Pearson Edexcel International Advanced Level In Biology Pearson Edexcel (WBI06) Paper 01 Practical Biology and Investigative Skills

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Question Number	Answer	Additional guidance	Mark
1(a)	1. method of touching worm qualified ;	1. e.g. use a glass rod, use a cotton bud, touch with the same force IGNORE touch with finger unqualified	
	2. description of how to obtain quantitative results ;	2. e.g. record time taken for the worm to extend, number of stimuli / time before there is no response	
	3. need for earthworms to { recover / acclimatise } ;		
	4. standardised method to adjust light intensity;	4. e.g. closing the blinds, use different wattage lightbulbs, alter the distance from light source	
	5. use { several / other / more } earthworms at each light intensity;	5. e.g. minimum of 3 worms	
	6. repeat and calculate mean values ;	6. ACCEPT average	
			(5)

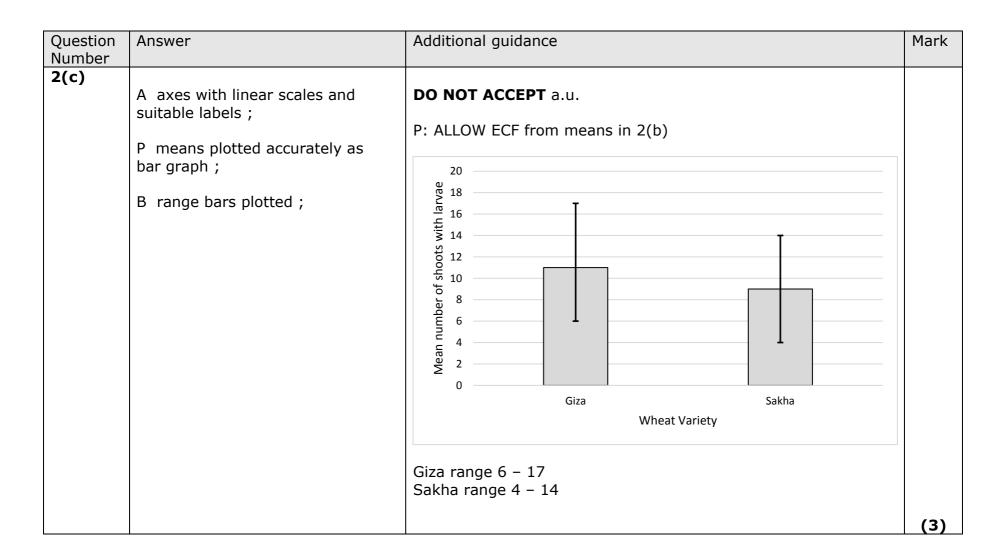

Question Number	Answer	Additional guidance	Mark
1(b)(i)	 { age / size / species / mass / length / eq } of earthworm; temperature; 		
	3. humidity / eq ;	3. ACCEPT moisture	(2)

Question Number	Answer	Additional guidance	Mark	
1(b)(ii)	1. method of control of variable ;	1. ACCEPT methods of control variables not given credit in 1(b)(i) e.g. noise		
	2. effect if variable not controlled;	1(<i>b</i>)(<i>i</i>) e.g. noise	(2)	

Question Number	Answer	Additional guidance	Mark
1(c)	1. each response uses { energy / ATP };	1. ACCEPT wastes energy OR energy is not wasted / saved or is conserved (if worm is habituated)	
	2. (this) energy could be used for a named purpose;	2. e.g. growth / reproduction / movement / digestion / feeding / avoiding predators IGNORE respiration / metabolism unqualified	
	3. idea that response to a repeated stimulus does not increase chance of survival;	3. ACCEPT not responding to a repeated stimulus increases chance of survival	
	 the earthworm is showing a form of { learning / habituation }; 		
		'There will be more energy for feeding' gains MP1 and 2	(3)

Question Number	Answer	Additional guidance	Mark
2(a)	 there is no significant difference; between the variety of wheat and the number of infected shoots / eq; 	ACCEPT for MP1 and MP2 'the difference between the number of infected shoots of each variety is not significant'	(2)

Question Number	Answer	Additiona	l gui	danc	е											Mark
2(b)	1. two means correctly calculated to the same number of decimal places;		1. Giza 11, 11.3 or 11.25 and Sakha 9, 8.8, 8.75 Example table:													
	2. table drawn with headings;	Wheat Variety	Nun	nber	of sh	oots	with	larva	ae						Mean	
		Giza	10	12	15	17	12	6	13	10	12	13	7	8	11.3	
	3. all raw data and means entered in table;	Sakha	4	6	5	13	7	6	13	9	14	11	10	7	8.8	
	table ,															(3)

