#### UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

GCE Advanced Subsidiary and Advanced Level

### MARK SCHEME for the June 2004 question papers

### 9706 ACCOUNTING

9706/01	Paper 1 (Multiple Choice), maximum raw mark 30
9706/02	Paper 2 (Structured Questions), maximum raw mark 90
9706/03	Paper 3 (Multiple Choice), maximum raw mark 30
9706/04	Paper 4 (Problem Solving), maximum raw mark 120

These mark schemes are published as an aid to teachers and students, to indicate the requirements of the examination. They show the basis on which Examiners were initially instructed to award marks. They do not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

• CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the June 2004 question papers for most IGCSE and GCE Advanced Level syllabuses.

	maximum	minimum	mark required	for grade:
	mark available	А	В	E
Component 1	30	21	19	14
Component 2	90	64	58	38
Component 3	30	22	20	14
Component 4	120	88	79	45

Grade thresholds taken for Syllabus 9706 (Accounting) in the June 2004 examination.

The thresholds (minimum marks) for Grades C and D are normally set by dividing the mark range between the B and the E thresholds into three. For example, if the difference between the B and the E threshold is 24 marks, the C threshold is set 8 marks below the B threshold and the D threshold is set another 8 marks down. If dividing the interval by three results in a fraction of a mark, then the threshold is normally rounded down.

#### AS ACCOUNTING - SUMMER 2004

AI		2002	2003
(a)			2005
(i)	Acid Test (Liquid) Ratio = CA-stock:CL,	1.61 :1	0.68 :1
(ii)	Stock turnover = CoGS/Ave stock	16.43 times	8.40 times
		22.21 days	43.45 days
(iii)	Debtors collection period = Debtorsx365/sales	61.64 days	89.43 days
(iv)	Gross Profit Ratio = GPx100/Sales	30.00 %	24.17 %
		0.30 :1	0.24 :1
(v)	Net Profit Ratio = NPx100/Sales	11,11 %	8.83 %
		0.11	0.08 :1
(vi)	ROCE = NP before int $x100$ /Cap employed	12.17 %	12.05 %

1 for each correct ratio to a maximum of (12)

If no suffix, award 1 for each correct pair:

If answer not to 2 decimal places, but correct working shown, full marks.

 Acid test worse, due to lack of cash because of expenditure on stock Stockturn worse due to surplus unsold stock Debtors collection worse due to poor credit control. GP ratio worse due to increased cost price not passed on to customer. NP ratio worse due to increased operating expenses. ROCE almost unchanged/slightly worse due to similar rates of change in capital and net profit

2 for each, maximum These answers are not exclusive - use your judgement. (12)

#### Fixed costs will have to be calculated in most cases.

 $\ensuremath{\textcircled{C}}$  University of Cambridge International Examinations 2004

(3)

#### (c) Option 1

Second most profitable option, but could lead to employees expecting overtime in future.

Option 2 Market research costs already spent, so no further outlay, and best net profit. But there may be teething troubles and possible re-training problems.

Option 3

No additional capital outlay, but possible problems of quality control. Any three relevant points

If unit costing used, award where correct.

#### (ii)

Shindig Ltd would not have purchased Goodwill.(1) The purchase of assets does not give rise to payment for Goodwill (1) Goodwill is only relevant when a company acquires a business as a going concern. (1)

The settlement would more likely to have been made in cash. (1)

The partnership business would not have been terminated (1)

	ACCOUNTING – JUNE 2004	9706	4	1

They have low sales value compared to the main products. (1)

- (ii) Waste products are processing debris. (1)
   Revenue derived from the sale of by-products and waste is deducted from total process costs. (1)
   [4]
- (f) Advantages of using standard costs
  - Standard cost can be used to facilitate the preparation of realistic budgets
  - Variances between budgeted and actual activity may identified/explained
  - Responsibility for variances may be allocated to persons involved
  - Standard costs facilitate the preparation of estimates for new products\quotations for jobs. (1 mark for each point. Maximum 4 points) [4]

[5]

Discounted payback period = 4 years 7 months. (1)

(c) (i) Calculation of IRR	\$	\$
10%	(300 000) 20%	(300 000)
Years 1 – 4 \$80 000 X 3.169	253 520 Years 1 – 4 \$80 000 X 2.588	207 040 (4)
5 \$130 000 X 0.621	<u>80 730</u> (1) 5 \$130 000 X 0.402	<u>52 260</u> (1)
NPV	<u>34 250</u> (1) (OF)	<u>(40 700</u> ) (1)(OF)
$IRR = 10\% + (10\% X^{34250}) / /$	(1)(OF) = 14.6% (1)(OF)	[10]

(ii) The directors may purchase the machine because the ARR is well above the rate currently being earned by the company (1) and The IRR at 14.7% is almost in line with the rate currently being earned. (1) The payback period is acceptable (1) because it is within the life of the project (1) [3]

Page 6	Mark Scheme	Syllabus	Paper
	ACCOUNTING – JUNE 2004	9706	4

#### (d) Accounting rate of return

Advantages

- profitability of a project may be compared with present profitability of business
- it is relatively easy to calculate

Disadvantages

- average annual profit may not be typical of any year
- timing of cash inflows and outflows is ignored
- it ignores the payback risk factor
- it ignores the time value of money
- 'profit' is subjective (provisions for depreciation, bad debts etc.)
- no commonly accepted method of calculating capital employed
- ignores duration of project

Payback period

- Advantages
- it is relatively easy to calculate
- calculation of net cash flows is less subjective than calculation of profitability
- where competing projects are being considered, the risk factors may be compared
- short payback periods benefit business's liquidity and facilitate faster growth

#### Disadvantages

- life expectancy of project is ignored
- different projects may have similar payback periods but different patterns of cash flows
- time value of money may be ignored

#### Internal rate of return

Advantages

- indicates return actually to be expected from expenditure
- may assist in ranking different proposals
- often used in businesses
- recognises time value of money

Disadvantages

- more difficult to calculate than NPV
- NPV is usually more useful in ranking different projects
  - (1 method discussed maximum 8

2 methods discussed – maximum 10

3 methods discussed – maximum 12)
