ACCOUNTING

Paper 3 Structured Questions MARK SCHEME Maximum Mark: 150 9706/32 October/November 2022

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2022 series for most Cambridge IGCSE[™], Cambridge International A and AS Level components and some Cambridge O Level components.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Cambridge International AS & A Level – Mark Scheme PUBLISHED Social Science-Specific Marking Principles (for point-based marking)

1 Components using point-based marking:

• Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- **a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- **b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- **c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- **d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- **e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- **f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- **g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

2 Presentation of mark scheme:

- Slashes (/) or the word 'or' separate alternative ways of making the same point.
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points.
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

3 Calculation questions:

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown.
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages.
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

4 Annotation:

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking.
- For levels of response marking, the level awarded should be annotated on the script.
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

ANNOTATIONS

The following annotations are used in marking this paper and should be used by examiners.

Annotation	Use or meaning
✓	Correct and relevant point made in answering the question.
×	Incorrect point or error made.
LNK	Two statements are linked.
REP	Repeat
A	An extraneous figure
NO	No working shown
AE	Attempts evaluation
R1	Required item 1
R2	Required item 2
OF	Own figure
EVAL	Evaluation
NAQ	Not answered question
BOD	Benefit of the doubt given.
SEEN	Noted but no credit given
Highlight	Highlight

2(c)	The dividend on her shares is \$8 100 per annum (1). The interest would be \$10 800 per annum (1). However, interest rates and/or dividends might change in the future (1). If Sarah needs short term income then it would be better to sell the shares (1). But selling costs would be incurred if the shares were sold (1). As Sarah has a substantial shareholding she may find it difficult to find a buyer for her shares. (1) The company may be retaining a high proportion of its profit to fund further expansion/more business purchases so dividends may not increase (1). However, in the longer term there could be more capital gains as the share price could continue to increase (1).	5

4(c)	Any two factory costs for (1) mark each, e.g. factors	ctory rent, factory in	surance	2

Question	Answer	Marks
4(d)	The rate of factory profit will not affect the total profit for the year (1). A higher rate of factory profit will increase the staff bonus (1) but will reduce the profit (1). However, staff will want to earn their bonuses and will be motivated to be more productive (1). In 2020 the transfer price including factory profit is \$50.40 (1) but the buying in price is \$44 so the rate of factory profit is not suitable (1) In 2021 the transfer price including factory profit is \$53.13 (1) but the buying in price is \$41.65 so the rate of factory profit is again not suitable (1) Cost of manufacture has risen (1) whilst for competitors it has fallen (1) indicating that the factory has become less efficient (1) and so bonuses are not reasonable (1). Max 6 Accept other valid responses.	6

5(c)	To identify cash shortages (To identify cash surpluses (1) 1)							2	
5(d)	This would simplify the setting of the selling price (1). This would avoid the profit per unit falling in months when overtime is payable (1). When production increases the costs also increase resulting in an increased selling price (1). This may make customers unwilling to pay (1). Would these prices be comparable to those of competitors? (1) A slightly lower profit per unit is already more than compensated for by the increase in the volume of sales (1). Accept other valid responses. Decision (1) and comments max. 3								4

Question	Answer	Marks
6(d)	The increase in production would decrease unit costs (1) and decrease selling price by very slightly more than the desired \$3 (1) which is not a lot in comparison to the existing mark up of \$34.12. (1) The directors could just decide to reduce the rate/amount of mark up (1). The mark up decreases anyway by \$1.08 from this policy (1)OF.	7
	The directors cannot be sure the company will be able to sell all the extra units (1). It could be left with a large inventory of finished goods (1). The strategy is risky (1).	
	It may not be possible to increase production so substantially without investing in extra machines or renting extra factory space (1). Additional workers may not be available at short notice (1). Product quality may be negatively affected. (1) There would be knock-on effects with Product A as well (1). As labour costs would increase for all factory workers, direct labour for Product A would increase by \$2 per unit, resulting in an increase in selling price of \$3 per unit (1). So this policy may merely move the problem from one product to another (1).	
	Decision (1) and comments max. (6) Accept other valid responses.
