MARK SCHEME for the May/June 2006 question paper

9706 ACCOUNTING

9706/02

Paper 2 – Structured Questions

Maximum raw mark 90

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were initially instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began. Any substantial changes to the mark scheme that arose from these discussions will be recorded in the published *Report on the Examination*.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the *Report on the Examination*.

The minimum marks in these components needed for various grades were previously published with these mark schemes, but are now instead included in the Report on the Examination for this session.

- CIE will not enter into discussion or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the May/June 2006 question papers for most IGCSE and GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

- (c) (i) Current ratio = 341760:324800 = 1.05:1 1
- (ii) Liquidity ratio = 341760-204000:324800 = 0.42:1 1
- (iii) For financial security it is important that current assets are sufficient to cover current liabilities – this is just the case here. However, the liquidity ratio suggests that current assets excluding stock, which can be illiquid, should cover current liabilities – not the case here, and Peter Jordan may have problems as debts become due. 4 [6]

(ii) Income and Expenditure account for the year ended 30 April 2006

INCOME

Subscription = 72 000 + 2 000 + 1 800 – 1 400	74 400	4
Restaurant profit	36 000	1
Annual dance = 8 900 – 4 950 – 320	3 630	3
Profit on sale of equipment	2 000	1
Bank interest	<u>100</u>	1
	116 130	

EXPENDITURE

National club fees	3 000	1
Loan interest	2 200	1
Repairs and maintenance	12 400	1
Electricity	12 000	1
Restaurant wages	60 000	1
Depreciation – equipment	13 200	1
Depreciation – fixtures and fittings	600	1
Surplus	<u>103 400</u>	1
	<u>12 730</u>	1 [18]

- (c) (i)** The receipts and payments account shows no records of assets other than the bank balance and any assets bought or sold during the year. This is unsatisfactory as a club may have assets worth thousands of dollars.
- (ii)** No depreciation of fixed assets is provided for.
- (iii)** No record of liabilities other than possibly bank balance, so no way of telling if club is in debt, other than by asking treasurer.
- (iv)** No knowledge of surplus or deficit for year which would help in determining subscriptions for year etc.

Any three to maximum [3]**Total [30]**

- 3 (a)** Each of the three products had a positive contribution, and the business as a whole was showing a profit. If any production line was closed then the fixed costs allocated to it would have to be split between the other two production lines and the profit would turn to a loss.