Question Number	Answer	Additional guidance	Mark
2(d)	 37 identified (as critical value at p=0.05); the { calculated value / eq } is greater than the { critical value / eq }; the null hypothesis can be accepted; there is no significant difference between variety of wheat and the number of infected shoots / eq; comment on variability of data; 	2. 44 is greater than 37 = MPs 1 & 2	
			(4)

Question	Answer		Mark
Number			
2(e)	idea that a named environmental factor may not have been taken into consideration;	1. e.g. soil type, mineral content, humidity, temperature, planting density, light intensity, wind speed, pesticides, water	
	small sample size / only 12 samples of each wheat variety / eq;	2. IGNORE only 12 plants	
	3. only one set of data;4. wide variability in results / comment on { large / overlapping } range bars;	3. ACCEPT different times of year / places	
	5. difficulty of identifying { larvae / infected shoots } / eq ;	5. IGNORE counting errors unqualified	(3)

Question Number	Answer	Additional guidance	Mark
3(a)	1. allows population to grow rapidly / eq;	IGNORE increase unqualified	
	2. idea of exploiting favourable conditions;	2. e.g. food source availability	
	3. idea of less chance of eggs being eaten ;	3. ACCEPT reduced chance of predation of an individual IGNORE damage to eggs	
	 idea that large population increases the { gene pool / genetic variability }; 		(2)

Question Number	Answer	Additional guidance	Mark
3(b)(i)	1. practise method to see if it will work / eq;		
	check { most suitable number / mass / viability / eq } of eggs to use / eq ;		
	3. select suitable copper ion concentrations / eq;		
	4. find the time for the eggs to hatch / find method for counting the larvae / eq;	4. ACCEPT hatched eggs	
	5. identify an environmental condition to control { temperature / salinity / pH / oxygen concentration / light intensity };		
			(4)

Question Number	Answer	Additional guidance	Mark
3(b)(ii)		Max. 8 marks from this section. Two marks are reserved for QWC.	
	1. clear statement of dependent variable ;	1. e.g. number of eggs hatched / time for eggs to hatch / hatching rate	
	2. identification of the independent variable ;	2. e.g. a range of copper concentrations / stated range (minimum 5) / presence and absence of copper ions	
	3. identification of one variable, other than copper ions, that could affect egg hatching;	For MP3 and MP5. e.g. concentration of other ions / light intensity / temperature / pH / salt concentration / oxygen concentration / source of eggs / age of eggs / species of eggs	
	 description of how this variable can be { controlled / minimised }; 	IGNORE a stated temperature unqualified	
	identification of second variable, other than copper, that could affect egg hatching;		(0)
	6. description of how this second variable can be { controlled / minimised } ;		(8) Expert
			+ 2 QWC (see below)

	7. suitable	time interval(s) for counting egg hatching;	7. e.g. stated intervals in hours or days and a minimum of 2 counts ACCEPT one stated time to count eggs hatched			
	8. clear ref experim	erence to need to repeat the whole ent ;	8. DO NOT ACCEPT replicate at each concentration			
		of calculating rate of hatching; ce to a control (with no copper);	9. ACCEPT calculate percentage hatched or number of eggs hatched per unit time			
Level	Mark	Descriptor				
Level 1	0	The account is very disorganised and is very difficult to follow. Scientific vocabulary is very limited with many spelling and grammatical errors.				
Level 2	1	There is some disorganisation in the account which is not always in the correct sequence. Some relevant scientific vocabulary is used. The account is not always in continuous prose and there are grammatical errors and some important spelling mistakes.				
Level 3	2	The account is well organised with no undue repetition and a correct sequence. There is good use of scientific vocabulary in the context of the investigation described. The account is written in continuous prose which is grammatically sound with no major spelling errors.				

Question Number	Answer	Additional guidance	Mark
3(b)(iii)	1. clear table with headings and appropriate units;	1. DO NOT ACCEPT a.u. IGNORE temperatures entered in the table	
	2. means calculated from repeated data / eq;	2. ACCEPT a space headed 'mean' if appropriate	
	3. graph format appropriate to data, with correctly labelled axes;	3. e.g. scatter / line ACCEPT bar graph for presence / absence only	
	4. statistical test appropriate to data ;	4. e.g. use of correlation test (Spearman's rank / eq) / suitable test to compare numbers (t- test / Mann-Whitney U test / eq) for presence / absence	(4)

Question Number	Answer	Additional guidance	Mark
3(b)(iv)	 difficult to control all other factors affecting brine shrimp hatching / eq; 		
	2. a named environmental factor may fluctuate / eq;	2. e.g. temperature, pH, light intensity, oxygen concentration, mineral concentration IGNORE nutrients	
	3. suitable reference to difficulty of counting / eq;		
	4. an example of a possible limitation ;	4. e.g. viability of eggs / species of brine shrimp / genetic differences / damage to eggs	(3)
