Paper 2 AS Level Structured Questions

May/June 2023

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

#### **INSTRUCTIONS**

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

#### **INFORMATION**

- The total mark for this paper is 60.
- The number of marks for each question or part question is shown in brackets [].

This document has 20 pages. Any blank pages are indicated.

#### Data

g	=	$9.81 \mathrm{ms^{-2}}$
С	=	$3.00 \times 10^8  \text{m s}^{-1}$
е	=	$1.60 \times 10^{-19} \mathrm{C}$
1 u	=	$1.66 \times 10^{-27} \mathrm{kg}$
$m_{\rm p}$	=	$1.67 \times 10^{-27} \mathrm{kg}$
$m_{ m e}$	=	$9.11 \times 10^{-31} \mathrm{kg}$
$N_{A}$	=	$6.02 \times 10^{23}  \text{mol}^{-1}$
R	=	8.31 J K <sup>-1</sup> mol <sup>-1</sup>
k	=	$1.38 \times 10^{-23} \mathrm{JK^{-1}}$
G	=	$6.67 \times 10^{-11} \mathrm{N}\mathrm{m}^2\mathrm{kg}^{-2}$
$\varepsilon_0$	=	$8.85 \times 10^{-12}  \text{F m}^{-1}$
$(\frac{1}{4\pi\varepsilon_0}$	=	$8.99 \times 10^9 \mathrm{mF^{-1}})$
h	=	$6.63 \times 10^{-34} \mathrm{J}\mathrm{s}$
σ	=	$5.67 \times 10^{-8}  \text{W m}^{-2}  \text{K}^{-4}$
	$c$ $e$ $1 u$ $m_p$ $m_e$ $N_A$ $R$ $k$ $G$ $(\frac{1}{4\pi\varepsilon_0}$ $h$	$c = 0$ $e = 0$ $1 u = 0$ $m_p = 0$ $m_e = 0$ $R = 0$

# **Formulae**

uniformly accelerated motion	s v <sup>2</sup>	= $ut + \frac{1}{2}at^2$ = $u^2 + 2as$
hydrostatic pressure	Δρ	= $\rho g \Delta h$
upthrust	F	= $\rho gV$
Doppler effect for sound waves	$f_{_{\mathrm{O}}}$	$= \frac{f_{\rm s} v}{v \pm v_{\rm s}}$
electric current	I	= Anvq
resistors in series	R	$= R_1 + R_2 +$
resistors in parallel	$\frac{1}{R}$	$= \frac{1}{R_1} + \frac{1}{R_2} + \dots$

(a)	(i)	(i) Define pressure.				
		[1]				
	(ii)	Use the answer to <b>(a)(i)</b> to show that the SI base units of pressure are kg m <sup>-1</sup> s <sup>-2</sup> .				
		[1]				
(b)		prizontal pipe has length $L$ and a circular cross-section of radius $R$ . A liquid of density $\rho$ is through the pipe. The mass $m$ of liquid flowing through the pipe in time $t$ is given by				
		$m = \frac{\pi(\rho_2 - \rho_1)R^4 \rho t}{8kL}$				
	whe	are $p_1$ and $p_2$ are the pressures at the ends of the pipe and $k$ is a constant.				
	Det	ermine the SI base units of k.				
		SI base units[3]				
(c)		experiment is performed to determine the value of $k$ by measuring the values of the other ntities in the equation in <b>(b)</b> .				
	The	values of L and R each have a percentage uncertainty of 2%.				
		te and explain, quantitatively, which of these two quantities contributes more to the centage uncertainty in the calculated value of $k$ .				
		[1]				
		[Total: 6]				

2 (a) State what is meant by the centre of gravity of an object.

[1]

**(b)** Two blocks are on a horizontal beam that is pivoted at its centre of gravity, as shown in Fig. 2.1.

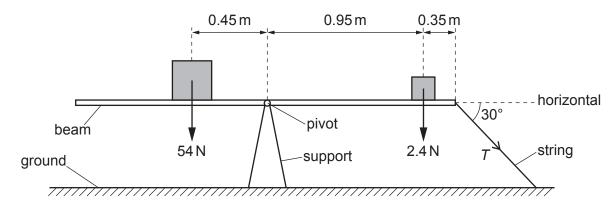

Fig. 2.1 (not to scale)

A large block of weight 54 N is a distance of 0.45 m from the pivot. A small block of weight 2.4 N is a distance of 0.95 m from the pivot and a distance of 0.35 m from the right-hand end of the beam.

The right-hand end of the beam is connected to the ground by a string that is at an angle of 30° to the horizontal. The beam is in equilibrium.

(i) By taking moments about the pivot, calculate the tension *T* in the string.

(ii) The string is cut so that the beam is no longer in equilibrium.

