Paper 2 Pure Mathematics 2

October/November 2020

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has **16** pages. Blank pages are indicated.

BLANK PAGE

- 3 (a) Sketch, on a single diagram, the graphs of $y = \left| \frac{1}{2}x - a \right|$ and $y = \frac{3}{2}x - \frac{1}{2}a$, where a is a positive constant. [2]

- (b) Find the coordinates of the point of intersection of the two graphs. [3]

4

The diagram shows the curve with equation $y = \frac{x-2}{x^2+8}$. The shaded region is bounded by the curve and the lines $x = 14$ and $y = 0$.

(a) Find $\frac{dy}{dx}$ and hence determine the exact x -coordinates of the stationary points. [4]

7

A curve has equation $y = f(x)$ where $f(x) = x^4 - 5x^3 + 6x^2 + 5x - 15$. As shown in the diagram, the curve crosses the x -axis at the points A and B with coordinates $(a, 0)$ and $(b, 0)$ respectively.

- (a) Use the factor theorem to show that $(x - 3)$ is a factor of $f(x)$. [2]

.....

.....

.....

.....

.....

- (b) By first finding the quotient when $f(x)$ is divided by $(x - 3)$, show that

$$a = -\sqrt{\frac{5}{2-a}}. \quad [5]$$
