#### UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

### MARK SCHEME for the June 2005 question paper

#### 9702 PHYSICS

9702/06

Paper 6, maximum mark 40

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. This shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the Report on the Examination.

CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2005 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Grade thresholds for Syllabus 9702 (Physics) in the June 2005 examination.

|             | maximum           | minimum mark required for grade: |    |    |  |
|-------------|-------------------|----------------------------------|----|----|--|
|             | mark<br>available | А                                | В  | Е  |  |
| Component 6 | 40                | 26                               | 23 | 14 |  |

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

### **Option P - Environmental Physics**

| 10  | (a)   | resources: total energy available/stored in Earth reserves: total energy that can be extracted (economically)  |                      |            |
|-----|---|--|----------------------|------------|
|     |   | reserves less than resources because some fossil fuels not recoverable/too expensive   | B1                   | [3]        |
|     | (b)   | formation takes place over millions/thousands of years fossil fuels will be exhausted in much less time than this  | B1<br>B1             | [2]        |
| 11  | (a)   | induction compression power EXHAUST open CLOSED CLOSED closed CLOSED CLOSED open [each column 1 mark, max 4]   | В4                   | [4]        |
|     | (b)   | <ul><li>(i) power is delivered (by a cylinder) on every stroke (so) smoother power output/torque</li><li>(ii) improved flow of gases (in and out of cylinder) increases efficiency of engine</li></ul>   | M1<br>A1<br>M1<br>A1 | [2]<br>[2] |
| 12  | <ul> <li>2 (a) (i) any agent/substance/waste that is detrimental to health or the environment</li> <li>(ii) 1 man-made: e.g. exhaust gases from cars (anything sensible)</li> <li>2 natural: e.g. volcanic emissions (anything sensible)</li> </ul> |  | B1<br>B1<br>B1<br>B1 | [2]<br>[2] |
|     | (b)   | carbon dioxide absorbed (by plants) with release of oxygen (transpiration) replaces water vapour (in atmosphere) either increasing CO <sub>2</sub> levels would cause temperature changes or anything sensible e.g. reference to biodiversity, weather patterns                                      | B1<br>B1             | [3]        |
| Opt | tion 1  | Γ - Telecommunications   |                      |            |
| 13  | (a)   | signal sampled at regular intervals signal voltage converted to a digital number transmitted as a series of groups of pulses pulses could be IR pulses in optic fibre (allow any sensible example) any other relevant physics (e.g. sample at twice max frequency, use parallel to series converter) | B1<br>B1<br>B1<br>B1 | [5]        |
|     | (b)   | e.g. can be regenerated to remove noise data can be added to check for/correct errors [anything sensible, 1 each, max 2]   | B2                   | [2]        |
| 14  | (a)   | <ul><li>(i) loss of energy/power (in the signal)</li><li>(ii) unwanted (random) signal</li></ul>   | B1<br>B1             | [1]<br>[1] |
|     | (b) (i) power/dB = $10 \lg(P_1/P_2)$<br>$25 = 10 \lg (P/(6.0 \times 10^{-19}))$<br>$P = 1.9 \times 10^{-16} W$<br>(ii) allowable loss = $10 \lg(7.0 \times 10^{-3})/(1.9 \times 10^{-16})$<br>= 136 dB<br>length = 136/1.7 = 80 km                  |  |                      | [2]<br>[3] |
|     | (c)   | signal amplifier/re-shaper at intervals along the fibre  | B1                   | [1]        |
