MARK SCHEME for the October/November 2006 question paper

9706 ACCOUNTING

9706/02 Paper 2 (Structured Questions – Core), maximum raw mark 90

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

The grade thresholds for various grades are published in the report on the examination for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2006 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

- (b) Goodwill is taken into account on the retiral of a partner, who must be credited with his share of Goodwill. An incoming partner must compensate the existing partners for his acquired share of Goodwill. In this situation Goodwill may be raised in the books of account as an asset, but it is considered prudent to adjust individual capital accounts in order to compensate each partner when partners retire from or join a partnership.

|---|------------------|-------|
| 1 | Profit | 1 |
| 2 | Loss | 1 |
| 3 | Sales | 1 |
| 4 | Break-even point | 1 (4) |

- (ii) Break-even = Fixed costs/unit contribution = 95.2381 units = \$2,857.14
 OR 96 \$2880
 1 1 1 1
 (accept rounding either way) (4)

- (iii) Margin of safety is the distance between break-even point and expected level of activity.
 It shows the amount by which actual activity can fall short of expected activity before a loss is incurred.
 It is a measure of risk

- (iv) $300 - 96 = 204 \text{ units} = \6120
 2 1 1 (4)

- (b)(i) New fixed costs = 115% of \$2000 = \$2300
 New break-even = $2300/21 = 109.52381 \text{ Units}$
 New profit = $(400 - 109.52381) \times 21 = \6100
 1 1 1 1
 Candidate may round B/E to 109 or 110 in which case accept answer of 6090 or 6111.
 OR
 Profit = Sales - (VC + FC)
 = $400 \times 30 - ((400 \times 9) + 2300)$
 = $12000 - (3600 + 2300) = \6100