Calculate the magnitude of the resultant moment about the pivot acting on the beam immediately after the string is cut.

resultant moment = ......Nm [1]

(c) The beam in (b) rotates when the string is cut and the small block of weight 2.4 N is projected through the air. Fig. 2.2 shows the last part of the path of the block before it hits the ground at point Y.

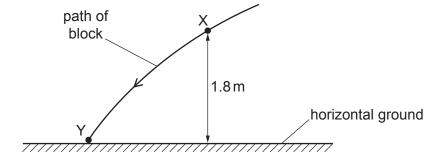

Fig. 2.2 (not to scale)

At point X on the path, the block has a speed of 3.4 m s<sup>-1</sup> and is at a height of 1.8 m above the horizontal ground. Air resistance is negligible.

(i) Calculate the decrease in the gravitational potential energy of the block for its movement from X to Y.

(ii) Use your answer to (c)(i) and conservation of energy to determine the kinetic energy of the block at Y.

kinetic energy = ...... J [3]

(iii) State the variation, if any, in the direction of the acceleration of the block as it moves from X to Y.

.....[1]

(iv) The block passes point X at time  $t_X$  and arrives at point Y at time  $t_Y$ .

On Fig. 2.3, sketch a graph to show the variation of the magnitude of the horizontal component of the velocity of the block with time from  $t_{\rm X}$  to  $t_{\rm Y}$ . Numerical values are not required.

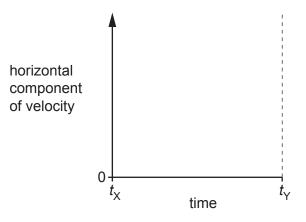

Fig. 2.3

[1]

[Total: 12]

# **BLANK PAGE**

3 A block is pulled by a force X in a straight line along a rough horizontal surface, as shown in Fig. 3.1.

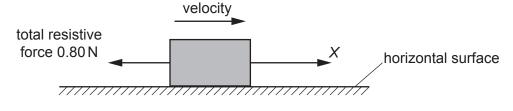

Fig. 3.1

Assume that the total resistive force opposing the motion of the block is 0.80 N at all speeds of the block.

The variation with time *t* of the magnitude of the force *X* is shown in Fig. 3.2.

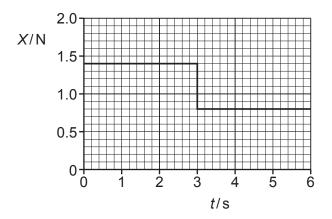

Fig. 3.2

(a)	(i)	Define force.
		[17]

(ii) Determine the change in momentum of the block from time t = 0 to time t = 3.0 s.

change in momentum = ..... kg m s<sup>-1</sup> [2]

(b)	(i)	Describe and explain the motion of the block between time $t = 3.0 \mathrm{s}$ and time $t = 6.0 \mathrm{s}$ .
		[2]

(ii) Force X produces a total power of 2.0 W when moving the block between time t = 3.0 s and time t = 6.0 s.

Calculate the distance moved by the block during this time interval.

(c) The block is at rest at time t = 0.

On Fig. 3.3, sketch a graph to show the variation of the momentum of the block with time t from t = 0 to t = 6.0 s.

Numerical values of momentum are not required.

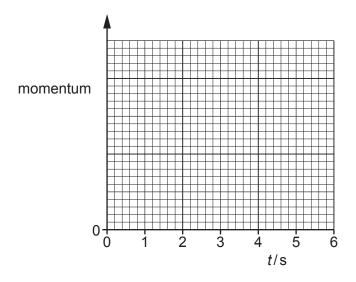

Fig. 3.3

[2]

[Total: 10]

4 A spring is suspended from a fixed point at one end. The spring is extended by a vertical force applied to the other end. The variation of the applied force *F* with the length *L* of the spring is shown in Fig. 4.1.

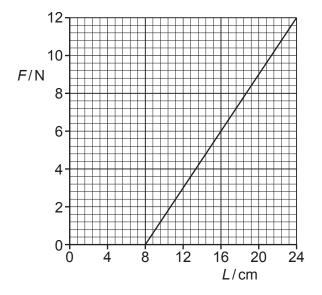

Fig. 4.1

For the spring:

(a)	state the name of the law that gives the relationship between the force and the extension	
		[1]
(b)	determine the spring constant, in N m <sup>-1</sup>	

spring constant = ......Nm<sup>-1</sup> [2]

(c)	determine	the elas	stic potentia	I energy	when	F=	6.0 N.
-----	-----------	----------	---------------	----------	------	----	--------

[Total: 5]

