## CAMBRIDGE INTERNATIONAL EXAMINATIONS

## MARK SCHEME for the May/June 2015 series

## 9701 CHEMISTRY

## 9701/41

Paper 4 (Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.
Cambridge is publishing the mark schemes for the May/June 2015 series for most Cambridge IGCSE ${ }^{\circledR}$, Cambridge International A and AS Level components and some Cambridge O Level components.

| (b) (i) | labelled diagrams <br> in words <br> - the enzyme has a specific shape or substrate shape is complementary to active site <br> - the substrate bonds/binds/fits to the active site or other substrates do not fit into active site | 1 1 |
| :---: | :---: | :---: |
| (ii) | labelled diagrams <br> or in words <br> - inhibitor binds to enzyme away from the active site or inhibitor binds to allosteric site <br> - this changes the shape (or structure) of the active site <br> - substrate no longer fits the active site | 1 1 1 |
| [Total: 10] |  |  |
| $9 \quad$ (a) (i) | use restriction enzymes or using an enzyme to break (the DNA) down into smaller fragments | 1 |
| (ii) | use the polymerase chain reaction or use DNA polymerase to replicate / copy (the sample of DNA) | 1 |
| (iii) | - amino acids have different charges <br> due to their side-chain/R group/pH/ $\mathrm{CO}_{2}{ }^{-}$and $\mathrm{NH}_{3}{ }^{+}$groups <br> - DNA fragments have negatively-charge phosphates(or $\mathrm{PO}_{4}$ ) or DNA has $\mathrm{PO}_{4}{ }^{3-}$ groups | 1 1 |
