Cambridge International Advanced Subsidiary and Advanced Level

MARK SCHEME for the October/November 2015 series

9702 PHYSICS

9702/43

Paper 4 (A2 Structured Questions), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

= 171 J

work done =
$$p\Delta V$$

= 1.2 × 10⁵ × 950 × 10⁻⁶ C1
= 114 J C1

4 (a) acceleration/force proportional to distance from a fixed point or displacement M1

either acceleration/force and displacement in opposite directions
 or acceleration/force (always) directed towards a fixed point/mean
 position/equilibrium position
 A1 [2]

(b)
$$h \rho g = Mg/A$$
 B1
 $h \times 790 \times 4.9 \times 10^{-4} = 70 \times 10^{-3}$ leading to $h = 0.18$ m or 18 cm A1 [2]

(c) (i) 1.
$$\omega^2 = (790 \times 4.9 \times 10^{-4} \times 9.81)/(70 \times 10^{-3})$$
 C1 = 54.25

$$\omega = 7.37 \,(\text{rad s}^{-1})$$

period $(= 2\pi/\omega) = 0.85 \,\text{s}$

$$t_1 = 0.43 \text{ s}$$
 A1 [3]

2.
$$t_3 = 1.28 \text{ s} (allow 2 \text{ s.f.})$$
 A1 [1]

(ii) energy of peak =
$$\frac{1}{2}M\omega^2x_0^2$$
 B1

change =
$$\frac{1}{2} \times 70 \times 10^{-3} \times 54.25 \{(2.2 \times 10^{-2})^2 - (1.0 \times 10^{-2})^2\}$$
 C1
