	
	Animals[7] = "elephant";	
	Animals[8] = "kangaroo";	
	Animals[9] = "tiger";	
	VB.NET	
	Sub Main()	
	Animals(0) = "horse"	
	Animals(1) = "lion"	
	Animals(2) = "rabbit"	
	Animals(3) = "mouse"	
	Animals(4) = "bird"	
	Animals(5) = "deer"	
	Animals(6) = "whale"	
	Animals(7) = "elephant"	
	Animals(8) = "kangaroo"	
	Animals(9) = "tiger"	
	End Sub	

© UCLES 2023 Page 5 of 37

Question	Answer	Marks
1(b)	<pre>Python #main Animals = [] Animals.append("horse") Animals.append("lion") Animals.append("rabbit") Animals.append("mouse") Animals.append("bird") Animals.append("deer") Animals.append("whale") Animals.append("elephant") Animals.append("kangaroo") Animals.append("tiger")</pre>	

© UCLES 2023 Page 6 of 37

Question	Answer	Marks
1(c)	1 mark for each completed statement to MAX 4	6
	 1 mark each: Use of appropriate string functions to access e.g. MID and length Remainder of procedure correct and following example 	
	<pre>Pseudocode: PROCEDURE SortDescending() DECLARE ArrayLength : INTEGER DECLARE Temp : STRING ArrayLength ← LENGTH(Animals) FOR X ← 0 TO ArrayLength - 1 FOR Y ← 0 TO (ArrayLength - X - 1) If MID(Animals[Y], 0, 1) < MID(Animals[Y+1], 0, 1) THEN Temp ← Animals[Y] Animals[Y] ← Animals[Y + 1] Animals[Y] + 1] ← Temp ENDIF NEXT Y NEXT X ENDPROCEDURE</pre>	
	Example Program code:	
	<pre>Java public static void SortDescending() { Integer ArrayLength = 10; String Temp = ""; for(Integer X = 0; X < ArrayLength - 1; X++) { for(Integer Y = 0; Y < ArrayLength-X-1; Y++) {</pre>

```
Question
                                                                                                          Marks
                                                     Answer
  1(c)
                  if(Animals[Y].charAt(0) < Animals[Y+1].charAt(0)){</pre>
                      Temp = Animals[Y];
                      Animals[Y] = Animals[Y+1];
                      Animals[Y+1] = Temp;
         VB.NET
         Sub SortDescending()
            Dim ArrayLength As Integer = 10
            Dim Temp As String = ""
            For X = 0 To ArrayLength - 1
               For Y = 0 To ArrayLength - X - 2
                  If Left(Animals(Y), 1) < Left(Animals(Y + 1), 1) Then
                      Temp = Animals(Y)
                      Animals(Y) = Animals(Y + 1)
                     Animals (Y + 1) = Temp
                  End If
               Next
            Next
         End Sub
         Python
         def SortDescending():
             ArrayLength = 10
             for X in range(0, ArrayLength-1):
                 for Y in range(0, ArrayLength-X-1):
                      if(Animals[Y][0] < Animals[Y+1][0]):</pre>
                        Temp = Animals[Y]
                        Animals[Y] = Animals[Y + 1]
                        Animals[Y + 1] = Temp
```

Question	Answer	Marks
1(d)(i)	1 mark each	3
	• calling the procedure SortDescending()	
	looping through all array elements authoriting each array element on a pay line.	
	outputting each array element on a new line	
	Example Program code:	
	Java	
	SortDescending();	
	for(Integer X = 0; X < 10; X++) {	
	System.out.println(Animals[X]);	
	}	
	VB.NET	
	SortDescending()	
	For $X = 0$ to 9	
	Console.WriteLine(Animals(X))	
	Next X	
	Python	
	SortDescending()	
	for X in range(0, 10):	
	<pre>print(Animals[X])</pre>

3(a)(i) 1 mark each

5

- Class Employee declaration (and end where appropriate)
- All 4 attributes declared with suitable data types, array with (min) 52 elements
- Constructor header within class (and end where appropriate) taking 3 parameters ...
- ...assigning parameters to attributes within constructor
- ...initialising 52 elements of array to 0.0 within constructor

Example Program code:

```
Java
```

```
class Employee{
   private Double HourlyPay;
   private String EmployeeNumber;
  private String JobTitle;
   private Double[] PayYear2022 = new Double[52];
   public Employee(String EmpNumP, Double PayP, String JobP){
      HourlyPay = PayP;
      EmployeeNumber = EmpNumP;
      JobTitle = JobP;
      for (Integer X = 0; X < 52; X++) {
         PayYear2022[X] = 0.0;
VB.NET
Class Employee
 Private HourlyPay As Single
 Private EmployeeNumber As String
 Private JobTitle As String
 Private PayYear2022(0 To 51) As Single
 Public Sub New (EmpNumP As String, PayP As Single, JobP As String)
   HourlyPay = PayP
   EmployeeNumber = EmpNumP
```

