## Module M1

## Paper B

## MARKING GUIDE

This guide is intended to be as helpful as possible to teachers by providing concise solutions and indicating how marks should be awarded. There are obviously alternative methods that would also gain full marks.

Method marks (M) are awarded for knowing and using a method.
Accuracy marks (A) can only be awarded when a correct method has been used.
(B) marks are independent of method marks.

## M1 Paper B - Marking Guide

1. (a) $a=\frac{\Delta \boldsymbol{v}}{t}=\frac{1}{2}[(4 \mathbf{i}-7 \mathbf{j})-(-2 \mathbf{i}+\mathbf{j})]=3 \mathbf{i}-4 \mathbf{j}$

M1 A1
(b) $\boldsymbol{F}=m \boldsymbol{a}=5(3 \mathbf{i}-4 \mathbf{j})$

M1
mag. of $\boldsymbol{F}=5 \sqrt{ }\left(3^{2}+4^{2}\right)=25 \mathrm{~N}$
M1 A1
req'd angle $=\tan ^{-1} \frac{3}{4}=37^{\circ}$ to nearest degree
M1 A1
2. (a) cons. of mom: $3 m u-2 m u=2 m v$ ( $\operatorname{dir}^{\mathrm{n}}$ of $B$ after coll. taken as +ve )

$$
m u=2 m v \therefore v=\frac{1}{2} u
$$

hence, speed of $B$ halved and change of sign means dir ${ }^{\mathrm{n}}$ has reversed $\quad$ B1
(b) impulse $=\Delta$ mom: i.e. for $A, 9 m=0-(-3 m u) \quad$ M2
$9 m=3 m u \therefore u=3$
A1
(7)
3.

(a) resolve $\uparrow: 3 T=180 g$ M1
$T=60 g$, so tension in cable at $P=120 g$.
(b) moments about $P: 100 g x+60 g(1.25)+20 g(1.5)=3 T$

M2 A1
$100 g x=75 g$, so $x=0.75$ and hence $B P=0.75 \mathrm{~m}$
M1 A1
(c) (i) weight acts at middle of platform

B1
(ii) platform doesn't bend

B1
(9)
4. (a) use of $s=u t+\frac{1}{2} a t^{2}$ for $O L(54 \mathrm{~m}, t=1)$ and $O M(144 \mathrm{~m}, t=4)$
to give $54=u+\frac{1}{2} a \quad$ and $\quad 144=4 u+8 a$
solve simult. to give $a={ }^{-1} 12 \mathrm{~ms}^{-2}$
M1 A1
(b) for $O N, u=60, a=-12, v=0$

M1
$v^{2}=u^{2}+2 a s$, so $0=3600-24 s$
M1
$s=150 \mathrm{~m}$, so $M N=150-144=6 \mathrm{~m}$.
M1 A1
5. (a)

B2
(b) resolve perp. to plane: $R-2 g \cos 30^{\circ}=0 \quad \therefore R=g \sqrt{ } 3$

M1 A1
$F=\mu R=\frac{1}{\sqrt{3}} g \sqrt{3}=g$
resolve // to plane: $H-F-2 g \sin 30^{\circ}=0$
M1 A1
$H-g-g=0 \quad \therefore H=2 g$
$F: H=g: 2 g=1: 2$
M1
A1
A1
(c) friction varies between $\mu R$ up plane (to prevent movement down plane) and $\mu R$ down plane (to prevent movement up plane)
6.

(a) $\operatorname{acc}^{\mathrm{n}}=\frac{25-0}{20}=\frac{5}{4} \mathrm{~ms}^{-2}$

M1 A1
for car and van, eqn. of motion is $D-1200=2000 \times \frac{5}{4}$ M1
$D=3700$ N
(b) 1200 divided in ratio $1.25: 0.75$ i.e. $5: 3$
car resistance $=\frac{5}{8} \times 1200=750 \mathrm{~N}$, so caravan resistance is $450 \mathrm{~N} \quad$ A1
for car, eqn. of motion is $3700-750-T=1250 \times \frac{5}{4}$
M1
$T=1387.5 \mathrm{~N}$
A1
(c) for van, $-450=750 a \therefore a=-\frac{3}{5} \mathrm{~ms}^{-2}$

M1A1
$u=25, v=0, a=-\frac{3}{5}$ use $v^{2}=u^{2}+2 a s$
M1
$0=625-\frac{6}{5} s \quad \therefore s=520.8 \mathrm{~m}$
M1 A1
(d) e.g. caravan may nose down at front, may not stay in a straight line

B1 so dist. likely to be less than that calculated in (c)
7. (a) dist. between Alison and Bill $\left.=\sqrt{ }\left[(-5)^{2}+12^{2}\right)\right]=13 \mathrm{~km}$

M1 A1
(b) $|3 \mathbf{i}+\mathbf{j}|=\sqrt{ } 10 ;$ speed $=2 \sqrt{ } 10$

M1
$\therefore \mathbf{v}=2(3 \mathbf{i}+\mathbf{j})=6 \mathbf{i}+2 \mathbf{j}$
M1 A1
(c) after $t$ hours, Alison is at $(2 t) \mathbf{i}+(5 t) \mathbf{j}$

M1 A1
Bill is at $(6 t-5) \mathbf{i}+(2 t+12) \mathbf{j}$
A1
rel to $A$, pos ${ }^{\text {n }}$ vector of $B$ is $(6 t-5-2 t) \mathbf{i}+(2 t+12-5 t) \mathbf{j}$
M1
$=(4 t-5) \mathbf{i}+(12-3 t) \mathbf{j} \quad \mathrm{km}$
(d) $d^{2}=(4 t-5)^{2}+(12-3 t)^{2}$ M1
$=16 t^{2}-40 t+25+144-72 t+9 t^{2}=25 t^{2}-112 t+169$
(e) $d^{2}<121 \therefore 25 t^{2}-112 t+169<121$
$25 t^{2}-112 t+48<0$, so $(25 t-12)(t-4)<0$
suitable method to get $\frac{12}{25}<t<4$
length of time $=3 \frac{13}{25}$ hours $=3$ hours 31 minutes (to nearest minute)
