Physics

International Advanced Level

UNIT 6: Practical Skills in Physics II

You must have:
Scientific calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- **Show all your working out in calculations and include units where appropriate.**

Information

- The total mark for this paper is 50.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- The list of data, formulae and relationships is printed at the end of this booklet.

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

E:1/1/1/

Answer ALL questions.

- 1 A wire-wound resistor can become hot when there is a current in it. This heating effect can be investigated using the apparatus shown.

A student investigated whether the temperature rise of the water $\Delta\theta$ was proportional to the current I in the resistor. For each value of current, the student refilled the beaker with water at the same initial temperature.

- (a) (i) Identify two other control variables for this investigation.

(2)

.....

.....

.....

.....

- (ii) The student recorded the following data.

I/A	1.5	2	2.5	3
$\Delta\theta$	3.5	7	9.5	15

Criticise the recording of this data.

(3)

.....

.....

.....

.....

.....

.....

- (b) Explain one improvement the student could make to reduce the uncertainty in the measurement of $\Delta\theta$ for each value of I .

(Total for Question 1 = 7 marks)

- 2 A pendulum of length l swings in a vertical plane. The string hits a peg placed at a distance h vertically below the point of suspension as shown. This makes the pendulum shorter for part of its motion.

- (a) Determine the time period T for the whole oscillation when $h = 0.25$ m.

$$l = 1.00 \text{ m}$$

(3)

$T =$

- (b) A student suggests that an approximate relationship between T and h is given by

$$T^2 = \frac{\pi^2}{g} (2l - h)$$

Devise a plan to test the validity of the relationship using a graphical method.
Include the use of a stopwatch and any additional apparatus as required.

(6)

- (c) Another student suggests determining T by setting up a light gate attached to a data logger.

Discuss whether this modification would improve the investigation.

(3)

(Total for Question 2 = 12 marks)

BLANK PAGE

- 3 A student investigated standing waves using the apparatus shown.

The signal generator was adjusted until a loud sound was heard at a particular frequency, known as the resonant frequency.

- (a) Describe how the student should use the oscilloscope to identify the resonant frequency and determine its value.

(4)

.....

.....

.....

.....

.....

.....

.....

.....

- (b) The student reduced the volume V of air inside the bottle by adding known volume of water. He recorded the following values of the resonant frequency f for each value of V .

V / cm^3	f / Hz		
576	221		
476	244		
376	275		
276	323		
176	408		
126	485		

- (i) Plot a graph of $\log f$ against $\log V$ on the grid opposite. Use the additional columns in the table to record your processed data.

(6)

- (ii) It is suggested that the relationship between f and V is given by

$$f = kV^{-\frac{1}{2}}$$

where k is a constant.

Discuss whether the graph supports this suggestion.

(Total for Question 3 = 15 marks)

- 4 An L-shaped steel rod was held horizontally in a stand clamped by its shorter end as shown.

The end of the steel rod was at a height p above the bench.

A student attached a mass m to the end of the steel rod causing it to bend towards the bench. The end of the steel rod was then at a height q above the bench.

- (a) (i) Describe two techniques she should use when measuring p and q .

(2)

- (ii) The difference between p and q was recorded as $26 \text{ mm} \pm 1 \text{ mm}$.

Explain why the uncertainty in this value is given as 1 mm.

(2)

(b) The steel rod had a circular cross-section with a diameter d of approximately 2 mm.

(i) Explain the most appropriate instrument the student should use to measure d .

(2)

(ii) Explain one technique that she should use to measure d .

(2)

(iii) She recorded the following measurements.

d/mm				
2.35	2.37	2.34	2.35	2.33

Calculate the mean value of d in mm and its uncertainty.

(2)

Mean value of $d = \dots\dots\dots \text{mm} \pm \dots\dots\dots \text{mm}$

(c) The shear modulus G is a measure of a material's resistance to bending, and is given by

$$G = \frac{32mglx^2}{\pi yd^4}$$

where m is the mass attached to the end of the rod and y is the vertical deflection.

l and x are the lengths as shown below.

Diagram not
to scale

Determine a value of G for steel in Nm^{-2} .

$m = 100 \text{ g}$ with negligible uncertainty

$l = 58.9 \text{ cm} \pm 0.1 \text{ cm}$

$x = 10.3 \text{ cm} \pm 0.1 \text{ cm}$

$y = 26 \text{ mm} \pm 1 \text{ mm}$

(2)

$G = \dots\dots\dots \text{Nm}^{-2}$

(d) The table shows values of G for different types of steel.

Type of steel	Structural steel	Carbon steel
$G/10^9 \text{ N m}^{-2}$	79.3	77.0

Deduce whether the data provided in part (c) would allow the student to determine the type of steel the rod was made from.

(4)