© UCLES 2023 Page 23 of 37

JobTitle = JobP

Question	Answer	Marks
3(a)(i)	For $X = 0$ To 51	
	PayYear2022(X) = 0.00	
	Next	
	End Sub	
	End Class	
	Python	
	class Employee:	
	#self. HourlyPay single	
	#self. EmployeeNumber string	
	#selfJobTitle string	
	definit(self, EmpNumP, PayP, JobP):	
	selfHourlyPay = PayP	
	<pre>selfEmployeeNumber = EmpNumP self. JobTitle = JobP</pre>	
	selfPayYear2022 = []#array 52 elements single	
	for x in range(0, 52): $A = \frac{1}{2} \left(\frac{1}{2} - \frac{1}{2} \right) \left(\frac{1}{2} - \frac{1}{2} - \frac{1}{2} \right) \left(\frac{1}{2} - \frac{1}{2} - \frac{1}{2} - \frac{1}{2} \right) \left(\frac{1}{2} - \frac{1}{2}$	
	selfPayYear2022.append(0.00)	

© UCLES 2023 Page 24 of 37

Question	Answer	Marks
3(a)(ii)	mark each Get method header (and end) with no parameters returning employee number (without overriding)	2
	Example program code:	
	<pre>Java public String GetEmployeeNumber() { return EmployeeNumber; }</pre>	
	VB.NET Public Function GetEmployeeNumber() Return EmployeeNumber End Function	
	<pre>Python def GetEmployeeNumber(self): return selfEmployeeNumber</pre>	

© UCLES 2023 Page 25 of 37

Question	Answer	Marks
3(a)(iii)	 1 mark each Method header (and close) with two parameters (week number and number of hours) Calculates pay as number of hours (parameter) * HourlyPay (attribute) stores result in correct index in PayYear2022 	3
	Example program code:	
	<pre>Java public void SetPay(Integer WeekNumber, Double Hours){ PayYear2022[WeekNumber - 1] = Hours * HourlyPay; }</pre>	
	<pre>VB.NET Overridable Sub SetPay(WeekNumber, Hours) PayYear2022(WeekNumber - 1) = Hours * HourlyPay End Sub</pre>	
	<pre>Python def SetPay(self, WeekNumber, Hours): selfPayYear2022[WeekNumber-1] = Hours * selfHourlyPay</pre>	

© UCLES 2023 Page 26 of 37

Question	Answer	Marks
3(a)(iv)	 1 mark each Method header (and close) and returning calculated total (ignore parameters, allow return of any reasonable attempt at calculation) Totalling all elements in PayYear2022 	2
	Example program code:	
	<pre>Java public Double GetTotalPay() { Double TotalPay = 0.0; for(Integer X = 0; X < 52; X++) { TotalPay = TotalPay + PayYear2022[X]; } return TotalPay; }</pre>	
	<pre>VB.NET Public Function GetTotalPay() Dim TotalPay As Single = 0 For X = 0 To 51 TotalPay = TotalPay + PayYear2022(X) Next Return TotalPay End Function</pre>	
	<pre>Python def GetTotalPay(self): TotalPay = 0 for X in range (0, 52): TotalPay = TotalPay + selfPayYear2022[X] return TotalPay</pre>	

© UCLES 2023 Page 27 of 37

Question	Answer	Marks
3(b)(i)	 1 mark each Class Manager header (and end) inheriting from Employee Constructor within class (and end) taking 4 parameters calling parent class constructor with 3 values from parameters Declaring BonusValue (real) and assigning parameter to it within constructor 	4
	Example program code:	
	<pre>Java class Manager extends Employee{ private Double BonusValue; public Manager(String EmpNumP, Double PayP, String JobP, Double BonusP) { super(EmpNumP, PayP, JobP); BonusValue = BonusP; } }</pre>	
	VB.NET Class Manager Inherits Employee Private BonusValue As Single Sub New(EmpNumP As String, PayP As Single, JobP As String, BonusP As Single) MyBase.New(EmpNumP, PayP, JobP) BonusValue = BonusP End Sub End Class	

© UCLES 2023 Page 28 of 37

Question	Answer	Marks
3(b)(i)	<pre>Python class Manager(Employee): #BonusValue single definit(self, EmpNumP, PayP, JobP, BonusP): super()init(EmpNumP, PayP, JobP) selfBonusValue = BonusP</pre>	
3(b)(ii)	 1 mark each Method SetPay header (and end) taking 2 parameters Calculating hours (from parameter) * bonus as a percentage Overriding / calling parent SetPay with week number from parameter and updated hours as parameters 	3
	Example program code:	
	<pre>Java public void SetPay(Integer WeekNumber, Double Hours) { super.SetPay(WeekNumber, Hours * ((BonusValue / 100) + 1)); }</pre>	
	<pre>VB.NET Overrides Sub SetPay(WeekNumber, Hours) MyBase.SetPay(WeekNumber, Hours * ((BonusValue / 100) + 1)) End Sub</pre>	
	Alternative VB.NET: Overloads Sub SetPay(WeekNumber, Hours) SetPay(WeekNumber, Hours * ((BonusValue / 100) + 1)) End Sub	
	<pre>Python def SetPay(self, WeekNumber, Hours): Hours = Hours * (1 + selfBonusValue / 100) super().SetPay(WeekNumber, Hours)</pre>
