Morning (Time: 1 hour 30 minutes)

Paper Reference **WPH01/01**

Physics

Advanced Subsidiary

Unit 1: Physics on the Go

You must have:

Ruler, protractor

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this paper is 80.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- Questions labelled with an **asterisk** (*) are ones where the quality of your written communication will be assessed
– *you should take particular care on these questions with your spelling, punctuation and grammar, as well as the clarity of expression.*
- The list of data, formulae and relationships is printed at the end of this booklet.
- Candidates may use a scientific calculator.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Pearson

SECTION A

Answer ALL questions.

For questions 1–10, in Section A, select one answer from A to D and put a cross in the box . If you change your mind, put a line through the box and then mark your new answer with a cross .

1 Which of the following quantities could have units of Nm s^{-1} ?

- A gravitational field strength
- B gravitational potential energy
- C power
- D work done

(Total for Question 1 = 1 mark)

2 The equation $\Delta W = F\Delta s$ can be used to calculate the work done on an object by a force. Each quantity in the equation can be described as either vector or scalar.

Select the row from the table that correctly describes each of the quantities in this equation.

	ΔW	F	Δs
<input type="checkbox"/> A	scalar	vector	scalar
<input type="checkbox"/> B	scalar	vector	vector
<input type="checkbox"/> C	vector	vector	scalar
<input type="checkbox"/> D	vector	vector	vector

(Total for Question 2 = 1 mark)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- 3 A spring is suspended from a bar. A load of 2.5 N is added to the free end of the spring and the spring extends by 4.0 cm.

The load is increased to 10.0 N and the spring extends by a further distance x .

What is the value of x ?

- A 4.0 cm
- B 8.0 cm
- C 12.0 cm
- D 16.0 cm

(Total for Question 3 = 1 mark)

- 4 A student takes measurements to determine the density of a metal in the form of a long, thin wire.

Which of the following gives the equipment he should use?

- A Top pan balance, metre rule and micrometer
- B Top pan balance, metre rule and Vernier callipers
- C Top pan balance, micrometer and Vernier callipers
- D Top pan balance and Vernier callipers

(Total for Question 4 = 1 mark)

5 A box is pulled up a ramp using a rope as shown. The box moves at a constant speed.

The forces acting on the box are:

W = weight of box

F = frictional force of ground on box

T = tension in rope

R = normal contact force of ground on box

Select the diagram which represents the free-body force diagram for the box.

- A
- B
- C
- D

Questions 6 and 7 refer to the experiment described below.

A student drops small solid spheres through a liquid of viscosity η in a measuring cylinder.

- 6 A small sphere of volume V falls at terminal velocity through the liquid.
A larger sphere of volume $8V$ is made of a different material. The larger sphere falls through the liquid at the same terminal velocity.

The frictional force acting on the small sphere is F .

Which of the following is the frictional force acting on the larger sphere?

- A $512F$
- B $8F$
- C $2F$
- D F

(Total for Question 6 = 1 mark)

- 7 If the liquid is cooled, the terminal velocity of the spheres would change.

The terminal velocity of the spheres would

- A decrease because η would decrease.
- B decrease because η would increase.
- C increase because η would decrease.
- D increase because η would increase.

(Total for Question 7 = 1 mark)

Questions 8 and 9 refer to the information below.

A ball is dropped and is caught after the first bounce.

8 The ball takes 1.6 s to reach the ground.

From what height was the ball dropped?

- A 7.8 m
- B 13 m
- C 16 m
- D 25 m

(Total for Question 8 = 1 mark)

9 Which of the following is the velocity-time graph for the motion of the ball?

A

B

C

D

- A
- B
- C
- D

10 Two liquids of different viscosities flow through identical pipes.

If the conditions are identical, the liquid with the lower viscosity will

- A flow at a lower speed and transfer a smaller volume of liquid per second.
- B flow at a higher speed and transfer a greater volume of liquid per second.
- C flow at a lower speed and transfer a greater volume of liquid per second.
- D flow at a higher speed and transfer a smaller volume of liquid per second.

12 Two students carry out experiments to measure the acceleration of free fall. In each experiment a ball bearing is dropped through a known distance and the time taken is measured.

Student A drops the ball bearing and starts a stopwatch. He stops the stopwatch when he sees the ball bearing reach the ground. The stopwatch measures to the nearest 0.01 s.

Student B uses an electronic system that releases the ball bearing and simultaneously starts a timer. The timer stops automatically when the ball bearing reaches a sensor. The timer measures to the nearest 0.001 s.

State and explain two reasons why the method used by Student B is better for this experiment.

(Total for Question 12 = 4 marks)

13 A crane is used to remove an object from the bottom of a lake.

The object is a cylinder of height h and the depth of the lake is D , as shown in Figure 1.

The cylinder is moved vertically through the water at a slow and steady speed. The cylinder comes to rest in a position where it is completely above the surface of the water, as shown in Figure 2.

The diagrams are not to scale.

Figure 1

Figure 2

The graph shows how the tension in the cable varies with distance as the cylinder is lifted from the bottom of the lake to its position in Figure 2.

(a) State expressions for the distances P and Q .

(2)

18 In the sport of pole vaulting, a long flexible pole is used to lift the athlete up over a crossbar, as shown in the diagram.

The athlete runs down the runway at high speed and places the end of the pole in the vault box. The pole bends then straightens, moving the athlete upwards. At the maximum height the athlete lets go of the pole.

(a) Explain how using the pole enables the athlete to reach a greater height than by jumping.

Your answer should be in terms of the energy transfers involved.