5	(a)	A progressive wave travels through a medium. The wave causes a particle of the medium to vibrate along a line P. The energy of the wave propagates along a line Q.
		Compare the directions of lines P and Q if the wave is:
		(i) a transverse wave
		[1]
		(ii) a longitudinal wave.
		[1]
	(b)	A tube is closed at one end. A loudspeaker is placed near the other end of the tube, as shown in Fig. 5.1.
		tube
		A A
		loudspeaker L
		Fig. 5.1 (not to scale)
		The loudspeaker emits sound of frequency 1.7 kHz. The speed of sound in the air in the tube is 340 m s <sup>-1</sup> . A stationary wave is formed with an antinode A at the open end of the tube. There is only one other antinode A inside the tube, as shown in Fig. 5.1.
		Determine:
		(i) the wavelength of the sound
		wavelength = m [2]
		(ii) the length L of the tube
		<i>L</i> =m [1]

(iii) the maximum wavelength of the sound from the loudspeaker that can produce a stationary wave in the tube.

maximum wavelength = ...... m [1]

(c) Two polarising filters are arranged so that their planes are vertical and parallel. The first filter has its transmission axis at an angle of  $35^{\circ}$  to the vertical and the second filter has its transmission axis at angle  $\alpha$  to the vertical, as shown in Fig. 5.2.

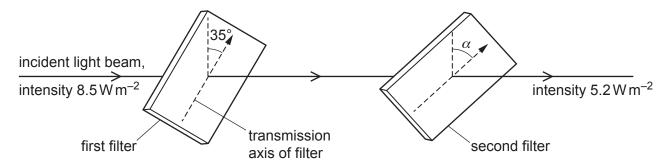

Fig. 5.2

Angle  $\alpha$  is greater than 35° and less than 90°. A beam of vertically polarised light of intensity 8.5 W m<sup>-2</sup> is incident normally on the first filter.

(i) Show that the intensity of the light transmitted by the first filter is 5.7 W m<sup>-2</sup>.

[1]

(ii) The intensity of the light transmitted by the second filter is  $5.2\,\mathrm{W\,m^{-2}}$ .

Calculate angle  $\alpha$ .

$$\alpha$$
 = .....° [2]

[Total: 9]

# **BLANK PAGE**

(a) The current in a filament lamp decreases.		
	Sta	te and explain how the resistance of the lamp changes.
		[1]
(b)	car	ylindrical wire has length $L$ and resistance $R$ . The <b>total</b> number of free electrons (charge riers) contained in the volume of the wire is $N$ . Each free electron has charge $e$ . The ential difference between the ends of the wire is $V$ .
	Det	ermine expressions, in terms of some or all of the symbols e, L, N, R and V for:
	(i)	the current in the wire
		current =[1]
	(ii)	the average drift speed of the free electrons
		average drift speed =[2]
	/:::\	
	(iii)	the average time taken for a free electron to move along the full length of the wire.
		time taken =[1]
		[Total: 5]

**7 (a)** A battery of electromotive force (e.m.f.) 9.0 V and negligible internal resistance is connected to a light-dependent resistor (LDR) and a fixed resistor, as shown in Fig. 7.1.

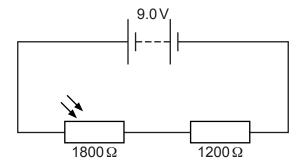

Fig. 7.1

The LDR and fixed resistor have resistances of  $1800 \Omega$  and  $1200 \Omega$  respectively.

Calculate the potential difference across the LDR.

**(b)** The circuit in **(a)** is now modified by adding a uniform resistance wire XY and a galvanometer, as shown in Fig. 7.2.

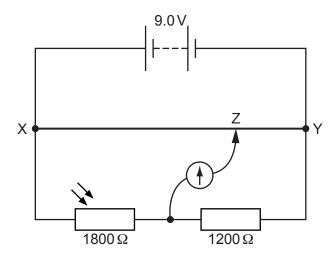

Fig. 7.2 (not to scale)

The length of the wire XY is 1.2m. The movable connection Z is positioned on the wire XY so that the galvanometer reading is zero.

(i)	Calculate the length XZ along the resistance wire.
	length XZ = m [2]
(ii)	The environmental conditions change causing a decrease in the resistance of the LDR The temperature of the LDR remains constant.
	State whether there is a decrease, increase or no change to:
	the intensity of the light illuminating the LDR
	the total power produced by the battery
	the length XZ so that the galvanometer reads zero.
	[3]
	[Total: 7]

# **BLANK PAGE**

[Total: 6]

8

(a)	Nuc	cleus	s P and nucleus Q are isotopes of the same element.		
Nucleus Q is unstable and emits a $\beta^-$ particle to form nucleus R.					
	(i)	For	r nuclei P and Q, compare:		
		•	the number of protons		
		•	the number of neutrons.		
			[2]		
	(ii)	Wh	nen nucleus Q decays to form nucleus R, the quark composition of a nucleon changes.		
		Sta	ate the change to the quark composition of the nucleon.		
			[1]		
	(iii)		ate the name of another particle that must be emitted from nucleus Q in addition to the particle.		
			[1]		
(b)	A h	adro	n consists of two charm quarks and one bottom quark.		
	Det	ermi	ine, in terms of the elementary charge e, the charge of the hadron.		
			charge =e [2]
